The non-Russian nations and the satellites are conducting an acute struggle against communism. One must not forget that whereas the masses of the Russian people are oppressed socially and suffer from the Communist dictatorship, the non-Russian nations are additionally subject to Russian colonial imperialism. This imperialism is manifest n a destructon of national ranks in the non-Russian republics on charges that they desire separation from Moscow. This is pointed out by the well-known student of the national question in the U. S. S. R., Walter Kolarz in his study Russia and Her Colonies published in London in 1952. I quote: "The non-Russian peoples lost two sets of their national elite during the period stretching from the October Revolution until roughly the outbreak of the Second World War."

Naturally, for this policy of the Soviet government the Russian people cannot be held responsible alone, because it is unthinkable that the masses of the Russian people would have an interest in subjugating other peoples. It is nevertheless a fact that the Kremlin is making the Russians the dominant nation of the U. S. S. R.

It is not surprising that under these circumstances the sharpest resistance to Communist Moscow is offered by the non-Russian republics of the U. S. S. R. and by the satellites. That is where the disturbances first started after Stalin died. Returnees from Soviet concentration camps likewise point out that the largest numbers of concentration camp inmates are non-Russians and that underground movements are still active among the non-Russian peoples. As late as December 1954 deportations of the population were conducted from several provinces of Ukraine to Siberia for collaboration with the underground. Thus, the national struggle in the U. S. S. R. and in the satellite countries is the most explosive antiregime power behind the Iron Curtain. In order to counter this threat, Moscow makes use not only of terror, but also attempts to gain to her own side the non-Russian nations by partial concessions. This is particularly noticeable in Ukraine, Byelorussia, and the Caucasus. The purpose of all this activity is but one: To convince the non-Russian nations by psychological warfare that their only chance is to go along with Moscow, and that the West, and particularly the United States is their chief enemy.

Another factor of the present crisis in the U. S. S. R. are economic difficulties. Their essence lies in the fact that, first of all, the Soviet economy which is of the military type and geared to development of heavy industry and armaments, is unable to satisfy the needs of the population. There is a great disproportion between heavy industry and the light and agricultural industries. In 1954, when the total amount of capital investment in industry amounted to 216.5 billion rubles, the share of light and food industry was only 14.35 billion rubles. Between 1940 and 1952 the total output of Soviet industry increased by 230 percent while that of agriculture increased by only 10 percent. Hence, according to data published by Soviet researchers themselves, citizens of the U. S. S. R. consume only 30.4 percent meat, 19.5 percent milk and 18.3 percent eggs of what they should be consuming, because these articles are either not available in sufficient quantity, or they are beyond reach in price. Whereas in 1928 there were 19 cows for every 100 people in the U. S. S. R., in 1941 there were 16, and in 1954 only 13. The population of the U. S. S. R. increased between 1928 and 1953 from 150 million to 215 million.

The Kremlin saw a solution of the crisis in agriculture mainly in increased mechanization and cultivation of new virgin lands. But here the human factor was a disappointment and this is the gist of Soviet economic difficulties. Under conditions prevailing in the U. S. S. R. the people have no incentive for laboring in virgin lands. They come to work late, they protest against overtime work, they have no concern for the collective property and instead concentrate their attention upon their own garden plots. The Soviet press reports instances of negligence on the part of Soviet peasants and workers every day. What is more, the press sometimes mentions cases which could be considered direct sabotage of the Soviet authorities and wide resistance on the part of the masses. The Soviet press records instances when collective farm workers refuse to accept a bureaucrat sent down by the party and elect their own people to managerial positions. It is interesting to note that mass repressions are not administered for this. When we add to this strikes in concentration camps, the existence of an underground in the non-Russian republics and finally instances of raids by the so-called armed bands upon military installations, as reported in Krasnaya Zvyezda, the picture becomes more complete.

What does it mean? Does it mean that the U. S. S. R. is on the eve of larger internal disturbances? No. Under present conditions it would be impossible. But it does mean that the dissatisfaction of the popular masses in the Soviet Union is growing and that the masses are ready to fight for their rights. It also means something more: Whereas during a period of some years after the war the liberation struggle in the U. S. S. R. went on primarily in underground and insurgent form; today it has been replaced by opposition of the widest masses. This would also be an answer to the question posed earlier, as to whether the present liberation struggle behind the Iron Curtain has any chance of success.

What are the conclusions for the free world to draw from these conditions behind the Iron Curtain?

The first conclusion is that to the extent that Russian communism and imperialism constitutes today a mortal threat to the free world and prepares for its conquest, the existing liberation struggle of enslaved nations in the U. S. S. R. is in direct interest of the free world. The second conclusion is that, if the Soviets succeed in breaking the

resistance of enslaved nations, they will be ready for aggression against the West. This has been clearly stated by Secretary of State John Foster Dulles in his address to the United States newspaper editors on April 18, 1953, in the following words: "The hardest task of the Soviet rulers is to beat this disunity into Communist conformity. If that can be done, then the menace of Soviet communism will be immeasurably increased."

What is to be done in order to forestall such an increase of the menace of Soviet communism?

First of all we must realize that this menace will continue to exist as long as the source of aggression exists, that is the ruling oligarchy in Moscow. The entire experience of the free world with Communists proves that they will never give up their aims of world conquest.

Does this mean that in order to free itself from the menace of communism and to aid the enslaved peoples gain their freedom the West would have to wage war? No. This is not a question of war, but only of active moral and political aid to all those who are waging the struggle behind the Iron Curtain.

Another matter which must be taken cognizance of is the fact that the weakest spot of the Soviet regime are its own masses, and for this reason the policy of the free world should be aimed towards those masses and not toward the oppressors imposed upon them. The free world should rather care for the friendship and sympathy of the peoples of the U. S. S. R. instead of Khrushchev's and Bulganin's. The point is that the people of the free world should declare courageously and openly that in the gigantic struggle waged by the enslaved nations of the U. S. S. R. and of the satellites against communism, the free world stands on the side of the enslaved nations, of the non-Russians, of the Russians and of the satellites and not in any way on the side of the Communist oligarchy in Moscow.

The third point to remember is the fact that a way to the peoples of the U. S. S. R. can be found only after the free world assumes a clear position in respect of the political purposes for which these peoples are fighting. This means that the nations of the free world, and the United States as their leader in particular, publicly recognize the right of each nation behind the Iron Curtain to complete national independence and the right to elect their own government according to the wishes of a majority of the population. Proclaiming its moral and political support of the enslaved nations behind the Iron Curtain, the West cannot make any distinctions among them. Freedom and national independence is the equal right of all peoples: Russians, Byelorussians, Ukrainians, Poles, Slovaks, the Balts, the Caucasians and others, that is of all those who are fighting for that freedom, and not merely of some of them.

The fourth point to remember is the practical kind of aid which can be furnished to the enslaved peoples of the U. S. S. R. even now. Why could not, even today, numerous religious, humanitarian, youth, and women's organizations in the free world and the trade and labor unions raise their voice in mass protest against holding 15 million people in concentration camps of the U. S. S. R.? Why could not, even today, mass action be organized demanding liquidation of those most horrible institutions of totalitarian enslavement of nations and people? Why are Americans travelling in the U. S. S. R. frequently asked provocative questions about the fate of Negroes in the United States, but there was not one American journalist who dared ask publicly, on the radio, or on television, of the Russians traveling in the United States, what is the fate of millions of people rotting in jails and concentration camps behind the Iron Curtain? Soviet politicians and journalists should be made to answer publicly why is it that in the U. S. S. R. there is still no freedom of speech, of assembly, of elections, and why are bishops and the clergy of the Ukrainian Catholic and the Ukrainian Orthodox Church still being persecuted, as well as those of other churches in the U. S. S. R.? Why can Molotov be the spokesman in the United Nations allegedly defending the Arabs and organizing an aggression against Israel, and no representative of the free world will rise in the U. N. and ask Molotov about the fate of Georgia, Lithuania, Poland, Ukraine, and other nations behind the Iron Curtain?

In summing up I wish to state once again: the enslaved nations of the U. S. S. R. and the satellites have been, are, and will continue to wage a struggle against their oppressors. They have a deep faith in the justice of their cause and that it will bring them to final victory which is in the interest of all humanity thirsting for freedom.

No Real Farm Solution in Sight

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 28, 1956

Mr. SCHWENGEL. Mr. Speaker, under leave to extend my remarks, I wish to call to the attention of my colleagues a recent editorial from the Davenport (Iowa) Daily Times, No Real Farm Solution in Sight, which I feel expresses the views of most of us as far as farm legislation is concerned. The editorial follows:

NO REAL FARM SOLUTION IN SIGHT

What will emerge from the Senate-House conference on the farm bill is an unknown quantity but it is certain the measure will not be designed so much as a sound relief act as one which can be used to catch votes.

The action of the Senate, of course, is fresh in mind. It brought forth a mangled bill, the results of which no competent observer would attempt to detail.

The bill includes the President's soil-bank proposal and to it are tacked amendments nullifying the purpose of the soil bank.

But in the view of the Senators supporting the bill, what does it matter? It may provide a vehicle for their reelection and to them that is the important thing.

The complexities of the measure come about largely by reason of its being written on the floor through revisions slammed through with little effort at trying to evaluate their ultimate results.

This is not the way to legislate on any matter and particularly is that true of so important an economic measure as a farm bill.

But it is an election year and that accounts not only for the kind of a farm bill passed by the Senate but a lot of other things.

The Eisenhower administration called the bill unworkable and hinted at Presidential veto.

In order to get some kind of legislation before the planting season arrives the White House has let it be known that a compromise will be accepted.

The Democrats in Senate and House will feel that the administration's announcement is surrender. Hence there is every likelihood that a hodgepodge will emerge and it is to be noted the Senate-House committee is in a hurry to act.

The New York Herald Tribune has stated the situation well. "The solution of the farm problem has just been postponed," said the Herald Tribune. "What Congress, like all Americans, must appreciate is that this is a national problem which calls for a national approach. More than the surplus is involved; we shall have to develop a policy founded on a coordinated domestic and foreign trade program, more crop diversification, research into new uses. That requires statesmanship, not the shallow partisanship in evidence now."

Tribute to a Farmer

EXTENSION OF REMARKS
OF
HON. WALTER ROGERS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 28, 1956

Mr. ROGERS of Texas. Mr. Speaker, under leave to extend my remarks, I wish to include an article which appeared in the Spearman Reporter, and was written by J. H. Nichols, a resident of the 18th District of Texas, which I have the honor to represent. Mr. Nichols' article is printed here just as it appeared in the paper, with no attempt to edit or change it. It is a tribute to a single farmer and, through him, to small farmers everywhere.

JOE SMITH IS ONE OF HANSFORD COUNTY PIONEERS—THE MAN WHO INTRODUCED THE SHOVEL, LUSH FIELDS, AND MODERN DEEP IRRIGATION TO HANSFORD COUNTY

(By J. H. Nichols)

Joe Smith pioneered one of the first irrigation wells in the county. He saw the end of the drought and the possibility of the doubling on the yield by lifting the water out of the ground, by scientifical force, to water the parched earth, instead of plowing up the soil and waiting for God to send the rain from above to make a crop. The Bible says the devil is the prince of the winds, and it seems he has tried to blow this country away, with the help of those who do not do scientific farming when the droughts are on. God furnished the land and God furnishes a reservoir for the water. He has given the human race enough knowledge to dig deep into the earth, to make the water run like a river on dry ground, to save both the soil and feed from crop failures. Work is the answer to about nine-tenths of our prayers, which are legitimate, reasonable, and sensible in this life. God has already done His part, and all we will have to do to get the blessings is to do our part. As the prophet has said, "Faith to believe that a desert will blossom as a rose." We can make the proverb come true by the energy we put in that faith. Joe Smith talked of this irrigation many years before he put his faith into practice. His actions and a bumper crop is the answer to his faith. If we could do the praying and let God do the work overproduction would be all we could hear. In that case, the human family would have nothing to do, to even make them think, to work to the end of their faith to save the soil and produce a crop, when the parching winds continue to dry up a crop by blowing the silt away and leaving this country as a barren desert.

When Joe Smith put on a demonstration that it can be done, many other farmers said, "If he can do it, we can too." Every project which has been advanced, for the glory of God and the good and safety for humanity, someone had to have the vision

and the energy to pioneer into a new field to prove it can be done. This county owes Joe Smith a standing vote by thanks for having a vision to see and show that crops can be made here, by using mechanical devices, instead of paying Dr. Crick money to disturb the elements and try to bring the rain, which he never done, and I don't believe he ever will. There were farmers in this county who put in money to him, that I would have thought they would never have given a nickel to see the Statue of Liberty turn a handspring.

Joe put his money in a hole in the ground where he knew the water was, and he put his money in an engine to pump the water out. He stayed with the irrigation ditches to see that the water was properly spread over the ground to produce a crop, which made even those who said, "It cannot be done" sit up and take notice. A proven fact needs no argument it will work. This irrigation is like the wind, it is here to stay. The Panhandle of Texas and Oklahoma could feed the world, with the cooperation of men with faith and energy to put that faith into practice. As the irrigation crops produce more food, it will automatically put more people to work. Too many people have gone broke waiting for a next year's crop, and the next year has been postponed until they could not hold on any longer.

It has been my good pleasure to visit demonstrations stations, county fairs, State fairs, and world fairs in different States and cities. The greatest yield ever made on an acre of cotton, was done by a colored man in the State of Georgia. He said the cheapest labor he could hire to produce the best and biggest yield for his crop was fertilizer. He himself furnished the steel dust and sweat to make that fertilizer take hold, to show what it could do with the cooperation of a farmer who did his part. The cheapest labor that can be employed on the plains, is water to make the soil settle down and keep it out of the air. God has left this project in the hands of His people, so if they neglect the importance of irrigation, they will have to suffer for it with lean crops and empty breadbaskets. Man, by the help of God, can assist nature but they cannot change nature. Those who have led the way in any project, which has saved the day and blessed humanity, had to have first: Faith and energy to put that faith into practice and financial backing to put the proposition over.

It has been my good pleasure to visit Joe's irrigation project from the time he started it, until he had demonstrated to the people in the county, that irrigation is the only sure way to produce a crop every year, with no complete crop failures. Man can utilize what God has put here for his success and he can stay here with the assurance, he will always have something to live on. This project will save the situation of an overcrowded population. It will put more people to work on the farms and more people can live off of less acres. Now we see irrigation wells all over the county and many of the adjoining counties. There is not a doubt in my mind, irrigation is the only salvation for the farmers. Work is the answer to a reasonable and workable prayer. Work is the answer to a successful farmer. Work will turn a desert into a breadbasket of the world. When the desert begins to blossom like a rose, then is when the work is being done by people who have vision and by those who know the possibilities are here. It is up to the farmers to harness and develop these possibilities, so it will help the people to help themselves, with the help of God, and to take care of God's children. Amen. A successful farmer doesn't do his farming on paper. He doesn't plant his seed in the signs of the moon. He puts his seed in the ground in season. The Bible tells of seedtime and harvest, summer and winter, heat and cold. The successful farmer knows he must do his farming in season. To be a successful farmer requires as much scientific knowledge on farming, as it does a doctor or any other scientific man to succeed.

The man who can succeed and make a success on the farm, can make a success at any other business in life. Good farmers know that work is the answer to what it takes to make a good crop, and to take care of it when it is ready to harvest. It is one thing to be a good farmer, and another thing to be a "drugstore farmer" or to live on a farm. The best farmer raises something to take to town with him to sell, instead of going to town to bring something back with him to live on. What I mean, he has something to meet the medium of exchange from the city to the farm, to keep both the farmer and the city people fed and at work and he has something to pay for the products it takes to run the farm. This is logical and reasonable both to the producers and the consumers. The farmer is the backbone of the world, but he has to have the manufacturer to make him the best farmer, which he can possibly be, in his chosen profession. The best farmers we have is not only the best producer in the community, but he is the best preserver of the soil. He builds it up instead of wearing it out.

Joe was telling me what the banker told him when he left Oklahoma. He said, "When you get to Texas, if you can make a good crop be sure to lay back enough seed to plant the next crops. There is no telling how many crop failures you will have." This was good advice, but Joe did not need it. He prepared for the drought. If that banker should come up at harvesttime he would say, "Joe, fill that quonset, I want to send my customers up to buy maize seed, to plant their next crop so they can pay the note off from the expense of the last crop they failed on." He shows the banker he does make a bumper crop, when other crops are a failure in this section. He has done it by his skill and judgment to run the pumps day and night and to move the irrigation tubes when they need to be put on a dry row. Any man who makes a success in life will give his good wife credit for keeping his feet to the fire and urging him on when the going was rough and tough.

Any man who appreciates a master farmer that handles his farming like an artist who is painting his masterpiece by giving it the finishing touch, would appreciate the cultivation and the crops which Joe Smith is the master of. I know good farming when I see it, for I have experienced that type of work myself. Any man can tell a first-class farmer by looking at his crop, if it is only by driving by the farm and taking a glance as you pass by or should you come to a standstill and see the grain pour from the spouts of the combines. I have never seen any farmer in my life who does any cleaner farming than our friend, Joe Smith. In his conversation to me, he said, "It take as much water and work to produce a weed as it does a stalk of maize, and the maize looks so much better to me." This practice will show up as well on the bank account, as it does to the eye of a good farmer. Any man with the right appreciation would have to take off his hat to Joe for the magnificent job he does in farming. There are two alternates to his good farming; he knows what to do and secondly, he does it without hesitation. A man has to think to be a good farmer, but he has to work to make his thoughts come true by the abundant production which is a reality to him at harvest time. To be a worthwhile success in any profession, we would have to give the right answer and credit to work.

I am not taking this opportunity just to blow Joe Smith up as a balloon on farming, that he might have a chance at a Government job. He doesn't want Benson's job as Secretary of Agriculture. There is not a doubt in my mind, if Benson could follow Joe through a season, he could come out with some good points on farming he has never known about or overlooked them. We have many good farmers in this country. This tribute of respect is a blanket praise for all the farmers who have stayed through droughts, panics, dust storms and succeeded because of the grit and energy they possessed to stay on, in spite of opposition. Everywhere the people are looking to the Panhandle of Texas and Oklahoma to feed them. I was in an elevator and the manager said, "This maize is going to India and they will use it for bread." The possibilities in the Panhandle are unlimited on agriculture. With the oil and the manufacturing plants that will come here in the future, will go to make this community as Laura V. Hamner has said, and I quote: "The grandest spot on earth." Her faith has been such through the years. We, who live here cannot fully appreciate this country until we go through other sections of the country, and see some of the things they are deprived of, that we enjoy here. Man has not made the country, but this country has made men who are outstanding, by showing them what this country can do for a man who will stretch out the arm of faith and take hold of the opportunities.

We are just on the threshold of one of the greatest developments on oil and gas of any section in the world. With the progress of agriculture and the natural resources developing, we can see this country or rather expect to see, in the future, this country to settle up like many of the countries who too were crowded out, and then see anyone have a fair share of what God had blessed the Panhandle with. Each individual will have the opportunity to live and prosper with all the good things which God had deposited here for the good of mankind. Ranchers and agriculturists have paved the way for all the progress we have here in the Panhandle of Texas and Oklahoma. Texas and Oklahoma are twin sisters on progress and the development of the West. Those who pioneered into a new country deserve a claim for what they have done, by the hardships they endured and was willing to endure, that we would follow in their tracks to take up the torch where they laid it down. They made it possible for this great agriculture I have been talking about. In looking for the best wheat land and the finest cattle in the world, all a man would have to do is to turn the spotlight on Hansford County and he would find both.

It has been my good fortune to be in most of the different States in the Union and this country stands out with beckoning hands and outstretched arms, to welcome men with vision, faith and energy to develop one of the most wonderful spots in the world, for the progress and growth, to have the best things for the comfort and safety of the human race. We face it here. We are fortunate to be here whether we believe it or not. Amen.

We Didn't Get Much

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 28, 1956

Mr. SCHWENGEL. Mr. Speaker, in the March 22 issue of the Tipton (Iowa) Conservative, appeared an editorial, "We Didn't Get Much," which sums up the situation pretty well with respect to

farm legislation as of this moment. I commend it to my colleagues. The editorial follows:

WE DIDN'T GET MUCH

The problem of how to get a satisfactory farm bill is not yet solved.

Nobody is happy about the job the Senate did during the last month. As a farm bill it is a collection of odds and ends, of compromises and adjustments; the product of pressure groups and politics.

Into the proposed farm program went all the prestige of the Republican administration. After impressive opening victories, the administration's plan was twisted out of shape by the pressure groups. What resulted was intended to please everyone. Instead, it pleased nobody. And no political group gained any political advantage.

Pressure came from all sorts of places. The votes of the seaboard States killed a plan to open up the shipment of surplus foods overseas.

This was the bill to allow food to be moved by ships of any nation. The seacoast States insisted that half must go by American ships.

The Farm Bureau made a considerable effort to get this plan across. But it failed because maritime interests wanted the food to go on American ships. As a result it will not be possible to export surplus food that could, otherwise, have been sent overseas on the ships of purchasing nations.

The Farm Bureau did get across a point in its program that has been needed for a long time. It is now required that farmers put land in either the acreage reserve or conservation reserve in 1957 and later years if they want price props.

Control of the diverted acres is now becoming a possibility.

This idea had been fought by Secretary of Agriculture Benson and the administration. A year ago the freedom to turn land taken out of support crops into the production of feed crops helped to ruin the pork and beef market.

As much as anything else, this failure to control diverted acres has contributed to the mounting surplus of meat.

This experience by the Farm Bureau in losing one fight and winning another is typical of all of the forces involved in the farm program.

The result, as Senator BOURKE HICKENLOOPER described it, is a "hodgepodge."

It would have been better to have gone one direction or another, rather than go all directions at once.

The farmer, who must now be completely bewildered by what Congress proposes to do, cannot go ahead with his spring plans with any assurance as to what form the final farm bill will take. H. E. C.

Defense and Indifference

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 28, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Stewart Alsop, from the Washington Post of March 28, 1956:

MATTER OF FACT
(By Stewart Alsop)
DEFENSE AND INDIFFERENCE

Some very sensational statements have recently been made by the highest Air Force authorities, but hardly anybody has paid any attention to them at all. Consider the following brief samples.

Gen. Nathan Twining, Air Force Chief of Staff:

"The Soviets have long since passed us in quantity and they are making remarkable strides in quality."

Gen. Thomas D. White, Deputy Chief of Staff:

"They have been and are outproducing us in all categories but medium bombers * * *. Here is the area of deep concern—the Soviets are presently beating us at our own game—production * * * the Communists are making scientific and technological advances at a faster rate than we are."

Lt. Gen. Thomas S. Power, chief of the Air Research and Development Command: "With both quantitative and qualitative superiority on their side, we would lose the protection of the deterrent force and be at their mercy. This danger is very real and immediate."

What all three generals are saying, of course, is that the Soviet Union is rapidly outstripping the United States in strategic air power, the one field in which this country has heretofore enjoyed superiority. Surely it is no exaggeration to describe such warnings as sensational. Surely an official warning of a very real and immediate danger that this country will be at the mercy of the Soviets, for example, is nothing if not sensational.

Yet such warnings are met these days with a long, bored, national yawn. Why?

The question is worth asking, because the national indifference to such warnings is a vitally important phenomenon. There appear to be a number of interlocking answers.

In the first place, there is a tendency to regard all generals as professional cryers of "wolf, wolf."

Certainly the services have sometimes been guilty of budget-minded scare-mongering. Yet, as General Twining pointed out in his testimony, the Air Force has consistently underestimatcd Soviet progress in air power, and by a very large margin, rather than the other way around.

Then there is the theory that they don't really know—they're just guessing. The theory is comfortable, but incorrect. When Twining testified recently that the Soviets were producing more than twice as many long-range bombers as this country, and that they were already testing intermediate range missiles, he was not guessing. He knew. How he knew may be none of the public's business. But the facts themselves are very much the public's business.

There is the equally comfortable theory that "We can't do anything about it anyway," which is equally incorrect. Assistant Secretary of the Air Force Trevor Gardner resigned essentially because of an official decision not to undertake the "crash" missile program he proposed. By the same token, to increase our long-range bomber production at least to the Soviet level, as Gen. Curtis LeMay has strenuously advocated, would require a simple order to the Boeing plants. The order has not been given, entirely for budgetary reasons.

The plain fact is that the American Government has officially decided to permit the Soviets to outstrip this country in strategic air power. Many people refuse to worry about this decision because Dwight D. Eisenhower is head of the American Government. Gut General Eisenhower's military experience was in a different field, and he himself has often disclaimed personal infallibility.

The President's military reputation is, of course, a major reason why the administration's defense policies have been so mildly criticized. Those who undertake to do so, like Senators STUART SYMINGTON and HENRY JACKSON find themselves charged with "breaking security" becoming "prophets of gloom and doom," or simply playing politics. Critics of defense economies are also accused of wasteful warmongering since "there won't be another big war anyway"—which could be true, but only if we do not "lose the protection of the deterrent force."

But all this is not enough to explain the extraordinary public apathy in the face of such sensational warnings as those listed above. Unless the country has become so flabbily self-regarding as to be indifferent to the future, there must be something else as well—a failure of communication between the Nation as a whole and those responsible for national security. As another report in this space will suggest, the failure seems to center in the system which has grown up around the august, highly secret National Security Council.

The Sadlak Success Story

EXTENSION OF REMARKS
OF
HON. HORACE SEELY-BROWN, JR.
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 28, 1956

Mr. SEELY-BROWN. Mr. Speaker, I am pleased and proud to insert in the Appendix of the RECORD a story recently appearing in the Meriden (Conn.) Journal, entitled "The Sadlak Success Story." This story will be of interest not only to Congressman SADLAK'S many friends here in the House, but also to all of those in Connecticut whom he has so faithfully served during his tenure of office as Congressman at Large.

THE SADLAK SUCCESS STORY
(By GEG)

One of the most underestimated vote-getters on the Connecticut political scene is Congressman at Large ANTONI N. SADLAK, the Republican incumbent from Rockville. He has made life easier for the State Republican leadership since his advent on the political scene in 1946. Since then the GOP leaders have had little concern for Mr. SADLAK'S ability to retain the prized seat in Congress. He had but 1 narrow triumph during his 5 consecutive terms, that happening in the 1948 presidential election when his plurality, for some mysterious reason, dived to an alltime low of 3,963 votes. It proved to be a complete mystery because in his initial bid just 2 years before he had walloped his Democratic opponent by a plurality of over 100,000.

Several reasons for Mr. SADLAK'S popularity at the polls have been advanced over the years. One contention is that he is truly devoted to his constituents. If he has pledged to speak before a group, whether 50 or 500, he's Johnny-on-the-spot, and usually carries away his audience with a vigorous talk on assorted political issues. Another is that he has won nearly 100-percent support from the postal workers of the entire State. In that respect, veteran Democratic voters continuously cross party lines in Mr. SADLAK'S behalf, which unquestionably contributes to his amazing pluralities. He was the only Member of Congress from the New England States serving on the Post Office and Civil Service Commission for 4 years, which may provide an insight as to why he has the unqualified support of postal employees.

Of prime importance to his successful career as the State's representative-at-large has been the service he rendered as executive secretary to former Congressman at Large B. J. Monkiewicz. That proved to be the incubator for his approach to the problems of his constituency. It is a constituency which is not confined to any specific

district. He serves in the same capacity as both United States Senators, but without their portfolio. Since he has shown this exceptional ability to win 5 consecutive terms there has been speculation about his possible attempt to win a Senate seat. In that respect he has not shown his hand, publicly or otherwise, but appears content to retain his present position. Opinion on that, too, is divided. Some think he should ultimately make the run, while others hint he has developed a successful formula which should not be extended too far.

The Democratic leadership over the years has tried many theories in overcoming Sadlak's hold on the position. They have attempted to counter the inroads he usually makes in the cities which are predominently Democratic by nominating candidates of the same national origin. But this last effort failed miserably, providing Mr. Sadlak with a rousing 111,593 vote plurality. Now the Democrats have learned to recognize his strength as one who cannot be easily unseated by any of the usual means. It now has progressed to the point where his political rivals merely wait for some unexplained political turn of events to overthrow him.

Mr. SADLAK'S victories have stumped his opponents. Republicans managed to place Connecticut in the Republican column during the 1948 election with ex-Governor Thomas Dewey as the presidential candidate. At the same time the State government offices were won by the Democrats, led by former Gov. Chester Bowles. While the pattern of vote splitting was apparent on the presidential and gubernatorial candidates, Mr. SADLAK won his second term by defeating Democratic nominee Trotta of New Haven by nearly 4,000 votes. In the 1952 election, with Preident Eisenhower leading the way, he piled up his heaviest plurality. Last year he contended against Joseph Lyford, a highly capable candidate who previously served former Governor Bowles as press secretary. The outcome apparently was never in doubt, despite Mr. Lyford's all-out campaign against Mr. SADLAK'S voting record.

The newly adopted primary law in the State isn't expected to affect Mr. SADLAK'S fortunes in Republican circles in the least. There is little prospect that his nomination will be seriously challenged. But where the new legislation could make a difference is in the Democratic camp. For several years the Democratic chieftains have used the Representative at large nomination as a bargaining medium, usually to pacify elements eliminated for other nominations. The primary law is bound to change that situation somewhat in Democratic ranks. In the event a primary contest develops, it will only tend to divide segments of the party. The net result will probably favor Mr. SADLAK'S reelection. He remains unchallenged as the one Republican who can show an unblemished record as a piler-uper of pluralities.

The Negro and the Destiny of Democracy

EXTENSION OF REMARKS
OF
HON. CHARLES C. DIGGS, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 28, 1956

Mr. DIGGS. Mr. Speaker, consent is requested to include in the RECORD the following address, which I made over the NBC network on Thursday, March 15, 1956, on the occasion of Newspaper Week, sponsored by the National Newspaper Publishers Association. The address follows:

With each of the participants on this broadcast, I share a deep feeling of responsibility in being invited to express views on a matter crucial to American welfare. The press is the pulse of the life of any democratic nation and its expressions record the beat and ebb of that life.

There is a gripping tie between this matter of freedom of the press and its functions and the destiny of the Negro and democracy. Despite those who would deny it, we need only glance through any American newspaper to become certainly informed that the Negro and democracy's destiny, entwined for some 300 years, has come to the inevitable crisis. Whether or not democracy will arise from its bed of crisis and live to walk among the free people of this earth and strengthen itself by drawing to it the uncommitted peoples who form three-fourths of the world's population, depends upon the choices it makes today and in the months ahead concerning the Negro and the pattern of human relations it adopts with them and, consequently, takes to itself.

From the freeing of the slaves through the executives proclamations and judicial and legislative mandates of our day, Negroes have taken their battle for freedom always to the law of the land embodied in the Constitution. This is why America's pattern of human relations applying to Negro citizens is of such concern to the rest of the world. They know that this pattern is evidence of the legal operation of the laws of democracy.

Negroes ask for such things as the right to vote, protection from mob violence, the opportunity to obtain education, employment, and housing without facing bars based solely upon color of skin. The answer of those who hesitate to make their choice in favor of democracy has been that most of these are guaranties already existing in our Constitution and the case law of the Nation. This may well be true, but many of these guaranties as now spelled out are ambiguous and capable of interpretation which is guided by personal bias and interest.

At this crisis in American human relations, we are in a general election year. Daily events communicate to the world through national and international press that 300 years is too long for a democratic nation to tolerate slavery or subjugation in any degree and now a choice of principles must be made. The representatives and guardians of the American way of life—politicians in their partisan activities in executive chambers and legislative halls—have no alternative but to uphold the democratic form of government or reject it in the face of the world. There is no middle course when one has arrived at the point of fundamentals. They choose a course of no return when, as representatives, they deny the requests for legislation to correct abuse of democratic principles and enforce its concepts. Our newspapers, the white and the Negro press, have made it certain that the vast majority of Americans know these requested mandates are necessary and needed now. The Democratic Party has been the leader of democracy's cause, but it is now subjected to legitimate criticism because of equivocating actions of some of its present leaders. The Republican Party, although pursuing the course of action initiated by its predecessors, is certainly not being creative in the field of civil rights and is not following through vigorously with the kind of leadership that the executive branch can follow; nor have their congressional responsibilities been fulfilled. These responsibilities must be fulfilled as representatives of our form of government chart America's destiny in the next few months as a democratic nation and a leader of men of the world. Those affected and concerned with civil rights should keep this in mind and withhold support from any individual candidate, regardless of his party, who fails to take a positive stand on this vital issue.

Pan American World Airways Pioneers Again

EXTENSION OF REMARKS
OF
HON. ISIDORE DOLLINGER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 28, 1956

Mr. DOLLINGER. Mr. Speaker, it is interesting to note that one of our international air carriers is keeping abreast of the electronics age—or perhaps I should suggest that the electronics age is keeping up with our pioneer international airline.

We are well aware of the pioneering of Pan American World Airways in inaugurating service to Latin America in 1928, across the Pacific in 1935, across the Atlantic in 1939, and 'round the world in 1947.

Now it develops that the problems of handling airline reservations with a minimum margin for error have become so complex that mechanical assistance is necessary.

Pan American sells a ticket every 5 seconds of every working day. Hundreds of cargo waybills are issued every hour. In anticipation of the approaching jet transport era, which Pan American will introduce internationally in 1958, that airline has put into operation large-scale electronic data-processing machine accounting, product of IBM.

Mr. Speaker, I believe that this information will be of interest to this body generally, and to the Interstate and Foreign Commerce Committee particularly. Under leave to extend my remarks, I include in the RECORD a speech entitled "The Magic Lamp of Industry," recently delivered by Mr. John S. Woodbridge, comptroller for Pan American World Airways, before the IBM Seminar of Airline Executives, in Poughkeepsie, N. Y.:

The fiscal nature of international air transportation has become so fantastically complex, and the documentation so volatile and negotiable, that ordinary methods of accounting and statistical control no longer suffice. The immense and explosive volume of the larger air carriers poses a very real managerial decision as to the further forced feeding of the bookkeeping juggernaut as opposed to the introduction of an entirely new pattern of fiscal handling made available by electronic data-processing machines.

Complicated tickets sold every 5 seconds of every working day by and for our company alone, hundreds of interline air waybills issued every hour, inventories carried in astronomical figures in many different parts of the world with huge individual item costs, operating bases widely spread, all to be magnified with the approaching jet civil air transport age, have driven Pan American World Airways into large-scale electronic data-processing machine accounting, and one of the first 705-type machine units is now being placed in operation at the company's general accounting office in New York City.

We will address ourselves here to a discussion of this type of machine, this Aladdin's "magic lamp of industry," and why we have decided to incur the heavy cost of humidity control, air conditioning and other necessary installation, the large rental expense and the immense difficulties of using it intelligently and effectively.

Demands for speed, precision, and fullness of information, coupled with demands for economy, when applied to Pan American's enormous volume, have forced us into advanced automation for our accounting needs, through these large-scale electronic data-processing machines. The saturation point of our records and controls has been reached, even though our accounting has been refined and simplified almost to the dangerous minimum, and the only other alternative would have been an increase in the number of tabulating machines and in floor area. This palliative would have been completely unrealistic and momentary and we would have been back with the same problem in due course.

Our decision was not arrived at hurriedly, but with self-induced skepticism, during months of soul-searching research. Three years ago we realized that this problem required drastic action to forestall the pyramiding of our present semimanual efforts to stem the flood of stifling paper work. We sought relief through document flow-chart arrangements which have reduced the usage of forms to the barest minimum. We have streamlined and hurried our processes through adoption of "controlled tolerance accounting" and various other measures affording relief. Even these strictest of regimes could not transcend the immense volume of paper handling.

We searched for a solution, not only of processing speed but in freedom from existing limitations in our machinery. This concerned primarily the area of mechanized processing wherein we have always been imprisoned within 80 columns in a single card which, in turn, caused the retention of a staggering number of files of cards relating to the same single identifications. Another important limitation was the incessant interruptions in the machinery because of the movement of these information groups of cards through the different types of machines to the ultimate end of the processing. These obstacles to high-speed solution of this volume appeared to constitute the prime area for investigation. Our thinking also dwelt on the undue fattening of reports for operating management, to a smothering stage, because of increase in number of matters customarily reported. These three main objectives thus became the core of our studies:

1. Removal of limitation of transcribed information from that contained in present 80 or 90 columns and substitution of limitless capacity per unit of information.

2. Elimination of the interruption in processing due to the use of a variety of machines.

3. Improvement of quality of information developed for management, concurrent with decrease in quantity of detail.

This determination led us quite naturally into the area of electronic equipment and our analysis then took the turn of examination of existing and future types of handling media. We very readily saw the value of magnetic tape and its use in electronic equipment containing logical and arithmetical units with a good amound of memory capacity. The examination of equipment brought us into an area fairly restricted as to a single unit or group of units, which would be able to serve all purposes. This restricted area varied as to their abilities to achieve our purposes. One type of equipment had restrictions with respect to tape, while another type of equipment had a greater memory range. Another type of equipment had restrictions as to instructions but contained a greater range as to tape. Still another type of equipment had a greater memory capacity but less tape and instruction potentiality.

We soon determined that no single type of equipment (other than something made specifically for our purpose) could be found which would completely fill our requirements. We thus had to assay the advantages of the various types of equipment and find out which type came within some reasonable area of optimum. In addition to this type of evaluation, we added to it the potentiality of the particular equipment for increases in all capacities, for increases in adaptability, and for its facility to deal with radical electronic changes within a foreseeable length of time.

We now evaluated the rental costs on our existing mechanized equipment, with projections of the increase of such conventional equipment needed to handle future volume, against the rental costs of electronic data-processing equipment; we came to the inevitable conclusion that the added rental costs of the new equipment would be repaid in a relatively short period. This evaluation included the timing of the release of our existing equipment until we would be completely on the new electronic equipment, which would be readily adaptable to improvements as they were developed, already having the capacity to handle our increasing volumes, with room to spare.

As to physical arrangements for the installation of electronic data-processing equipment, our preliminary discussions with the IBM engineers indicated the floor space which would be required, the type of temperature and humidity control that would be necessary, and other general characteristics of the operating area, including electrical requirements, that would assure proper operating conditions.

We negotiated individual contracts with outside contractors for each major phase of the installation, such as air conditioning, electrical work, floor construction, and ceiling treatment.

Four months ago, an area of 2,700 square feet was cleared and made available to these contractors. Today, our data-processing room is ready for the installation of our equipment.

The basic planning and supervision of construction as it progressed was handled entirely by our own personnel, submitting all specifications and drawings to the equipment manufacturers for their approval, and the installation area has been completed at a cost far less than ordinarily prophesied.

Our initial and present planning for the machine provides for our accounting work to be assimilated on the new equipment in the following order: Passenger and cargo revenue and statistics and related activities, payroll, materials inventories, and then our general books. Our plan provided for the creation of an electronics development group of top-level, highly qualified employees, expert in their particular fields of accounting and control operations. We included the operating heads of the two revenue accounting sections, who had had no previous machine experience, and sent them to electronics school for a month. We added men with equal experience, handling revenue in our tabulating section, to accompany this first group. These people became the nucleus for our revenue application team. Additional experienced accounting and tabulating people were sent to school, and later joined our electronics development group. The release of these people from their regular duties for full-time assignment to the electronics group created vacuums within their operating sections, but their assistants have handled the daily operations in a most competent manner and have gained valuable experience in the process. IBM assigned three of its trained planners to round off the task force, and thus the group was integrated. The first months were spent in general consultation and planning as to how to approach the job, including examination and decisions as to whether or not to redesign certain accounting techniques, together with the actual translation of existing document flow charts to block diagraming.

Process segmentation became increasingly important in our studies, especially insofar as it applied to facility of replacing and modifying sections of work without shocking and dislocating the entire structure.

It soon became apparent that the best approach would be to split the group into two teams, one dealing with passenger and the other with cargo. Each team was assigned a complete unit of diagrammers and programmers and combined operating and tabulating personnel. This organization has worked satisfactorily and we eventually arrived at the point where a diagrammer would carry through the actual programing of his particular diagram. Each team manually checked and rechecked the programs before test data was prepared for the actual testing of the programs on the equipment. We initially tested our passenger and cargo programs on smaller equipment at IBM locations in Poughkeepsie and at IBM headquarters in New York City. Our present tests are now being performed on 705-type equipment in New York. At the present time, we have in action some 80,000 to 90,000 program steps, of which some 50,000 have been completely tested and proven at an average speed of 2,000 steps per hour.

Let us dramatize Pan American's present volume of work, to help visualize our coming liberation from the mass of paper work. A tabulating-machine card is considered as having been "machined" every time a machine operation is performed on it. Last year our company "machined" 1½ billion cards, each 7⅜ inches long. This number of cards, laid end to end, would reach around the equator 6 times. One of our new jet transports, idling along at 550 miles an hour at 40,000 feet above sea-level, would have to fly continuously for 13 days and 13 nights, refueling in the air, just to span this card work of a single year.

The secret of our coming release from bondage and of our newly acquired gift of limitless vision by means of this field of electronic data-processing machines is to be our emancipation from the present enforced slowness of introduction of basic data into the machines and the still greater tediousness of issue of new data after process. Tabulating-machine cards containing 80 or 90 fields of information cannot presently be processed into high-speed analyzers and computers and again out of them at a greater average rate than 250 in a minute; the same type of information is now to be processed at a rate equivalent to 8,000 cards in a minute, 32 times as fast. To drive the point home, this is an increase from 15,000 cards in an hour to 500,000 in an hour.

This startling metamorphosis results from relegating and demoting the tabulating-machine cards to second place by transcribing the data thereon quietly and independently and inexpensively and mechanically at the dead of night to magnetic tape, which then becomes the medium of input into the machines as well as the medium of output from the machines. A tape, 2,400 feet long and 2¼ pounds in weight, containing data equivalent to that in 5 million characters in over 60,000 cards completely filled in, passes this data to the previously instructed central processing unit, the magic lamp, in 6¼ minutes, the rearranged results emerging at the same time and in the same time, on other magnetic tapes. Brilliant mechanical speed thus becomes our cooperative ally, tireless and infallible.

The magnetic tapes are extraordinary objects. A tape loaded with data looks exactly like one that is blank, for the data transcribed on it is by way of the presence of invisible magnetized spots or their absence, and not of visible marks. The binary system is used, whereby combinations of spots within 4 horizontal channels reserved for

such magnetized spots represent the digits, combinations within 2 more of such channels represent the letters of the alphabet together with certain symbols, and the last of the 7 channels contains the positive or negative item-balancing control. These combinations within the perpendicular of the 7 channels running horizontally on the tape thus reflect the single digits and letters and symbols entering into the permutations and combinations of the magic lamp.

Let us now apply our newly found emancipation to a matter of universal interest to those of us in the long-range transportation field. Seven thousand times every working day a Pan American World Airways ticket is sold, somewhere in the world, for travel from somewhere in the world to somewhere else in the world. These tickets are not ordinary little stubs covering travel over a relatively short distance over the lines of a single carrier, but contain intricate flight coupons, frequently with multiple legs and including travel over the lines of many other air carriers, each of which flight coupons must be kept under rigid control because of its negotiability and because of its revenue distribution requirements. In some cases, there have been as many as 50 flight coupons within a single ticket.

To control this immense volume in an orderly and inexpensive manner, Pan American passes all sales to a control account known as unearned transportation revenue, the detail being maintained on tabulating-machine cards, one card for each flight coupon of each ticket. Because of the multiplicity of flight coupons per ticket, each 2 tickets have been averaging 5 tabulating-machine cards. Where a ticket carries more than 1 flight coupon, the key-punched card is reproduced mechanically as many times as is necessary to service the expected usage of the flight coupons. The additional cards differ from the original card only as to the subnumber assigned to each flight coupon.

Usage of the flight coupons anywhere in the world is reported to Pan American's general accounting office in New York through the passenger flight envelopes and the accompanying lifted flight coupons, through the billings from other carriers and the accompanying flight coupons lifted by those carriers, and through the refund reports and the accompanying refunded flight coupons. This usage relieves the inventory of unearned transportation revenue, the usage being translated to tabulating-machine cards which are used to attrition the inventory, the remainder being constantly under tabulating-machine card control.

Let us peer through the 20-foot-wide picture window of our new electronic data-processing machine room in New York and see what this is all about. Let us rub the "magic lamp of industry" and observe the miracles. We will look first at the input of an oversimplified illustration within passenger revenue accounting.

Our unearned transportation revenue balances and detail can be contained on magnetized tape on about 4 reels and the current sales and lifts on about 6 reels. We are converting to tape processing with only minor changes here and there to secure data which had been previously unobtainable or too costly to obtain, where now it will be conveniently extractible. Since the initial input for this type of equipment is still a card, we found that we could save card-to-tape time (and card costs too) by the simple device of punching the data for two or more tickets into one card. For example, our own flown, refunded or billed flight coupons will be punched 5 to a card, other carriers' coupons 3 to a card, and our auditor's stubs 4 to a card. The constant data for any single group is picked up from lead or intermediate master cards in the customary manner. After the initial card-to-tape operation, the tape is fed into the central processing unit and complete individual records for each coupon or auditor's stub are prepared and at the same time the records are edited and zero-balanced to insure the consistent accuracy demanded by and from the machine. Once this operation has been performed, a cycle of processing is restricted to the relatively minor task of loading and unloading the tape units and of posting and controlling the outputs. We have tried to plan our work so that the desired direct outputs from the central processing unit would be on tape, rather than on the vastly slower printer or punch, using those pieces of tape-fed equipment to operate independently from the main frame.

Our passenger revenue operation will require about 40 individual programs on the 705 equipment, some of which will be repeated with new raw data several times during the month, while others will require only one pass. The central part of our passenger revenue accounting is the development of revenue figures resulting from the allocation of revenue among our operating divisions, and a determination of the amount of travel which has been sold and which has not yet been used by our passengers. Basically, the following sequence of steps is involved:

1. Current month's sales are key-punched and tape-fed into the 705 machine, where the sales data is edited and arranged in a predetermined form.

2. Lifts of flight coupons are similarly edited and arranged.

3. Other carriers' billings, revisions, and refunds of our coupons are combined in one tape and also edited and arranged.

4. The current balance-forward unearned transportation revenue tape is updated by the current month's sales, while any lifts, payables, revisions, and refunds which were not previously matched against this balance are merged with current month's lifts, payables, revisions, and refunds.

5. At this point we match our updated lifts, revisions, and refunds against the updated unearned transportation revenue tape. As a result of this match, our various reports are developed.

The sorting, merging, matching, and computation of this matter presently consume about 750 hours of machine time each month; the electronic data-processing machines are expected to do the same job in 15 hours. The total passenger revenue job, now requiring over 4,000 hours of machine time each month, should then be done in 125 machine hours. The present work for the month, including the inventory of "Unearned transportation revenue," is contained in almost 400 tightly-packed trays of tabulating-machine cards; the equivalent data is to be contained on 10 reels of magnetic tape.

Naturally, the 705 equipment works on raw data which has to be coded manually and key-punched before introduction into the system. The various codes, numerical and alphabetic, are the source of all the information which is developed by this operation. It is in the reduction of these manual operations and key-punching that much future methods work remains, and a fertile field for economy will be found through electronic scanning and direct-tape appliances, eliminating to the greatest degree possible the ubiquitous, unwieldy and space-consuming cards.

Our new machine is inherently lazy, since it has absolutely no initiative and operate only upon explicit instruction. Since its operations are performed in thousandths of a second, occasionally the lacing and continuity allow gaps of a few milli-seconds here and a few milli-second there to occur. Rather than waste these occasional milli-seconds, a completely different topic can be handled at the same time as the topic being developed, which will utilize these stray milliseconds with resulting tape answers. Thus we can activate a payroll topic at the same time that the ticket accounting is being performed and thereby help keep the machine from turning into a loafer. This has been made practical by the development of two new peripheral adjuncts to the 705 equipment which will expand its use even further than originally anticipated. First is the tape recorder coordinator, a unit which speeds up the entire processing cycle. It makes possible simultaneous reading, processing, and writing, and permits the processing of two or more different applications at the same time. Second is the tape data selector, a unit which actually links directly to punched card and printer equipment without the use of the central processing unit and selects records or portions of record from a tape. In other words, multiple records can be obtained from one master tape.

As illustrative, we may be called on for complete information on all passenger movement out of Leopoldville in the Belgian Congo. How many first class passengers, how many tourists, where did they ultimately go, who were the connecting carriers, who sold the tickets, were they round-trip or open-jaw passengers, what days of the week and flight numbers did they prefer, and so on and on. We hook the tape data selector up to a card punch and the apparatus whizzes along, cutting a card whenever the symbol for Leopoldville, the common denominator, is flashed. The resulting quick deck of cards, reflecting the culled-out information, is then ready for use in the reports.

Where it is necessary or advisable to reflect any of the final or intermediate data in print, the tape selected is thereupon removed from the central processing unit and connected directly to a high-speed printer. Printing four items to a line, this printing machine will print 4,000 items in 1 minute, almost a quarter of a million items in 1 hour.

On the present machines, information selected from a passenger ticket or cargo air waybill has been confined to the relatively few columnar fields of a columnar tabulating-machine card. With magnetic tape, information covering tickets or air waybills, basic salary information or payroll deductions, statistics or other vital data, can be recorded without such a limit. Thereafter, kaleidoscopic treatment can be applied to the data on the tape to obtain endless patterns and varieties of desired information.

We feel that our new accounting mechanisms will qualify us even more to be considered as an indispensable arm of the sales department. On the one hand, we do our best to satisfy our customers. We make a point to make refunds as speedily as possible, to pay for c. o. d. shipments from New York in dollars as soon as we are advised of collection at destination (even though the collection has been in a foreign currency), to handle insurance claims justly and rapidly, and to furnish quick and good responses to inquiries from our customers. Our new machines will keep us scrupulously up to date.

On the other hand, we try to provide the sales force with tools to help show where business lies, in such form that it can focus its magnetic personalities on its prospects without wasting time. We have far-reaching plans of direct expanded assistance from our new machines.

We issue lists of sales by month and by point of sale and by operating division and by individual agent, and, as far as the other airlines of the world are concerned, by and for each airline at each point of sale. We issue special traffic studies from time to time as called for, to help develop projects that our sales force is working on.

We are building refined data on the transportation of commodities. The development of cargo is a must, and we plan to be able to help develop it fast and efficiently, by indicating the products and sources and shippers and consignees and geographical areas which desperately need our airline services.

But this is not enough. Our revenue capacity is being increased every time we receive another airplane, and they are coming thick and fast.

Picture, if you will, a cargo salesman being able authoritatively to advise a potential customer that there is a ready market for his goods in an area of the world with which the customer is not familiar. Imagine a salesman being armed with the latest information enabling him to promote the business that produces the most revenue, and also thus being able to aid the customer by being sufficiently informed to acquaint him with more data about certain physical areas of his business than he perhaps knows himself.

This is illustrative of the type of ammunition that Pan American plans to supply our salesmen of the nearby future by means of the electronic data-processing machines. Some of the reports that we are developing now include:

1. A report of business derived from individual shippers in the United States. This would include, as to each shipper, the sales area, the destination area, the weight, the number of shipments, the revenue, and probably the type of commodity.

2. A report on cargo commodities, by carrying divisions of the company. This would list 30 all-inclusive, separate, major commodity classifications, summarized into sales origin, Pan American on-line origin and Pan American on-line destination, by weight, number of shipments, and total revenue.

3. A report of weight brackets, by carrying divisions of the company. This would show the weight, the number of shipments and the revenue earned by divisions, separated into weight brackets of 50 pounds from 1 to 100 pounds, 100-pound brackets thence to 1,000 pounds, 500-pound brackets thence to 4,000 pounds, 1,000-pound brackets thence to 7,000 pounds, and details of all shipments over 7,000 pounds. This would be useful in determining the type of shipment that produces the most revenue, the type of shipment needed to produce more revenue, the type of shipment that can be readily carried by the existing type of flight equipment during peak and low seasons, and future rates as to the several weight brackets.

We have addressed ourselves in this discussion principally to revenue and statistical applications, because it is in these areas that the volume of detail has become particularly stifling. But as these areas become less critical, we will start to gain practical value from the thousands of concentrated hours of detailed planning on other applications which we are engaged in concurrently with the planning for the first applications.

Payrolls are recurring and intricate and of considerable volume, so the handling and accounting for payrolls will be accorded the inventory treatment so admirably executed by the electronic data-processing machines. Under this inventory treatment, we start out with the opening inventory of our people and their salaries and payroll deductions and accumulations, add people put on the payroll, subtract those who leave, adjust for other changes in payroll and related information, multiply and divide through the application of rates of pay and of related information, and end up with the closing inventory of our people and of their salaries and of their payroll deductions and accumulations. The important byproducts embrace the mechanical issue of paychecks, the calculation and distribution of costs, managerial statistics and the innumerable reports called for by the company and by those agencies interested in payroll and payroll deduction information.

The accounting for the acquisition, disposition and existence of spare parts, materials and supplies is another of our most pervasive accounting elements which are recurring and of immense volume. The electronic data-processing machines are hungry for this type of activity; through their speed and uncanny capacity for exposing other facets of information not hitherto economically available to produce, they are expected to create a direct savings in amounts purchased through disclosing numerical and geographical saturation areas, with reorder periods lengthened accordingly. Commitment accounting becomes far more facile to arrange and delivery schedules can be more readily displayed to interested technicians. The byproducts of inventory control under this method will be immediately apparent to all fiscal representatives in the airline industry.

The use of transceivers will add immeasurably to the potentials of electronic data-processing machines. Transceivers are machines which permit the duplication of tabulating-machine cards from a distance, through the use of telephone and telegraph circuits. Place 35,000 tabulating-machine cards in 4 transceivers attached to a single telephone line at 6 o'clock in the evening, and at 8 o'clock next morning, 14 hours later, a complete duplicate set of cards has been reproduced at the office 3,000 miles away, through the medium of its transceivers there. The potentials of this medium of accurate and speedy information transfer stagger the imagination.

The matter of instructing the machine as to the different applications is enormously difficult. Since the machine obeys implicitly but cannot think, the instructions must be in the language of the machine, which language has been reduced scientifically as to processes and "addresses" within the machine. This language, worked out patiently and painstakingly by our planning group with infinite attention to detail of logic diagraming and programing, is converted from the final instruction codes to tabulating-machine cards; it is understood thoroughly by our technicians, who must be able to apply the knowledge absolutely accurately, or else chaos would result, the Djinn of the Magic Lamp protesting vigorously and convincingly. Some programs contain as many as 2,500 instructions, and the passenger revenue programs previously discussed will probably have a many as 50,000 instructions. Fortunately, these programs can be proven on the machine prior to their being put into operation; once perfected and laced in with related programs, they can be set aside for subsequent use, with the certainty that they are standing by for orders, ready, willing and able to obey.

As planning on each individual application is concluded, our operating people will return to their respective sections to follow through on the actual installment of the electronic procedures, while the tabulating people will return to their section to handle the actual operations and scheduling of the 705 equipment. A small core of staff and methods men will remain in our electronics development group and will be charged with constant review of existing applications, seeking shortcuts and other simplification and changes. It will from time to time be assigned to new projects, together with top operating people concerned with the particular project. Each department will thus eventually have some people, including its manager, who are familiar with their own electronics application, while an additional small group of staff and methods men, with all-round experience, will be available as needed for advance planning and other assignments. We contemplate having only 2 or possibly 3 applications being diagramed and programed at any one time. We believe that our later applications will be less time consuming, and we will be able to test them on our own 705 equipment at our convenience. At the present moment, we are programing our payroll application, and expect to go into materials inventory programing when our passenger application is solidified.

As to the abolishment of tabulating positions due to the installation of the 705 equipment, we sought out the union representatives over a year ago and laid our plans before them to avoid any atmosphere of mental stress amongst the employees. The resulting agreement gave tangible and workable evidence of company consideration and of union cooperation in erasing effectively one of the major problems facing industry with respect to automation.

Our premise was that no employee in the tabulating section who had been in our employ prior to the planning for the new equilpment would lose his employment unless he so desired, nor, if he remained, would he suffer any monetary loss as the result of the installation of the new equipment.

We first discounted the number of employees that we felt would leave our employ because they preferred to continue working on equipment of the type being replaced. We then determined that normal personnel turnover in other sections of our general accounting office, through the transition period, would provide as many jobs as the number of personnel whose positions were to be abolished.

Personnel moving into a position vacated through such turn-over would go in on a temporary basis until the release of a qualified tabulating section employee, who would thereupon take over that position. Employees from other sections of the General Accounting Office who had moved into such temporary positions would then move back into their previous positions, as explained to them at the time they accepted the temporary vacancies. Newly hired temporary employees would either be absorbed or released from employ, as outlined to them at the time of employment.

In a truly worthy spirit of cooperation, the union agreed to extend its definition of "temporary" in this case to embrace the transition period. It also agreed to company selection as to which positions were to be designated or reserved for tabulating section personnel and also as to which of such personnel were to be placed into the selected positions.

Pan American's fanatically devoted group of planners, diagramers, and programers, sequestered and hidden from the swirl of normal business activity, has brought our coming pattern into the near future, proving each element as it goes along. The magic lamp of industry stands ready to be rubbed, its jinni is patiently awaiting his release, and then our rescue from the morass of paper-work is far advanced, with the concerted aid of our intelligent young Aladdins.

Thus Pan American is meeting head on the challenge of the requirement for faster and more essential vital data without increasing production cost, by changing the bed of its stream of accounting and statisics and controls and thereby handling the increased volume gracefully and with room to spare.

Mutual Understanding

EXTENSION OF REMARKS
OF
HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 28, 1956

Mr. HAYS of Ohio. Mr. Speaker, under leave to extend my remarks, I include an article from the magazine Steel, dated March 12, 1956, about the part that Cyrus Eaton has played in the life of the city of Portsmouth, Ohio. Mr.

Eaton is doing a similar job at Follansbee Steel Corp., across the river from my district. He stepped in to save this company from being moved out of the district and to preserve the jobs of many hundreds of men. Being the public-spirited industrialist that he is, Mr. Eaton, it seems to me, set the pattern that would be well for many other industrialists to follow:

MUTUAL UNDERSTANDING

One of the most unusual demonstrations of the growing desire on the part of management and labor to understand each other's problems occurred a few days ago in the Ohio River city of Portsmouth, Ohio. The entire community took time out for a Recognition Day to pay tribute to both sides for their efforts in achieving mutual understanding.

Portsmouth had good reason to celebrate. The city was about to become a ghost city when World War II ended. Except for a shoe factory and a few smaller plants, its people were largely dependent for their livelihood on a steel plant that was about to be abandoned. The city's labor record made it unattractive to new enterprise.

Financier Cyrus Eaton came to the rescue by acquiring the steel plant in June 1946 and initiating a modernization program. In January 1950, Portsmouth Steel was consolidated with Detroit Steel Corp. By the end of 1957, $90 million will have been expended on modernization and expansion. Already, jobs have been made for 4,200 workers.

At the outset, Detroit Steel's management decided on a policy of dealing frankly with its employees and the community. It initiated a program of supervisory training and management development. It encouraged management personnel to participate actively in community affairs (its blast furnace superintendent is Portsmouth's mayor). Speakers were provided for clubs and societies, and plant tours were set up for community groups. Educational material about the company was made available to schools. A 4-year college scholarship in labor relations was set up for Portsmouth high school graduates.

The program for industrial harmony fostered by industry, labor and the community has paid off in many ways. For example: The Atomic Energy Commission picked a site near Portsmouth for its gaseous diffusion plant. Labor agreements concluded in advance made it possible to complete this $1 billion plant (it employs 2,700) ahead of time and at savings of millions of dollars.

There is nothing especially unusual about the methods used in Portsmouth. What is unusual is the determined effort to make them work through better mutual understanding.

IRWIN H. SUCH,
Editor in Chief.

President Eisenhower Holds Important Conference With President Cortines, of Mexico, and Prime Minister St. Laurent, of Canada

EXTENSION OF REMARKS
OF
HON. CHARLES A. WOLVERTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 28, 1956

Mr. WOLVERTON. Mr. Speaker, there is no act of the administration in recent months that can so readily produce good will and beneficial results of a lasting character that the invitation of President Eisenhower to meet with President Adolpho Ruiz Cortines, of Mexico, and Prime Minister St. Laurent, of Canada.

The purpose of this meeting held at White Sulphur Springs, W. Va., at the famous Greenbrier Hotel, was to discuss in a friendly and informal manner problems and conditions that affect the welfare of the three great nattions of the North American continent. This important gathering could mean much to the future security and well-being of not only the three nations involved, but also to the entire Western Hemisphere.

The holding of this important meeting at this little village in the Allegheny Mountains is not the first time that this has been the site for important gatherings. It has entertained 13 Presidents in its time. But, this was the first time that the President of Mexico, the Prime Minister of Canada and our own President have met either there or elsewhere in a joint conference.

Notwithstanding the importance of many other conferences that have been held in this beauty spot of America, never has there been one so full of possibilities as this present one. It is my opinion that it is long overdue. It seems as if we have heretofore looked upon the far-off nations of the world as our chief concern. Our national wealth has been poured out lavishly upon all of them, large and small, in an effort to strengthen them in their economy, as well as militarily. All of this has given the appearance that these distant nations are more important to our welfare and security than the nations of Mexico and Canada, our immediate neighbors to the south and north of us. Furthermore, it has seemed that we were taking the friendship of Canada and Mexico for granted. While there is every reason to consider that these two nations are our friends in the truest sense of the term, and while it is not necessary to buy their friendship, as we seem to be trying to do elsewhere in the world, yet, it is a great mistake to take them for granted, not because they would ever become other than friends, but because they are our friends. These two nations, Mexico and Canada, have been, and will continue to be, our friends. It is because of this unadulterated friendship that we owe them a greater degree of appreciation and acknowledgment than we have shown in the past.

Thus, it comes with a feeling of satisfaction that we have at last recognized the friendship of these two great nations to the north and south of us. And it is particularly gratifying that this recognition comes on our highest level, namely, the President of our Nation. It is fitting that it be so.

We are all much more aware of the economic ties that bind us to Canada than we are to those that bind us to Mexico. This may be the reason that we have not always seemed as anxious to recognize our obligation to create trade conditions between Mexico and ourselves that would be mutually helpful to both.

Without any intention to discount the favorable trade relations that exist between our Nation and that of Canada, which it is a pleasure to recognize, yet, because of a general lack of knowledge of the facts underlying our trade relationships with Mexico, it seems appropriate to make some reference to them as a justification of the reason that has impelled President Eisenhower to include Mexico with Canada in a consideration of affairs that are pertinent to our mutual welfare.

An examination of our trade statistics reveals that Mexico is the fourth largest purchaser of United States products in the entire world, and the first in all of Latin America. It is buying $1.60 worth of United States products for each $1 worth of Mexican products bought by the United States from Mexico. As an illustration, it is astounding to realize that Mexico's sugar industry alone is buying more than $7 worth of United States products for each $1 worth of Mexican sugar bought by the United States. Altogether, the purchase of United States products by Mexico is the fourth largest among all the nations of the world. It is exceeded only by Canada, United Kingdom, and Japan. Furthermore, a further examination of United States public records shows that Mexico's purchases enrich the economy of every State in the Union.

It is highly desirable that these little known facts of Mexico's trade relations with the United States be given the fullest consideration as a result of the joint conference recently held. The favorable results that can be obtained as a result of strengthening the ties that bind the United States, Canada, and Mexico together can be of incalculable benefit, not only to each of the participating nations, but also in promoting the economy and security of the whole Western Hemisphere.

Statement of Warrior-Tombigbee Development Association Before the Subcommittee on Public Works of the House Appropriations Committee, March 28, 1956

EXTENSION OF REMARKS
OF
HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 28, 1956

Mr. BOYKIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

I am John M. Griser, president of the Warrior-Tombigbee Development Association. The nonprofit association, with offices in Birmingham, Ala., represents a membership made up of individuals, businesses and industries throughout the river valley. We have one purpose: To seek development of the Warrior-Tombigbee River system in Alabama for better navigation and allied purposes; and the deepening of the Mobile Ship Channel in Mobile Bay into which the river empties.

This is the fifth consecutive year we have been privileged to present a statement to this committee. With the aid of the Congress

and the work of the Corps of Engineers, United States Army, significant progress has been made in the modernization of the Warrior-Tombigbee Waterway. However, much work yet remains to be done.

In the 1957 budget now under consideration, there is an item of $4,580,000 to continue construction of Warrior lock and dam, located about 50 miles upstream from the recently completed Demopolis lock and dam. Ground for this navigation structure, which will cost about $19 million, was broken in 1954 with an initial appropriation of $1,800,000. Last year, the Congress voted an appropriation of $4,100,000 for this project. Work on Warrior lock and dam is on schedule. The $4,580,000 is needed to keep it on schedule. The two old locks and dams to be replaced by this new structure are in an advanced stage of deterioration, are totally inadequate to meet present day needs of commerce, and are regarded as the weakest link in the entire river system. We respectfully urge this committee's approval of the full amount in the budget for Warrior lock and dam.

The 1957 budget carries a recommendation that $1,600,000 be appropriated this year to continue dredging a deeper ship channel in Mobile Bay. While we are gratified that funds are recommended in the budget, we are alarmed over the inadequacy of the amount recommended and earnestly ask this committee to increase the funds by $943,000 to a total 1957 appropriation for the Mobile Ship Channel project of $2,543,000.

In 1954, Congress authorized the deepening of the Mobile Ship Channel to an ultimate 40 feet, with 42 feet over the outer bar. The following year, $1 million was appropriated to begin the work. With this appropriation the Corps of Engineers set in motion a plan to execute the first phase of the project, to deepen the bay channel to 36 feet, with 38 feet over the bar. (The present depth in the bay is 32 feet with 34 feet over the bar.) Initial dredging work has been started in the bay on a contract which contemplates finishing the first phase of the project in a continuous operation. In order to do so, an appropriation for the Mobile Ship Channel of $2,543,000 is required this year, $943,000 more than is budgeted and in the bill now under consideration. Unless this additional amount is made available this year, the deeper channel in the bay will be inaccessible when finished because it cannot be reached over the shallower bar channel.

Unless the 1957 appropriation for the Mobile Ship Channel is increased from $1,600,000 to $2,543,000, the first phase of the dredging operation cannot be completed as an uninterrupted project. This means that the present dredging contract will have to be broken off and reinstituted at some later date when additional funds are appropriated. Such interruption of work on this first phase of the project will increase the cost of the unfinished portion of the first phase by about 25 percent. In addition, a year's delay will occur in providing Mobile—1 of the 6 major ports on the Gulf of Mexico—with a much needed 36-foot channel.

Commerce handled at Mobile now totals approximately 14 million tons annually. Mobile's dock facilities and her bulk handling and storage facilities are among the finest on the Gulf Coast. But her ship channel is inadequate. Her peacetime growth is being retarded by this inadequate and dangerous channel. Should national emergency arise, the Nation's potential strength would be handicapped by this port's inability to serve the needs of oceangoing commerce adequately.

We urgently request this committee to raise the appropriation for the Mobile ship channel project to $2,543,000 in the interest of sound economic practices in this dredging operation and in the interest of present and future needs of this vital gulf port city.

In addition to continuing construction of Warrior lock and dam and dredging the Mobile ship channel, there is another equally important project which, in our estimation, merits favorable consideration. That project is a new lock and dam in the lower reaches of the Warrior-Tombigbee River System. Jackson lock and dam is designed to replace three 50-year-old locks and dams which serve a 117-mile reach of the river between Jackson, Ala., and the new Demopolis lock and dam at Demopolis.

On March 6, only 3 weeks ago, the Corps of Engineers' Board of Engineers for Rivers and Harbors unanimously approved a plan to build the new lock and dam 3 miles west of Coffeeville, 119 miles above Mobile. Thus, we understand, the way is now clear to begin construction as soon as Congress provides the money.

The plan had not sufficiently progressed for the Corps of Engineers to include the Jackson lock and dam project in its 1957 budget requests. But the plan is now ready and planning has already progressed to the point where we understand the Corps of Engineers can economically use construction money to get work started this year.

Local opposition which developed against a previous plan for the Jackson lock and dam project has now largely been dissipated. The opposition was directed principally at the amount of land to be flooded. The amount has been reduced from 22,600 acres to be flooded in the original project to 2,920 acres in the project for which we are asking funds.

It is imperative that work be started on Jackson lock and dam as quickly as possible. The three structures to be replaced—locks and dams 1, 2, and 3—have outlived their usefulness and are today causing serious difficulties and costly delays in the movement of commerce. The lock chambers are 52 feet wide and 282 feet long. They can accomodate only three Warrior-type barges and a towboat. Since most tows on the river average from 7 to 13 barges, this means that tows must be broken up at each lock and locked through in several operations. Additionally, the three dams are low structures originally designed to create pools for packet steamers and keelboats. These were shallow-draft vessels with capacities of but a fraction of that of a large modern tow. The pools created by these low dams are wholly inadequate for the deep-draft, 500-ton barges and modern screw propeller towboats which link the industrial and agricultural heart of Alabama with the gulf port of Mobile.

The new Jackson lock and dam will effect substantial annual savings for barge and towboat operators in four specific ways:

1. Elimination of delays now caused by conditions existing at locks 1, 2, and 3 and in the lock 2 pool. These delays are caused by congestion at the locks, lock repairs, and groundings in shallow pool waters.

2. Utilization of a single large lock rather than three small, inadequate locks.

3. Full utilization by operators of the maximum draft in loading barges. This will be made posible by the maintenance of a full project depth by the new high dam.

4. Ability of operators to operate at increased speeds in the single, deeper pool which the proposed new dam will create.

On the basis of these benefits to navigation, the towboat operators who in 1954 moved approximately 2 million tons of commerce over the reach of river to be improved by Jackson lock and dam would have saved $1,236,129 had the Jackson structure been built.

But these savings would not have stopped with the barge and towboat operators. They would finally have been reflected in the price of consumer goods made from the raw materials which make up the principal cargoes moving over the river. Since movement of commerce on this river system continues to increase at a steady rate, the savings which will be achieved upon completion of Jackson lock and dam will be even greater than indicated here.

We recognize that we cannot speak officially and do not attempt to do so here, but it is our understanding that approximately $1 million could be economically and expeditiously used this year to begin construction of this urgently needed navigation structure. Perhaps, an appropriation even less than this relatively small figure would suffice to initiate construction of Jackson lock and dam.

We urgently request this committee's consideration of an appropriation to begin construction of Jackson lock and dam to keep the whole Warrior-Tombigbee development program moving on the most orderly and economical schedule.

The condition of our waterways makes it necessary that constant maintenance be performed by the Corps of Engineers in order that commerce can move with a minimum of delay and at the lowest possible cost. We earnest ask that favorable consideration be given to this item in order that sufficient maintenance funds will be available for projects in our State as well as other States.

Inland waterways are among the Nation's most valuable natural assets. Their contribution to the national economy and well-being can hardly be overstated. It is of the utmost importance, therefore, that these water resources be developed in an orderly manner. To do so requires long-range study and planning. We request that the most conscientious consideration be given to the appropriation of adequate funds to continue long range studies and planning work by the Corps of Engineers without interruption.

We appreciate the opportunity of again appearing before this committee.

Melancholy Conclusion

EXTENSION OF REMARKS

OF

HON. CLARK W. THOMPSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 28, 1956

Mr. THOMPSON of Texas. Mr. Speaker, under unanimous consent, I place in the RECORD extracts of a speech made by the Honorable John Ben Shepperd, attorney general of the State of Texas, at Washington-on-the-Brazos, March 2, 1956, commemorating the 120th anniversary of the signing of the Texas Declaration of Independence.

It reads as follows:

MELANCHOLY CONCLUSION

On this spot, by this river, in these woods, long ago, half a hundred men stood in a cold March wind outside an old log house, to read and sign a piece of paper that was to declare to the world why they were impelled to take up arms against their Government.

These men were no fiery rebels. These were no scheming revolutionists. There were no power-hungry insurgents here.

Here was old Collin McKinney, with 70 years of toil behind him, too bent with age to delight in mutiny. But the aching in his bones could not quell the burning in his soul.

And here was Bill Mottley, 24 years old, and not eager to sign a paper that might be his death warrant. And Dick Ellis, middle-aged and weighed down with responsi-

bilities. And here was Jim Swisher, come from San Antonio, where he saw old Ben Milam die. He had no thirst for blood.

And here was Tom Barnett, and Ed Waller, and twoscore other men who would a blamed sight rather be at home tending their farms and cattle or dancing the pigeon wing to the music of the fiddle and the clevis and pin.

But instead they came 400 miles from the Red River, and down through the hills from Nacogdoches, and across the prairies from Victoria and San Patricio, up from the coast and out of the bayous, to this spot, by this river, in these woods, to stand together by an old log house in a cold March wind.

These were the men who had left their country behind and followed their Moses into the wilderness. They cleared lands and built cabins and made homes. Every year they sent 2,000 bales of cotton down the Brazos and raised 50,000 barrels of corn. Yet 9 months of the year they went without bread, and their wives wore buckskin just like the men, because they had no wool. Bread, salt, sugar, and coffee were luxuries; seed corn at first had to be packed from San Antonio and Nacogdoches. Everything they had they dug out of the soil with their fingers, and the richest American in Texas had less than $10,000.

But they had something money wouldn't buy. The sick suffered not from want of nursing nor from want of medicine if their neighbors had it. No man, whose neighbors had meat and bread, suffered from hunger. Newcomers who had not yet procured cattle were supplied with milk and butter by voluntary loan of cows. Those who were in distress dared not, under penalty of giving offense, offer pay for personal help from their neighbors. Life was all work and little profit, and they had no time for wars.

Then why did they come to Washington-on-the-Brazos? Why did they gather here to compose lofty phrases about "melancholy conclusions" and "the consequence of malfeasance?" What infamy drove them to commit the 35,000 people of Texas to war against a nation of 7 million, at odds of 350 to 1? What bitter gall compelled them to beat their plowshares into swords?

Fifteen years earlier, Stephen Austin had settled his first 300 families at Washington and Columbus. Then came Green DeWitt with his hundreds, to found Gonzalez west of the Colorado. Hayden Edwards came down from the north with hundreds more—and Dave Burnet, Ben Milam, De Leon, and Zavala brought in their settlers, American and Mexican alike. They came under the provisions of a constitution which made Texas and Coahuila one sovereign State, with sovereign powers, in a Federal Republic.

And then the constitution was taken away. Local self-government was a dream unfulfilled. A dictator had usurped the Mexican Government, and his policies were harsh and inconsistent. Military forces in Texas were arrogant and overbearing. Property was confiscated without cause, and citizens arrested for no reason. There was no appeal to courts of law and no guarantee of trial by jury.

Tariffs were imposed on imports and barriers were slammed down to prohibit further American immigration. The colonists were without fair representation in the state congress at Saltillo, and Texas was a mere appendage on the state of Coahuila. A pitiful attempt to organize a Sunday school was squashed by the government, and religion and politics alike were dictated from the capital.

The colonists gave their ardent support to General Santa Anna, on his promise that when he achieved the presidency, he would restore constitutional government. But when he rose to power, he turned around, and he out-dictated the dictator he had overthrown. There was no government but that of Santa Anna. There were no laws but those dictated today and altered tomorrow, and there were no rights or powers but those exercised by Santa Anna 800 miles to the south. As the Texans put it, "* * * government has been forcibly changed, without our consent, from a restrictive, federative republic, composed of sovereign states, to a consolidated, central despotism."

This tyranny was endured for years. When Texans took up arms against authority, it was to protect particular rights in particular areas—never to initiate rebellion against the government itself. When William B. Travis was unjustly arrested with several other colonists and held at Anahuac, his fellow Texans tried to free him by force. But even while they besieged the fort, they sat down to write the Turtle Bayou Resolutions, declaring that they were not in revolt against the Mexican Government.

Before that, Stephen F. Austin and his colonists had opposed the revolt of Hayden Edwards at Nacogdoches. In 1832 and 1833 the Texans called conventions at San Felipe to petition for a just and peaceful settlement of their grievances, and asked for a state constitution that would protect their lives, property, and civil rights. As late as November 1835, long after the battles of Velasco, Anahuac, Gonzalez, and Concepcion had plunged the settlers into armed conflict, the provisional government of Texas voted a declaration that the colonists were not in revolt against Mexico, but wanted only to restore the constitution.

But Santa Anna said that they were traitors in revolt. The Napoleon of the West brought an army across the Rio Grande, and even while Texans gathered and the March wind blew at Washington-on-the-Brazos, Bowie, Crockett, Bonham, Travis, and ninescore other men were looking out over the walls of the Alamo at 3,000 Mexican soldiers flying the blood-red flag of no quarter.

The signers of the Declaration were not here for a light and transient cause. They were not here for glory, or power, or fame, and certainly not for gain—their struggle was to leave them $1 million in debt. They said they were here because patience and restraint had ceased to be a virtue. They said they had come because their frequent and repeated efforts toward peaceful settlement of wrongs, and their constant appeals for help to their countrymen in the South, had failed, and they were forced to the melancholy conclusion that they, and they alone, were left to fight for the liberties to which all men have unimpeachable right. This, they said, is our sacred obligation to posterity, and for this cause came we here.

Across 120 years of triumph and tragedy, through periods of chaos and upheaval under 6 national and State constitutions, through independence, statehood, secession and bloody war, every generation of Texans has had to answer that eternal question, "For what reason have we come to this hour?"

And we, if we deem ourselves worthy to stand here where the authors of our liberty stood, should ask ourselves, "Why have we come back to Washington-on-the-Brazos?"

Are were here only to rehearse the past, or do we dare to examine the present?

If the 58 men who signed their names to the Declaration of Independence March 2, 1836, were here today, would they see any similarity between their day and ours? What would old Collin McKinney say if he saw Texas stripped of her sovereign powers by arbitrary Federal pronouncements? What would he say if he saw Texas divested of her natural resources by unconstitutional means? What would he say to the usurpation of broad fields of State taxing powers and legal jurisdictions, or the dictation of State government policies from beyond the borders of the State?

Yes, if he were here, old Collin McKinney would be on familiar ground. The signers of the Declaration would understand our problems. They, too, tried to interpose the sovereignty of Texas to stop the onrush of overcentralized government. They sent Stephen Austin to Mexico with petitions for an honorable and just reapraisal of government policies, and he was thrown in a dungeon, accused as a rebel.

Are there not idealistic dungeons today into which the defenders of States' rights are thrown for trying to preserve the Constitution? Are they not called rebels and accused of waving a Confederate flag?

The people of Texas 120 years ago appealed to their sister States and all their fellow countrymen for moral assistance, and got none. Shall we be forced, like them, to the melancholy conclusion that we, and we alone, are left to defend the integrity of the Constitution?

I'm glad those 58 men are not here today, for what good would their muskets be, against the forces who stand not in the open, but behind pious cloaks of immunities? They brought two cannons called the Twin Sisters a 1000 miles down the Ohio River to volley and thunder at San Jacinto. But where are the Twin Sisters that can volley against false ideas? Where is the flintlock that can thunder against the indifference to the basic principles on which our constitutional Government was founded? Where is the army that can march against public apathy?

The signers of the Declaration, with pen in one hand and musket in the other, did their job, and they did it well. Let them rest in peace.

Let no Texan rest while in his possession are the weapons of his own deliverance—Bibles, backbone, brains, and ballots. We will not rest until our sacred obligations to posterity are discharged, though we stand alone.

A century and more has passed since the Texas colonists stood alone against the armed power of a tyrant and swore they would die on their feet before they would live on their knees. Their legacy to us is greater than the document they signed here.

Just as they, a 120 years ago, "asserted their confidence in the rectitude of their intentions, and committed their cause to the 'Supreme Arbiter of the Destinies of Nations,'" so we, too, as we stand here, rededicated by this occasion to the principles and ideals for which they fought, commit our cause with an humble and contrite heart to the "Supreme Arbiter of the Destinies of Nations."

The Sensible Approach

EXTENSION OF REMARKS

OF

HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 28, 1956

Mr. BOYKIN. Mr. Speaker, Tuesday night, March 6, the leaders of both the white and Negro people in one of the counties in the congressional district which I have the honor to represent—Clarke County, Ala.—met at the Clarke County Courthouse, in a meeting which was called to discuss the issues now creating friction between the races and to assure a continuation of the friendly relations now existing between the races in that county.

This meeting was attended by county and city officials, legislators, leaders of

farm activities and others. Representative members of the Negro race were invited from every beat in the County.

Under leave to extend my remarks in the RECORD, I include an editorial from the Clarke County Democrat, Grove Hill, Ala., in its issue of March 8, 1956, entitled, "The Sensible Approach," and a news article from the same issue entitled "Both Races Agree Present Plan Best."

It is, indeed, heartening to those of us, not only in the South, but in the rest of our Nation, to see the leaders of both races in one of our southern counties take the lead in this time of crisis in maintaining the friendly relations which have been built up down through the years in our section, under which the Negro race has made such rapid advancement:

THE SENSIBLE APPROACH

Clarke County citizens, at a meeting held here on Tuesday night of this week, decided to take positive steps toward maintenance of friendly relations between the whites and the Negroes of Clarke County. The group meeting here included county and city officials, legislators, leaders of farm activities, and others.

A few Negroes, recognized as representative members of their race, had been invited from every beat in the county, and a goodly number of those invited was present. Necessarily, the number invited from each precinct had to be limited.

It was the concensus of opinion at this first meeting that a vast majority of the whites desire to continue friendly relations with the Negroes and that a similar majority of the Negroes is equally desirous of maintaining friendly relations with the whites.

It would be nothing short of tragic if paid agitators and professional troublemakers were permitted to come in here and disrupt the conditions under which the two races now function so smoothly and under which the Negro race is making such rapid advancement.

As stated previously, we are definitely in favor of a biracial organization in this county. It will afford a medium for bringing leading members of the two races together for friendly discussion of such problems as may exist.

Such an organization is imperative in this time of crisis. It should be composed of the best members of both races, men who are tolerant of the views of others and who will study with sympathetic understanding all problems coming before them.

As far as can be judged, the racial antagonism which is doing so much harm in other sections of the State, is conspicuously absent here. Instead, there is the same friendly spirit between the races which has existed for many years. With the two races cooperating, it can be kept that way. Let's do it.

BOTH RACES AGREE PRESENT PLAN BEST—NEGROES ASK BETTER SCHOOLS AND WHITE SPEAKERS SAY THEY WILL BE BUILT

Whites and Negroes met at the courthouse Tuesday night in a meeting called to discuss the issues now creating friction between the races and to assure a continuation of the friendly relations now existing between the races in Clarke County.

Two weeks ago the county officials, mayors of the various municipalities, and a few others had met here to lay plans for this meeting. At that time it was decided to issue invitations to a few of the Negro leaders throughout the county to meet with this group. Invitations were extended to farm leaders, teachers, preachers, and other representative citizens.

The Negroes responded to this invitation in a manner which showed that they are just as much interested in maintaining friendly relations as are the whites.

Judge Coma Garrett presided at the meeting, which was attended by practically all county officials, the county's senator and two representatives, all of the county's mayors, many councilmen, most of the candidates for office and numerous other citizens.

After the meeting had been opened with prayer by the Reverend Charles Granade, County Agent O. C. Helms stated the purpose of the meeting. In his remarks he referred to the wonderful progress that had been made by both whites and Negroes during the 25 years he has been in Clarke, and stated the hope that nothing should be permitted to interfere with the continuation of this progress.

Mr. Helms was followed by Senator Gerald Bradford, who spoke for the lawmakers. He warned that outside influences were seeking to break down the friendly relations which have existed between the races for many years and that neither he nor any of the other whites present wanted to see this occur. He stated that we must work out our salvation along the same lines which we have followed in the past, with each race having its own schools and teachers, its own churches, its own society. He also stated that a Citizens Council was to be organized on Thursday night of this week and that he and the other officials were going to join it so as to be assured that it would be composed of members friendly to the Negro and understanding his problems.

Jacob D. Thorn, representing the board of education, spoke next. He briefly but emphatically stated that it was the object of the board to see that both Negro and white schools were brought to a higher level and that new school buildings were to be erected at the earliest possible time for the Negroes at both Jackson and Coffeeville. He was given the most enthusiastic reception of any speaker of the evening.

Walter Wilde Andrews, mayor of Jackson, spoke briefly for the mayors of the county, assuring the Negroes that the whites held nothing but friendship for them and wanted to see this friendship continued.

Judge Garrett spoke next for the county officials. He, too, spoke of the progress the two races have made together, stated that both races wanted to see this progress continued, but warned that it must be continued under the existing plan of segregation. He stressed better schools for the Negroes, as other speakers had done, and continued friendly relations along all lines.

County Solicitor J. E. Adams, Jr., spoke for the lawyers. He mentioned the fact that a citizens council was to be organized and stated that those friendly to the Negroes expected to join to assure a friendly attitude. If this could not be done, he said, he would have none of it.

Rev. J. B. Dixon, veteran minister of Thomasville, was first to speak for the Negroes. He and those who followed expressed appreciation for the spirit of the meeting and gave assurance that their race wished to travel along the same lines as outlined by the whites. Others speaking for the Negroes were Charles P. Montgomery, Iris Bell, George Beckham, Warren Kilpatrick, Donnie Foster, Warren May, Johnson Daffin, and Rev. Chris Frowner.

At the conclusion of the talks Judge Garrett asked all whites present who wished to see friendly relations continued as present to please stand. Everyone stood. When the same proposition was put to the Negroes, their response likewise was unanimous.

Appointment of Maj. Gen. Garrison H. Davidson as Superintendent of USMA at West Point

---

EXTENSION OF REMARKS

OF

HON. WILLIAM H. AVERY

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 28, 1956

Mr. AVERY. Mr. Speaker, the people of First Congressional District of Kansas have always deemed ourselves most fortunate to have the illustrious Command and General Staff College of the United States Army situated at Leavenworth, Kans. To this famous school of military learning come the keenest minds of our own Army and its sister services and those of other great nations allied with us in the cause of freedom. From the college over the years have graduated the great military leaders of the past century; MacArthur, Eisenhower, Patton, Bradley, and a host of other distinguished field commanders.

It is only fitting that this school be led by men of stature and vision. This requirement has, of course, been seen to in the past by the Army Chief of Staff who has unfailingly sent only the finest men to be commandants of the college. In all fairness to those who have gone before, I submit that the present Commandant, Maj. Gen. Garrison Holt Davidson, must be counted among the very best. My remarks this morning are taken upon the recent announcement that General Davidson, after excellent service since July 1954, is about to depart from the Command and General Staff College to become Superintendent of the United States Military Academy at West Point. We are reluctant, indeed, to see this outstanding officer leave our midst in Kansas, but we rejoice in the fact that he has been selected to lead the long gray line in which he himself once stood many years ago as a cadet.

Garrison H. Davidson was born in the Fordham section of New York City on April 24, 1904, and graduated from the United States Military Academy, West Point, N. Y., with a bachelor-of-science degree on June 14, 1927, when he was appointed a second lieutenant in the Corps of Engineers. His initial assignment was as assistant football coach at the Academy in September 1927. From then until the fall of 1930, he alternated between coaching at the Academy each fall and service as a platoon leader with the 1st Engineers at Fort Du Pont, Del., and Camp Dix, N. J. After the 1930 football season he remained at the Academy as an instructor in the Department of Natural and Experimental Philosophy, doubling as assistant football coach each fall.

In October 1932, when still a second lieutenant, he was chosen as head football coach at the United States Military Academy. He is the youngest to have held that position in which he remained until June 1938.

In July 1938, he was transferred to Hawaii for duty. He commanded a company of the 3rd Engineers, Schofield Barracks, for a year and served as assistant G–4 of the Hawaiian Division his second year there. In July 1940 he was detailed as airbase engineer, Hamilton Field, Calif.

In January 1941 he was detailed to duty in Washington, D. C., with the construction division of the Office of the Chief of Engineers and was assigned staff supervision over the near billion dollar program of construction and expansion of the ports and supply depots throughout the United States in preparation for World War II. He served in this capacity until September 1942 when he was named executive officer to the engineer of the Western Task Force, which invaded North Africa under General Patton 2 months later. In November 1942 he became General Patton's engineer in the First Armored Corps in the North African Theater of Operations and served in that capacity in North Africa and later when the corps became the Seventh Army on D-Day in Sicily.

Commenting on the performace of the engineer troops in Sicily, General Eisenhower stated:

Only through the engineers has the end of the campaign come so quickly.

At the close of the Sicilian campaign, military insignia not being available locally, General Patton pinned a pair of his own stars on him, when at the age of 39 he became one of the youngest general officers in the ground forces.

During the month following General Patton's departure from the Seventh Army and prior to General Patch's arrival he "commanded" the Seventh Army, then a planning headquarters. In this capacity he was called on during this period to recommend the area of Southern France into which the assault from the south should be launched. He named the area between Cavalaire and Agay on the Cote d'Azur which was not changed during the months of further study and planning that followed and where the assault was made 4 or 5 months later. He continued as army engineer under General Patch throughout the campaign in France and Germany.

Of the performance of the engineer troops in the landing in southern France and the pursuit of the German forces up the Rhone Valley to the Vosges, General Patch commented:

The engineer support of the operation of the Seventh Army was the highlight performance of the Army.

He pinned the Distinguished Service Medal on him in Saverne, Alsace-Lorraine.

In July 1945, he became president of the first German War Crimes Commission in which capacity he conducted the first mass trial of German war criminals at Darmstadt, Germany, preceding the Nurnberg trials. In August 1945, he was appointed engineer of the ETO force commanded by General Patton.

In March 1946, back in the United States he was assigned to Headquarters, Sixth Army, as engineer. In September 1947 Gen. Mark Clark appointed him as his chief of staff. He continued in that capacity after General Wedemeyer took command.

In August 1950, he was assigned to the Eighth Army in Korea, and appointed Assistant Division Commander of the 24th Division. While serving in this capacity he commanded several task forces notably one which eliminated the last North Korean penetration of the Naktong bridgehead north of Anju on the Chongchon River against which the first Chinese intervention was stopped in the first week of November 1950. In February 1951, he was assigned to Headquarters Eighth Army and designated to supervise the construction of several defense lines, notably the defensive line north of Seoul against which the Chinese operation of April 1951 piled up and was stopped. In May 1951 he was appointed Acting Chief of the Korean Military Advisory Group in which capacity he served until July 10, when he returned to the Zone of the Interior.

Since July 1951, he served the Weapons System Evaluation Group in the Office of the Secretary of Defense. In July 1954, General Davidson was named Commandant of the Command and General Staff College and has won our unqualified respect and admiration since that time.

He was awarded the Distinguished Service Medal, with Oak Leaf Cluster, the Legion of Merit, the Bronze Star Medal, the Commendation Ribbon with Oak Leaf Cluster, the Presidential Unit Citation, the Legion of Honor—French—Croix de Guerre—French—Commander, Order of the British Empire, and the Korean Presidential Unit Citation.

General Davidson wears 13 battle stars; 7 of World War II and 6 from the Korean campaign. He also wears the Bronze Arrowhead for assault landings at Fedala, French Morocco; Gela in Sicily; and St. Tropes in southern France.

Perhaps it is only indicative of the quality of the man and the high esteem in which General Davidson is held by his superiors to note that at 39 he was the youngest brigadier general in the United States Army.

We, the people of the First Congressional District of Kansas, wish General Davidson every happiness and success in his new assignment and in the fine future that must certainly be in store for him in the Army.

Independence of Greece

EXTENSION OF REMARKS
OF
HON. JAMES A. BYRNE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 28, 1956

Mr. BYRNE of Pennsylvania. Mr. Speaker, the 135th anniversary of Greek independence from the Ottoman Empire was observed on Sunday, March 25, 1956, and I am pleased again to pay homage to that land from which much of our own culture sprang. Also to participate in the more recent efforts of Americans of Greek descent to help in effectuating the union of Cyprus with Greece, the motherland.

We, as present-day American citizens, in this land of the free, cannot quite comprehend alien tyranny as being experienced by so many peoples at the present time. Yet, in spite of such tyranny, these groups have remained true to their ancient traditions, cherishing the ideal of national independence.

The world is today looking to England to see what her position will be regarding the early return to Cyprus of their recently exiled Archbishop Makarios, one of the highest church officials of the Orthodox faith on the island of Cyprus.

A famous English writer, H. G. Wells, with whom we are all familiar, said in his Outline of History that "the British acquired the island of Cyprus to which they had no right whatever and which has never been of the slightest use to them." Other English scholars and writers have similar views on enosis, which stands for the Cypriot movement aimed at the union of Cyprus with the Greek motherland. Back in 1880 Prime Minister Gladstone was sympathetic to this cause and so expressed himself, but the then Queen of England would not consent to the cession of Cyprus, and Gladstone announced that although he was very anxious for the happiness of the Cypriots he regretted he was bound by treaties which he could not break. More recently, the British press has made statements favoring the union of Cyprus with Greece and condemned the negative attitude of Prime Minister Eden and his colleagues.

All this has dampened the spirit of elation in Cyprus which is usually felt on Greek Independence Day, but we continue to hope and pray for early action that will result in self-determination for Cyprus, and for lasting peace and freedom for Greece.

Greek Independence Day

EXTENSION OF REMARKS
OF
HON. CHARLES C. DIGGS, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 28, 1956

Mr. DIGGS. Mr. Speaker, March 25 was celebrated as Greek Independence Day, and, under unanimous consent, permission is requested to extend in the RECORD the following remarks in commemoration of the occasion:

GREEK INDEPENDENCE DAY, MARCH 25

Of all the Balkan peoples who had lost their national independence and were more or less amalgamated in the polyglot Ottoman Empire, the Greeks were one of the first to cast off the conqueror's unbending and unrelenting tyranny and regain their political independence. For more than 300 years Greece's glory was buried in the many historic sites of that memorable land, and for a while almost forgotten in the West. Only through books in schools and by the sketchy accounts of wayward sojourners did the West casually hear of Greece during those

dark days. But to the Greeks themselves their past greatness and glory served as a source of inspiration, an inspiration to reawaken, rekindle and revive the idea of national political independence. Even though no major effort was made openly, prior to the 19th century, in the attainment of their national goal, Greek leaders cherished the idea and preached it from generation to generation until all Greeks were nurtured with this noblest and most infectious of ideals.

In March of 1821 the dauntless Archbishop Germanos, of Patras, unfurled the banner of revolt against the Ottoman oppressors and led his brave band of followers from the Lavra monastery against the Turkish garrison, confidently hoping to recreate Greece as an independent political entity. Fortunately for the Greeks and also for all ardent supporters of Greece's righteous and humanitarian cause, people from all parts of the country rallied to the call. In the course of many years of continuous and bitter fighting, often against innumerable odds, the Greeks were finally successful in expelling the unwanted invaders and proclaiming their independence.

Since that memorable March 25, 1821, the Greeks have moved ahead with tremendous strides. They have also had their share of misfortune, sometimes perhaps more than their share. Particularly during the Second World War and for years afterward the Greeks suffered and sacrificed much, first at the hands of cruel invaders and then in their deadly struggle against Greek and non-Greek Communists. And we all should be proud to say that we helped in this struggle. We Americans are glad to have rendered financial and military assistance, and we are gratified at the excellent use which the Greeks have made of that assistance.

The spirit of independence is perhaps a most characteristic trait among the Greeks. And the spirit of union of all Greeks under one political sovereignty is another. It is the combination of these twin ideas which is giving rise to much clamor on the island of Cyprus. The claim of Cypriot Greeks that the island is Greek in everything except its administration is neither contested nor denied. But considerations on the level of international diplomacy seem to be hindering their union with the Greeks in Greece. That is most unfortunate for all concerned: for the Greeks, for the British and for us. In any case, we must all ardently hope and pray that mature and sane counsels will prevail upon those who are dealing with the political fate of Cypriot Greeks and that the day will not be distant when all Greeks can celebrate their independence day as one, united people.

Christian Arabs in Israel Army

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 5, 1956

Mr. MULTER. Mr. Speaker, permit me to direct the attention of our colleagues to the following article concerning the formation of a special Israel defence force unit for Christian Arabs. The article appeared in the March 2, 1956, issue of the Israel Digest:

FIRST CHRISTIAN ARABS JOIN ARMY

HAIFA.—The first organized group of Christian Arab youths to volunteer for the Israel defense forces were given a festive sendoff with beer, sausages, and speeches here last week. After a brief ceremony at the Histadrut Trade Unions' Department headquarters, the young men were marched off by an Arab corporal, already in the army. All of the young men resigned from jobs in the vicinity of Haifa to join the Israel colors.

The formation of a special Israel defense force unit for Christian Arabs follows the request for its establishment recently lodged with President Izhak Ben-Zvi by Christian community leaders.

Druze citizens will now be conscripted for a regular 2½-year period of army service. For the past 8 years, a separate Druze unit, made up of volunteers, has been in existence. The introduction of the formal conscription of Druze citizens was requested by the Druze community.

Last week, the first formal conscription notices were mailed to Druze youths, and newspaper announcements informed Druze youngsters approaching their 18th birthday that they must register for army service.

Pay Hike Asked in Air Force To Obtain Skilled Men

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 26, 1956

Mr. HOLIFIELD. Mr. Speaker, for the past 10 years the sole deterrent to Soviet aggression has the retaliatory striking power of the United States Strategic Air Command.

On the 21st of this month the Air Force will be commemorating the 10th anniversary of the establishment of this organization. For these 10 years the Strategic Air Command has remained on constant alert. Through intensive and perpetual training the Strategic Air Command today posseses the potential of carrying nuclear weapons to any spot on the globe.

During these past 10 years the Strategic Air Command has come a long way. Its World War II equipment has for the most part been replaced by modern jet bombers and fighter bombers. Its mainstay, the B–36, which has so effectively deterred the Soviets though it has never dropped a bomb in anger, is now being gradually replaced by the B–52, a high-speed, jet-propelled, intercontinental bomber.

Today over 197,000 men operate, maintain, and administer this vital component of our national defense.

We as a nation have come to accept the existence of this force. But unfortunately, in this acceptance many have tended to overlook the most vital element of this force.

It is the tendency to think of the Strategic Air Command as being composed of nothing but B–47's, B–36's, and B–52's. The fact of the matter is, however, that what has made the Strategic Air Command great in the past and will keep it invincible in the future is the people that go to make up this fine organization.

It is, therefore, somewhat disturbing to note that as the strategic bombing capabilities of the Soviet Union improves by leaps and bounds, our country's strategic bombing capabilities are being limited because of a grave shortage of key skilled mechanics and operating personnel. This shortage, coupled with an unbelievably high turnover in newly trained technicians represents an unbelievable dollar expense. But, more important, it has resulted in a serious lowering of the combat readiness of our Air Force's long-range striking power.

This situation, if permitted to continue, could lead to national disaster.

The terrible destruction that can be wrought by a nuclear attack on this country makes it absolutely imperative that our bombers not be caught on the ground. The Strategic Air Command must be ever ready to be on its way with a crushing counter blow as soon as any aggressor moves against us.

Recently the Washington Post and Times Herald carried a series of articles by Mr. John G. Norris, outlining the serious personnel problems that beset the Strategic Air Command. These articles show without a doubt that this is SAC's Achilles' heel. These articles pointed out how today more and more SAC bombers are aborting on training missions because of improper maintenance caused by the loss of skilled personnel. They describe how many of SAC's strategic bombers are temporarily out of operation each day because of mechanical difficulties.

Mr. Speaker, the Strategic Air Command has done much to tackle and solve its personnel problems. It is doing all it can to retain these skilled people. However, much more yet remains to be done. Many of these problems can only be eliminated through the help of the American people and this Congress.

Mr. Speaker, under leave to extend my remarks, I insert in the RECORD the last of the series of articles written by Mr. Norris and which appeared on March 14 in the Washington Post and Times Herald. I strongly urge the reading of this article by all of my colleagues:

PAY HIKE ASKED IN AF TO OBTAIN SKILLED MEN

(By John G. Norris)

(Last of a series)

OMAHA, NEBR.—The Strategic Air Command is proposing a sweeping revision of the military pay system, as one answer to its critical manpower problem.

Faced with a grave shortage of skilled men in its bomber maintenance crews, SAC Headquarters has worked out a comprehensive plan to lower the unacceptably high turnover rate in some key enlisted skills.

The proposed pay change—one of many actions urged—would gear military wages to rates paid by industry for similar work.

Early action in the matter is urged. For the present situation has proven very costly. Worse, it is lowering SAC's combat readiness.

Other military and civilian organizations face similar problems, and have to live with them. But SAC and perhaps a few other "front line" forces, occupy a unique position today. Russia's growing air-atomic power make it more important than ever that this Nation's nuclear striking arm be instantly ready.

If a sudden hydrogen bomb attack should catch SAC on the ground, or its bombers be

otherwise unable to deliver a devastating counter-blow, the Nation would be open to destruction. Therefore a satisfactory answer to SAC's readiness troubles becomes a national concern.

SAC's action program tackles the problem along a wide front. Some proposals require congressional or top Pentagon action.

One phase involves putting the heat on aircraft designers to build less complicated equipment, so that it can be maintained by less skilled men. "We can get geniuses to design them but can't have an Air Force of geniuses to service them," said a SAC officer.

MAY RAISE STANDARDS

Another proposal is to let the Air Force raise its recruiting standards. Pentagon regulations now force it to take a proportionate share of lower IQ men, who formerly went into the Army via the draft. SAC says many of the men it receives are "untrainable."

Other recommendations are aimed at making life in SAC more attractive, and thus inducing high caliber men to reenlist and sign up for longer term contracts. Last year's military pay raise and increase in reenlistment allowance helped, officers say, boosting the SAC reenlistment rate from 26 to 35 percent.

But the trouble is that the percentage varies widely in various specialties. Sixty percent of SAC cooks are signing up for another term when their enlistments expire, while only 10 percent of the command's skilled radarmen are reenlisting.

"By civilian standards we are overpaying some people and underpaying others," said Capt. John Murray, of Hazel Green, Wis., a SAC personnel officer. "Surveys show that the wage scale for cooks on the outside is $1.80 an hour or less, while an electronics supervisor at Boeing Aircraft gets $2.60 an hour.

"But the top pay of an Air Force cook and an Air Force electronics supervisor, both master sergeants, is the same—$2.35 an hour based on a 40-hour week. We have 239 job specialties and only 7 pay grades."

HIKE FOR OFFICERS, AIRMEN

SAC officers did not spell out their new pay plan in detail, but indicated it would adjust scales to what private industry pays for similar skills.

It was clear that the plan, not yet in final form, will apply to officers as well as airmen. Personnel officers stressed that SAC aircraft commanders make only $500 to $700 a month, while a commercial airline pilot makes from $15,000 to $20,000 a year—more than SAC's top generals.

While there is no current shortage of pilots, trouble lies ahead. Seventy percent of SAC's aircraft commanders are aged 30 to 38, and at some point in the future, they'll be getting too old for their job en bloc.

There may be difficulty in replacing them several years hence. For there is a great shortage of officers in the 25 to 30 age bracket. The great majority of college-trained ROTC graduates have been leaving the service as soon as they serve their obligated time.

Another problem is expected when the airlines begin replacing their present airplanes with jet transports 3 years hence. SAC B–47 pilots already have been getting feelers for airline jobs.

LEGISLATIVE PROPOSALS

Other legislative proposals urged by SAC to improve career attractiveness include:

More family and military housing.

Medical care for dependents. Legislation now is pending for this.

Expansion of commissaries and PX's, and cancellation of the present restrictions on the goods they can carry and prices charged. Commercial retail-store organizations have pressured the Pentagon into such limitations.

Amendment of the GI Educational Act, so that men who remain in service can go to school in off-duty hours at Government expense. A large proportion of the airmen who decline to reenlist say they do so to go to college free under the GI bill.

One step already taken to encourage men to remain in service is to arrange for accredited college courses to be conducted for officers and airmen on or near bases. But they must pay for it.

Correction of a present situation which is causing much bitterness among many airmen. Officers receive a subsistence allowance on a monthly basis, enlisted men on a daily basis. When individuals or units leave their permanent base on temporary duty at schools or other stations—and this is frequent in SAC—the airmen lose their allowance and the officers don't.

Additional allowances to ease rough spots faced by the men of SAC, such as extension of quarters allowances for airmen with dependents, per diem payments while on maneuvers, and raising rental and subsistence allowances in high-cost-of-living areas.

STEPS ALREADY TAKEN

SAC already has done a great deal to make life more attractive for its people.

It has established NCO academies, to which sergeants are sent for leadership and business-management training. Graduates gain prestige.

A dependents' assistance program has been set up, largely a voluntary organization of wives of officers and noncoms, ready to step in and help families during illness or other trouble.

Recognizing the importance the little woman plays in a man's decision on reenlisting, SAC commanders give talks to the wives before the dependent's assistance groups, in which they outline SAC's important role, their husband's part in it, and stress the advantage of an Air Force career.

Gen. Curtis E. LeMay, SAC commander in chief devised an attractive new type barracks for unmarried airmen.

They feature rooms for two or three airmen instead of the normal open bay type barracks, and a bath between each two rooms. But very few have been built.

HOBBY SHOPS CREATED

The most interesting of SAC's morale innovations, however, are the hobby shops. LeMay, a sports car fan, has established an automobile hobby shop at each base where an airman can take an old jalopy, and with help from crack mechanics, make it run like a clock.

At Finecastle Air Force Base, in the Florida lake section, the auto hobby shop has a rival in a highly popular boat-building hobby shop.

There are also the SAC aera clubs. Ground officers and airmen can join and learn to fly at minimum rates. Air Force pilots serve as unpaid instructors and the clubs may buy light planes which can be rented to members. Ground officers and airmen, once they win their private pilots licenses, can fly home for vacations at $5 a flying hour instead of the commercial $18 rate.

All these things help. But SAC needs assistance to solve its critical manpower problem. It must have sympathetic and prompt attention to its proposals by top level Pentagon officials and Congress. And public understanding and support.

Greater appreciation of the worth, and higher prestige, accorded military career men, can pay big dividends.

United Regular Democratic Organization of the 16th Assembly District, Kings County, Asks Arms for Israel

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 5, 1956

Mr. MULTER. Mr. Speaker, I desire to direct to the attention of our colleagues the following resolution of the United Regular Democratic Organization of the 16th Assembly District, Kings County. The resolution offered by Dr. Joseph Cavallaro, president of the New York City Board of Higher Education, and adopted on March 1, 1956, expresses the organization's concern over disturbing developments in the Near East and urges that our Government make available to Israel the arms so vital and necessary to her self-defense against Arab and Communist aggression.

The resolution was seconded by Councilman Edward Vogel, the executive member and leader of the 16th Assembly District.

The resolution follows:

RESOLUTION

Whereas we, the members of the United Regular Democratic Organization of the 16th Assembly District, Kings County, Brooklyn, N. Y., viewing with alarm the Communist arming of Egypt and other Arab States, the mounting threats to the existence and independence of Israel and to the peace and security of America, the attacks upon American institutions and insults to the American Flag in Arab countries and the failure of our Government to take necessary measures to meet the growing danger to democratic Israel and the free world; and

Whereas we are impelled to register our deepest concern about the disturbing developments in the Near East: Now, therefore, be it

Resolved, That we call upon President Dwight D. Eisenhower and Secretary of State John Foster Dulles and earnestly urge them and our Government to restore equilibrium and strengthen the American position in the Near East by making available to Israel the arms, vital and necessary to her self-defense against Arab and Communist aggression; to immediately negotiate security treaties with Israel and with any of the Arab States in the region that honestly desire to live in peace with their neighbors and to use its good offices to bring Israel and the Arab States together in direct negotiation looking to the settlement of their differences and the attainment of an honorable peace in the Near East; and be it further

Resolved, That we trust that the United States will always be guided by the highest moral and ethical principles, will not swerve from the path of justice and will continue determinedly to uphold Israel's independence and the integrity of its borders, strengthen democracy and build prosperity in the Near East and thus serve the best interests of America and the free world; and be it further

Resolved, That a copy of this resolution duly authenticated by the President and executive members of our organization be

forwarded to President Dwight D. Eisenhower, Secretary of State John Foster Dulles, United States Senator HERBERT H. LEHMAN, United States Senator IRVING M. IVES, and the Brooklyn delegation of the United States Congress, namely, Congressmen VICTOR L. ANFUSO, EUGENE J. KEOGH, EDNA F. KELLY, EMANUEL CELLER, FRANCIS E. DORN, ABRAHAM J. MULTER, JOHN J. ROONEY and JOHN H. RAY.

THE UNITED REGULAR DEMOCRATIC ORGANIZATION OF THE 16TH ASSEMBLY DISTRICT, KINGS COUNTY,
HUBERT M. CASE, *President.*
EDWARD VOGEL, *Executive Member.*
VICTORIA RAPP, *Executive Member.*

(Unanimously adopted at meeting held at headquarters of the United Regular Democratic Organization of the 16th Assembly District, 25 Bay 25th Street, Brooklyn, N. Y., the 1st day of March, 1956.)

Mortimer, Confidential

EXTENSION OF REMARKS
OF
HON. HAROLD H. VELDE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 19, 1956

Mr. VELDE. Mr. Speaker, a very good friend of mine, Lee Mortimer, has "done it again." He has written and had published, by a patriotic and legitimate publishing firm, a dynamic and true story of sin and evil of worldwide proportions. The title of his story is "Around the World Confidential."

Just as in Chicago Confidential, New York Confidential, and Washington Confidential, Mortimer's new story is based on facts, which he discovered on a trip around the world following the premature death of his lovely wife, Ann.

The New York Times, a respected and worldwide read newspaper, noted for its continuous endeavor to protect the freedom of the press, has refused to review Mortimer's Around the World Confidential. And, as a further exhibition of protest, has refused to accept ads for the book. I wonder why?

In lieu of an answer from that famous newspaper at this time, I am including in my remarks a review of the book written by a sage and courageous newspaper man, Gomer Bath, an editorial writer for the Peoria Journal Star, of Peoria, Ill.:

STRAWS IN THE WIND
(By Gomer Bath)
MORTIMER, CONFIDENTIAL

Lee Mortimer's new book, Around the World Confidential, will shock, horrify, anger, and delight many readers. And it will be denounced around the world, just as United States Confidential was from coast to coast in this country.

For he has laid his facts on the line, as honestly and brutally as he and the late Jack Lait did in the other confidential books. And if there is one thing people cannot tolerate, it is having their sins exposed where they may be examined in detail by everybody.

Every American city Lait and Mortimer gave the confidential treatment to screamed, "It's a lie." But the denials didn't cancel the facts. And the fact contain the most delectable scandals ever pointed out behind the pretty window dressing of the contemporary American scene.

Lee Mortimer carries on in the same tradition, now that his former coauthor is dead. Mortimer is a brilliant report and a writer of crisp, exciting copy. Some wouldn't admit it, but I doubt if there is an ambitious newspaperman in the United States who won't envy him for the job he has done in Around the World Confidential.

Speaking of forthcoming denunciations from all over the world, the most savage will probably emanate from England. For immediately after his prologue, Mortimer goes to work on London Confidential.

Homosexualism, he finds, is so common in London that efforts have been made to give its practices legal sanction. Homosexualism, he reveals, played an important part in the great diplomatic scandal when Maclean and Burgess ran to the Iron Curtain for protection.

Perversion is so common, he finds, that "several members of parliament are on the police warning list, at least one prominent London columnist who is also on TV, scores of show people and some peers."

And girls. Mortimer finds things no different than when Disraeli said to Queen Victoria, "Ma'am, put a roof over England and you have a brothel."

Mobsters? London has 'em. They thrive on dope peddling and the local hoods take instructions from Mafia chiefs in the United States.

A full 100 pages of the book are devoted to London. Other cities around the earth do not get such full treatment, but in a series of rapid summaries you will learn that sin manifests itself in about the same ways in Copenhagen, Hamburg, Paris, Rome, Cairo, Istanbul, Singapore, Tokyo, and Hawaii.

Let's take a few seconds out here to explain a self-evident fact that many horrified readers of the Lait-Mortimer books never were able to grasp. Lait and Mortimer never made any pretense of reporting all aspects of the cities they visited. Yet people are always wailing, "They paid no attention to our good points." Don't expect the beauties or virtues of any cities around the world to be detailed—or even mentioned—in Around the World Confidential. It isn't a travel guide. It is a report on wickedness.

If you are a fuss-budget, leave this book alone and comfort yourself with the inanities of John Gunther.

But if you have a strong stomach and a normal amount of human curiosity, open Mortimer's book at any page and I dare you to stop reading.

A British writer, several centuries ago, sagely observed, "He knows not what is good who knows not what is evil."

This should soothe any conscience that tends to feel pain as the reader enjoys the clinical inspection of much of the world's cussedness.

Arab Refugees and the Refugee Relief Program

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 7, 1956

Mr. MULTER. Mr. Speaker, we are well acquainted with the plight of the Arab refugees who left Palestine 7 years ago. Today they are still encamped on the same squalid sites that were made available to them as temporary quarters. The Arab leaders have continuously obstructed any plans to find permanent quarters for these refugees. It is plain that they have no intention of relieving the situation of these homeless persons, for the simple reason that the elimination of this issue would remove most of the emotionalism from the Arabs' campaign against Israel. As evidence of this fact, I wish to call attention to figures recently released by the Office of the Administrator of the Refugee Relief Act of 1953.

As of February 10, 1956, only 1,889 Arab refugees applied for visas to come to the United States under the refugee relief program. These applications were filed on the part of refugees in just two Arab countries—1,021 applications being from Jordan and 868 from Lebanon. There have been no applications from any of the other Arab countries. Moreover, certain of the Arab countries remain outside the operative scope of the refugee relief program because they have been unwilling to sign readmission certificate agreements as required under the provisions of the Refugee Relief Act. Those countries are Iraq, Saudi Arabia, Syria, Bahrein, Oman, and Yemen.

Certainly if the Arab leaders were sincere in their protestations of sympathy for their refugee brothers, many more thousands of applications would have been filed on behalf of Arab refugees. In my opinion, the figures show convincingly that the Arab leaders have no interest in the resettlement of these refugees but, rather, intend to exploit the situation as an excuse for their incursions into Israel.

American Business and American Citizens Also Have Responsibility for International Affairs

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 28, 1956

Mr. HOSMER. Mr. Speaker, I have noticed a growing understanding that the control which we the United States can exercise over the relations between and amongst nations of the world has its limits. We can urge, suggest and set an example, but we cannot dictate what attitude one sovereign nation shall take toward others.

When crises arise, as in the Middle East today, the United States cannot impose immediate solutions, but only use its restraint, wisdom and influence toward their peaceful resolution.

I have also noticed a growing realization that the job of maintaining good international relations is not solely the responsibility of the President and the State Department. Both American business and individual American citizens have a responsibility in this regard that must be accepted.

The following editorial by Lawrence A. Collins, Sr., recently appeared in the Long Beach Independent newspaper. It

points out an instance in which an American business apparently has failed to assume its responsibility in this regard, or has not, perhaps, understood it:

GUYS AND DOLLS

We saw a picture of four beautiful, sparkling young show girls getting ready to leave on a world cruise to promote the motion picture Guys and Dolls. It means this picture is to have all the glamour of Hollywood taken to all countries of the world. The picture is supposed to be a part of the American way of life as lived in New York City. Actually it is a story glorifying gangsters, bootleggers, race track touts and the complete sordidness of that level of society.

As a beautiful colored picture it is splendid. But when it is taken to foreign countries with all the glamour that accompanies a Hollywood opening night it becomes a major American attraction. The people who see it will not view it as a fairytale as most Americans do. They will view it as a way of life here just as they do most of our motion pictures. There is enough propaganda in the picture from that standpoint to furnish the Russians all they need to prove our decadence.

One of the big scenes in the picture is a big crap game in the sewer below the streets of Manhattan. The characters are all racketeers—but such likable fellows. The hero is a big-time racketeer who, on a bet, entices a mission girl to go to Habana with him. The racketeers finally fill up the mission for a big meeting—on a bet. The mission is used by them one night for one of their big crap games.

It is bad enough for us in this country to glorify such creatures to the young people who get such a kick out of the show. To take it to foreign lands as a great and respectable production will hardly raise us in the estimation of the people of those lands. It is quite different from the touring of Europe and Moscow by the Porgy and Bess company with its beautiful music and scenery. How much more appropriate it would be to make the same effort to show A Man Called Peter as one of our great motion picture productions. Some of our finest entertainers have made us respected in those foreign lands.

The story of Guys and Dolls was written by Damon Runyon who spent much of his time in the company of racketeers in New York City. It was shown after his death that he had an obsession in his love of the characters. When he wrote Guys and Dolls he showed his obsession as was shown by the testimony of his son after Runyon's death. In his story he disregarded the sordid crookedness of the racketeers and substituted kindly characteristics he may have seen in them. But anyone who has associated with gamblers and others who live off the suckers knows them to be a ruthless, un-American class deserving no consideration. It will not do this country any good to have the picture glamorized as an acceptable way of life in this country.

A letter also has come to my desk recently in which the writer, Mr. Ed Wolff, of Long Beach, Calif., points out ways in which individual American citizens could be prepared more adequately to do their share of our international relations job:

LONG BEACH, CALIF., *March 24, 1956.*

DEAR MR. HOSMER: All right, since you ask for it, here is my opinion regarding the money we're sending, as cash or equipment, to foreign countries. I believe it to be largely wasted, and futile, as now administered.

My background on such matters is that I'm a retired head of a New York advertising agency, in which semiprofession the principal requirement for success is a clear knowledge of how people react to a given stimulus. I succeeded. I'm retired.

1. You can't buy friendship; you have to win it. How much friendship would you gain from an impoverished family near your home if you merely sent over some of your surplus food and mechanical items that you could spare? Especially if you yourself did not appear in the picture, and sent these goods for distribution by some ward heeler in the area? You wouldn't win friendship or loyalty—merely envy that you had so much while the recipients had so little. And envy breeds dislike. As with families, so with nations.

2. People don't want charity. They sometimes accept it, but they don't like it. The manner in which donations are given governs the response from the donee. If the donor manifests, and states clearly, that he likes and admires the recipient, and is only helping out as an act of friendship, that takes most of the sting out of charity, whether on a personal or a national scale. To win the maximum appreciation and friendship (personal or national) is to learn first what the prospective recipient wants—not what we believe he wants. Then give him what he wants most, handed him by the donor or an official representative of the donor, with unmistakable expression, verbally (or printed in newspapers, via radio and TV in the case of nations) that such gifts are a gesture of appreciation by the donor of the high aims and admirable character of the donee. To let the top officials of a nation spread around what we send is to strengthen the hold of those officials on the people, while in no way arousing friendship for ourselves. Ask any traveler recently returned from Italy, Germany, France, and other countries that we have helped. Ask how Americans are welcomed by the people of those countries. "Marked discourtesy" is the answer you may expect. I've interviewed such travelers. I know.

3. Every separate package of food, every item of equipment, etc., should be plainly labeled something like this: "Sent as an expression of admiration and friendship by the people of the United States of America, to the people of (whatever country gets the items)." These should be distributed by Americans on the ground, at least as superintendents of the distribution. Every consul, every United States official in each such country should hand out press releases backing up such statements of friendship and admiration, should as much as possible take all steps necessary to make the natives feel that we Americans do like and admire them, as proved by the actions of our representatives in that country. Don't bother too much about the officials; they'll bow to public sentiment if it's strong enough.

4. Travel agencies and transportation companies should be requested by high officialdom in Washington to hand to each prospective traveler abroad a short pamphlet, telling such Americans what not to do, as well as what to do, in foreign lands, in order to arouse liking for Americans there. E. g., one American salesman had been given an order for $50,000 worth of American goods by an Arab sheik. He glanced over the order, said, "What! No pork and beans?" The Arab took back the order and tore it up. Pork? To an Arab? Speaking of United States money as "real money," and of this country as "God's country," a habit with many Americans, does not arouse kind feelings abroad. Snapshotting religious or traditional observances of a religious nature doesn't endear Americans to foreigners. Nor do jeering remarks regarding local customs. If we want respect given to us we must give it to others. And, with our current prosperity, many of us travel abroad because we can afford it and not because we have the social, educational, and cultural background necessary to win the respect of foreigners. Just because foreigners are different from us in some ways does not make them inferior. Who enjoys being sneered at?

In brief, our money and goods sent abroad to aid the people there should be sent under some such conditions as these:

1. Learn conclusively what those people want;

2. Learn conclusively how they want it given them;

3. Identify each separate item as coming from the United States of America and as a token of admiring friendship;

4. Cause our officials abroad to cultivate the people and not merely foreign officials;

5. Influence Americans traveling abroad, as much as possible, to conduct themselves in such manner as to arouse admiration and respect, rather than envy and dislike.

If this seems to be rather a large undertaking, let it be remembered that billions of dollars per year in giveaways are a large undertaking, too. And that the results of such giveaways are dependent, primarily, not on the giveaways themselves but in the manner of their giving. The meager results of the past (and they are meager indeed, if we'll face the true facts) have been due mostly, in my opinion, to disregard of the principles herein indicated.

Respectfully,

ED WOLFF.

The first three points made by Mr. Wolff concerning the manner in which United States largess is given and received should be carefully analyzed by those administering our overseas programs. If Congress is to be expected to support these programs, top value for every taxpayer's dollar devoted to them should be obtained.

Proclamation of Governor of Michigan on 38th Anniversary of Lithuanian Independence

---

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 15, 1956

Mr. DINGELL. Mr. Speaker, I rise to insert into the RECORD today a proclamation of the Honorable G. Mennen Williams, Governor of the State of Michigan, on the 38th anniversary of Lithuanian independence. The purpose of the proclamation, and of my speech today, is to help keep alive the fire of freedom within the hearts of the Lithuanian people, and to continue to keep before the world the plight of the Lithuanian and other peoples behind the Iron Curtain, including the people of Poland, the country from which my own forebears spring.

The proclamation follows:

PROCLAMATION—REPUBLIC OF LITHUANIA DAY

Americans of Lithuanian descent, and indeed all liberty-loving Americans, will celebrate February 16, 1956, as the 38th anniversary of Lithuanian independence. Even though the great nation of Lithuania has been engulfed with the forces of Russian imperialistic communism, Americans still remember it as a brave and freedom-loving nation. Certainly Lithuanian Independence Day will be an inspiration to all Americans of Lithuanian descent. They will remember what occurred on this day and what can occur again in the future.

Therefore, I, G. Mennen Williams, Governor of the State of Michigan, do hereby proclaim February 16, 1956, as Republic of Lithuania Day in Michigan, and urge all our people, regardless of their lineage, to pay tribute to the citizens of Lithuania and to offer a solemn prayer that their day of liberation will soon take place.

Given under my hand and the great seal of the State of Michigan, this 26th day of January, in the year of our Lord 1956 and of the Commonwealth, the 120th.

G. MENNEN WILLIAMS.

I join in the sentiments of the people of the State of Michigan as expressed by the great Governor of our State, the Honorable G. Mennen Williams, and pray that in this holy week, during which we celebrate the sufferings of our Lord and Savior, it will be a symbol to enslaved peoples everywhere and that their trials will end with the triumph of freedom and religion everywhere over the forces of godless communism in the same manner that our dear Lord emerged victorious over sin, suffering, and weakness of the flesh on that joyous first Easter Sunday almost 2,000 years ago.

Resolution Adopted by Kings Highway Democratic Club

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 21, 1956

Mr. MULTER. Mr. Speaker, I have previously directed to the attention of our colleagues the action taken by the Flatbush Democratic Club of the 21st assembly district and the United Regular Democratic Organization of the 16th assembly district, Kings County, in petitioning our Government to make available to Israel arms necessary for its security and very existence.

In this same connection I am pleased to commend to the attention of our colleagues the following resolution adopted by the Kings Highway Democratic Club. The resolution was offered by Hon. Joseph B. Whitty, its executive member, and was adopted on March 8, 1956:

Whereas we, the members of the Kings Highway Democratic Club of the Second Assembly District, 1634 East 15th Street, Brooklyn (Kings County), N. Y., knowing of the deliberate actions by which the Arab States are endangering the peace and security of the Middle East and threatening the peace and tranquillity of the entire world; and

Whereas we are cognizant that behind the Arab maneuver lies the treacherous scheme of communism which is using the Arabs as a means to destroy in Israel the brightest symbol of a true democracy in the Middle East and aware that such action will weaken the position, the prestige, and the strength of the United States through whose generous efforts and support the state of Israel was reborn and security established in that part of the world; and

Whereas we believe that it is the duty of the United States to maintain its position of readiness to preserve peace in the world and to defend other free countries from aggression: Now, therefore, be it

Resolved, That we call upon President Dwight D. Eisenhower and Secretary of State John Foster Dulles and earnestly urge them and our Government to approve the request of the state of Israel for the privilege to purchase the arms which are necessary for her defense against Arab and Communist aggression; and be it further

Resolved, That our Government immediately negotiate a security treaty with each of the countries in the Middle East which is willing to join in the promotion and preservation of peace.

The Facilities of the United Nations Should Be Used in Program of Economic Aid for Underdeveloped Countries

EXTENSION OF REMARKS
OF
HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 28, 1956

Mr. HAYS of Arkansas. Mr. Speaker, some time ago I wrote to the Secretary of State suggesting that he give earnest consideration to channeling an increased percentage of funds for economic aid to other countries through the United Nations and its specialized agencies. Under leave to extend my remarks in the Appendix of the RECORD, I include my letter to Mr. Dulles:

FEBRUARY 21, 1956.

The Honorable JOHN FOSTER DULLES,
The Secretary of State,
Department of State,
Washington, D. C.

MY DEAR MR. SECRETARY: I am writing you today on a matter to which I have given much thought during the past weeks. As a member of the United States delegation to the Tenth General Assembly, concerned particularly with the work of Committee II, I become convinced that the United States must soon find an effective way to help meet the aspirations of the less developed countries with respect to economic development. In meeting after meeting it was impressed upon me, and I am sure, upon the other members of the delegation, that to most of the nations in the United Nations an increase in the standard of living of their people and an improvement in their economic prospects are matters of importance far transcending most of the political issues with which their representatives deal in the United Nations.

I heartily subscribe to the declaration of the United States delegation which was forwarded to you, and I was gratified and proud that you saw fit to bring it to the attention of the President and to read it, with his permission, in a recent press conference. I believe in that declaration. I believe that we are engaged in a profound and far-reaching struggle with the Soviet Union for the loyalty and confidence of the less developed countries of the world, and I am convinced that our response to the appeal of these countries for economic aid will be a paramount factor in determining some vital decisions which they must make.

The Soviet Union, on its side, has put on a smiling mask of assumed generosity. I believe that many of the countries to which the Soviet blandishments are directed are aware of the evil designs back of these actions. But I am afraid that, in the absence of some effective measures on our part to give them the kind of help they desire, some may turn to the Soviets, either in desperation, or because they delude themselves into thinking they can accept Soviet aid while resisting Soviet penetration.

We are all fully aware of the generosity and magnitude of our aid activities in past years. As a Member of Congress, I have participated in the framing and passage of many such measures. But in my work in the General Assembly I was struck by the extent to which many of the underdeveloped countries about which we are most concerned would prefer to be helped through the United Nations rather than to receive bilateral assistance which they may view as having "strings attached." This feelting is so strong in many cases as to amount almost to an obsession. Whether we agree with it or not, we must recognize that it exists.

I have no particular brief for the SUNFED proposal as it now exists. I recognize the disadvantages and the dangers of placing substantial sums of our tax money into a fund which might be administered irresponsibly by numerical majorities without due regard to sound economic plans. But, Mr. Secretary, I greatly fear that unless we in the United States can produce a better plan which we are willing to support and which will have enough of a United Nations impress to satisfy the underdeveloped countries, we may find ourselves in the highly uncomfortable position of standing before an accomplished fact and being forced to join an organization which we dislike or else allow it to crash down in failure, shattering with it the hopes of millions of poor people in the world.

The United States now proposes to devote $1.9 billion to economic assistance in the coming fiscal year. Would it not be worthwhile to consider whether we should seek some means of using a relatively small percentage of that amount through the United Nations? I have no doubt that the financial experts in the Department of State and in the other agencies of the United States Government could, if so directed, draw up a sound and workable plan for an international aid fund to be related to the United Nations and to which the United States could contribute. If this can be done, I am sure that our sponsorship of such an idea in the United Nations would meet an immediately favorable reaction in the United Nations and would win for us a spontaneous expression of appreciation comparable, perhaps, to that which greeted the atoms for peace proposal in 1953. Moreover, I believe that this would bring us far greater returns proportionately in good will and cooperation than the dollars we put into bilateral assistance.

Mr. Secretary, I hope that you will give this matter your urgent consideration. I fear that time may be running short for us in this connection. With high personal regards,

Sincerely,

BROOKS HAYS.

An Analysis of the So-Called School Segregation Case by the Supreme Court of the United States

EXTENSION OF REMARKS
OF
HON. JOHN W. HESELTON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 28, 1956

Mr. HESELTON. Mr. Speaker, much has been said and written about the

unanimous decision of the Supreme Court of the United States in the Brown case on May 17, 1954.

Unfortunately all too much of what has been said or written has been of no value to those who are sincerely and deeply interested in the problems with which the Court was confronted.

One of the very few valuable contributions here on this floor and elsewhere in Congress was a special order of the gentleman from New York [Mr. KEATING], the ranking minority member of the Committee on the Judiciary. That was on March 15, beginning at page 4223. It merits the widest possible distribution and serious study. I believe that each of us, having any real concern as to the solution of the problems involved in the field of civil rights, would benefit from a careful reading of that special order.

This week two articles have been published in the Christian Science Monitor which made a further valuable contribution in this field.

They are entitled "Understanding the School Decision."

The author is Paul A. Freund, Charles Stebbins Fairchild professor of law of the Harvard Law School.

In an explanatory note the Monitor states:

Because of the legal and constitutional questions lately raised over the school desegregation decision, particularly the Southern manifesto, this newspaper asked a distinguished authority on constitutional law to explain the background of the Supreme Court's action.

The first of the articles, published on March 26, follows:

Unanimous decisions of the Supreme Court are uncommon enough in ordinary cases, and especially rare in extraordinary ones. When, therefore, the unanimous decision in the school segregation cases provokes attacks on the Court for "judicial usurpation" and "naked judicial power," the lines of communication between the Court and the people have been badly tangled. The phrases just quoted are taken from the Declaration of Constitutional Principles issued by 19 Senators and 81 Representatives in the United States Congress.

This declaration (popularly known as the Southern manifesto) is only the latest and most dramatic item of evidence that we may be facing not only a crisis in race relations but—what could in the long run be even more shattering—a crisis in the role of the Supreme Court as the authoritative voice of our highest law. The latter threat, no less than the former, calls for the fullest possible measure of understanding.

One thing can surely be said of the segregation cases: They were not hastily or thoughtlessly decided. Every contention now advanced against the decision was presented to the Court in briefs, running to hundreds of pages, and in oral argument. The Court was exceptionally deliberate in its treatment of this litigation. The cases were originally set for argument in October 1952. Argument was postponed by the Court until December. In June 1953, the Court ordered the cases reargued at the following term, specifying certain questions, including historical inquiries, to be canvassed by counsel.

In December 1953 the reargument took place. The Court was assisted not only by the unusually thorough briefs of the complainants and the defendant States but by a full-scale brief submitted by Attorney General Brownell, in support of the complainants' position. On May 17, 1954, the decision was finally handed down; but even then the Court avoided precipitate action. Still another argument was ordered on the question of the form of relief.

The attorneys general of all States requiring or permitting racial discrimination in public education were invited to present their views, and the representatives of six States—Florida, North Carolina, Arkansas, Oklahoma, Maryland, and Texas—were in fact heard, in addition to the States directly involved in the cases—Kansas, South Caroling, Virginia, Delaware, and the District of Columbia.

The judgment of the Court was announced on May 31, 1955, more than 3 years after the cases had been docketed there, and after every forewarning that a momentous decision might be forthcoming, but still with forbearance in the order for enforcement. The NAACP had asked for decrees effective not later than the opening of the next school year. The Attorney General's brief had suggested decrees requiring plans to be submitted by the States within 90 days, "for ending, as soon as possible, racial segregation of pupils in public schools."

The Court took the more moderate course of directing the lower courts to enter "such orders and decrees consistent with this opinion as are necessary and proper to admit to public schools on a racially nondiscriminatory basis with all deliberate speed the parties to these cases." The phrase "deliberate speed" is a term of legal art deriving from 18th century chancery practice, and not, as certain litterateurs surmised, from the haunting refrain in Francis Thompson's religious poem The Hound of Heaven: "Deliberate speed, majestic instancy."

The literary reference does, however, serve by contrast to underscore the judicious restraint shown by the Court. Majestic instancy would have been too heroic a demand for mortal men faced with genuine problems of school districting, allotment of facilities, transfer of teachers, grading of pupils, and similar administrative burdens. Nevertheless the opinion made it plain that delay for reasons of community nonacceptance would not be legitimate. "But it should go without saying," the opinion of Chief Justice Warren declared, "that the vitality of these constitutional principles cannot be allowed to yield simply because of disagreement with them."

Those who disagree with the decision on constitutional grounds argue that it is not justified by either the language or the history of the 14th amendment. The Congressmen's declaration, for example, states: "The original Constitution does not mention education. Neither does the 14th amendment nor any other amendment."

This, of course, is true. The 14th amendment provides that "No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property, without due process of law; nor deny to any person the equal protection of the laws."

But the argument from the silence of the Constitution about education proves much too much. It is the very essence of the Constitution that it speaks in generalities like "equal protection of the laws," and it is the very essence of the judicial process that it must apply the generalities to the concrete facts of experience. Nowhere does the Constitution mention agriculture; are there then literalists who would conclude that Congress is out of bounds in debating Federal price supports for agricultural commodities?

Note, too, that the argument from the silence of the Constitution would rule out any Federal standard whatever for public education, the separate-but-equal standard no less than desegregation. In this respect the declaration is not free from ambiguity, for it quotes with apparent approval the separate-but-equal doctrine as an "established legal principle almost a century old." It is not clear, that is, whether the usurpation by the court is thought to begin when any facilities at all are required for the public education of Negroes, or equal facilities in separate schools, or admission without regard to race.

The argument from the historical background, rather than the text, of the 14th amendment, is subtler, and it leads to some basic questions about the nature of constitutional interpretation. To quote once more the declaration of the Members of Congress: "The debates preceding the submission of the 14th amendment clearly show that there was no intent that it should affect the systems of education maintained by the States."

Here there is a further ambiguity. If the meaning is that there was no specific, calculated purpose to deal with education, the statement is undoubtedly true. If the meaning is that there was a specific, calculated purpose to exclude education, the debates are plainer to the signers of the Declaration than they were to the Court or to the Attorney General. The word used by Chief Justice Warren to describe the debates is inconclusive. This is hardly surprising, in view of the relatively minor role of public education at the time, and the correspondingly fragmentary attention it received in the spacious discussions in Congress over privileges and immunities of citizens and equal protection of the laws.

Most schooling in the South was private in 1868; for Negroes it was virtually nonexistent there; and throughout the country the public-school system and compulsory education as we know it were in a rudimentary stage. The Congress which approved the 14th amendment did not foresee the development in education which has taken place and did not foreclose the participation by Negroes in that development on a plane of equality, for equal protection of the laws was adopted as a standard without exceptions or exemptions.

Even if the legislative history had shown more evidence than it did of an intention not to cover public education, the interpretation of the 14th amendment would not necessarily be circumscribed by that sentiment. The Founding Fathers in the convention of 1787 voted down a proposal to authorize Congress to grant charters of incorporation. This negative vote did not later prevent such charters from being granted and upheld, under general language which the framers approved.

Very often, and very properly, the real intention of constitutional assemblies is to establish principles and to leave the hard questions of their application to be worked out in the unknown future. Thereby trouble is not borrowed for the present, and the unfolding life of the future is not straitjacketed.

The process is misunderstood if it is thought to be peculiar to the 14th amendment. The sixth amendment, for example, provides that "the accused shall enjoy the right * * * to have the assistance of counsel for his defense." When this was formulated in 1789, the right of an accused person even to employ counsel to assist at his trial was denied in England for many types of crimes; not until 1836 was that right fully granted in England.

With us, however, the guarantee has come to mean more than the right to have the assistance of counsel who is employed. It has come to mean, as interpreted by the Supreme Court, the right of an indigent defendant to have counsel appointed for him by the trial court. This is simply an illustration of Chief

Justice Hughes' pronouncement in the famous mortgage moratorium case in 1934:

It is no answer to say that this public need was not apprehended a century ago, or to insist that what the provision of the Constitution meant to the vision of that day it must mean to the vision of our time. If by the statement that what the Constitution ment at the time of its adoption it means today, it is intended to say that the great clauses of the Constitution must be confined to the interpretation which the framers, with the conditions and outlook of their time, would have placed upon them, the statement carries its own refutation.

An Analysis of the So-Called School Segregation Case by the Supreme Court of the United States

EXTENSION OF REMARKS
OF
HON. JOHN W. HESELTON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 28, 1956

Mr. HESELTON. Mr. Speaker, I have referred previously today, in an extension, to the first of two articles published by the Christian Science Monitor entitled "Understanding the School Decision," by Prof. Charles Stebbins Fairchild, of the Harvard Law School.

It is a privilege to include in this extension the second of these articles which was published in the March 27 edition of the Monitor, as follows:

Is there, then, no criterion of meaning for the general guaranties of the Constitution? Must the Justices do what they are accused of doing in the Congressmen's declaration, substituting personal, political, and social ideas for the established law of the land?

The answer is that as the function of a Justice is necessarily something more than to be a grammarian, it is decidedly less than to be a zealot. The Court interprets to us our own ideals implanted in the constitutional document, as they have flowered in our national life. Justice Holmes put a complex idea concisely, in speaking of the provisions of the Constitution: "Their significance is not formal; it is to be gathered not simply by taking the words and a dictionary, but by considering their origin and the line of their growth."

"The line of their growth" is a key to the understanding of the segregation cases. Whatever the purposes the 14th amendment may serve—and it has come to serve a good many collateral ones, such as the rule of "1 thing, 1 tax" in State taxation—its basic aim concerned equality of rights for Negroes. The development of that concept is a story of successive applications of the principle to a widening variety of practices.

In 1880 the right to be included on juries was established. In 1917 racial restrictions in zoning laws were held invalid, despite the argument of the municipality that property values and public order required the discrimination.

In 1927 the all-white primary election was ruled invalid, despite the argument of the State that primaries are a private political affair. In a passage resembling some current protests, the brief of the State of Texas declared, "It must be remembered that nominating primaries were unknown at the time of the adoption of the Constitution of the United States and of the constitution of Texas in 1876. The question of parties and their regulation is a political one rather than legal."

Although the 15th amendment deals with the right of suffrage, Justice Holmes said, for the Court, "We find it unnecessary to consider the 15th amendment, because it seems to us hard to imagine a more direct and obvious infringement on the 14th."

Then in 1938 a Negro applicant was ordered admitted to the law school of the University of Missouri, despite the State's offer to pay his tuition at a nondiscriminating law school in a neighboring State. Since Missouri had no separate (and equal) law school for Negroes, the color line had to be broken in the State university. Mr. Justice McReynolds, who dissented from the opinion delivered by Chief Justice Hughes, saw clearly enough the line of growth in education, and he did not like it. He said:

"For a long time Missouri has acted upon the view that the best interest of her people demands separation of whites and Negroes in schools. Under the opinion just announced, I presume she may abandon her law school and thereby disadvantage her white citizens without impairing petitioner's opportunities for legal instruction; or she may break down the settled practice concerning separate schools and thereby, as indicated by experience, damnify both races."

All of these cases had their sequels, in which the Court turned back attempts to circumvent the decisions or to blunt their effect by differentiating them from cases coming before the courts. Much of the progress was made before World War II. Since then, in Korea and in military posts around the globe, as well as at home, we have extended the principle of desegregation. The question before the Court in the school cases was whether the vital growth had come to an end in the educational sphere with the separate-but-equal doctrine or whether it carried through to desegregation.

The Court could have answered in any of three ways. It could have answered as it did, finding that the principle of equality was not exhausted by separate but equal facilities; that as a Nation we had moved beyond that stage in profession and to a substantial degree in practice; and that the real and painful difficulties of adjustment in certain areas would be given proper respect by allowing time for administrative change-overs.

The second possible choice for the Court would have been to leave the matter to Congress under the power to enforce the provisions of the 14th amendment. That course would have been the easiest for the Court to take, but it would not have been the most straightforward.

The advances already made in applying the principle of equality had been achieved through resort to the Court, not to Congress: zoning, primaries, university education. Congress was not in the habit of taking responsibility in this field, or indeed in any of the other ramifications of the 14th amendment as limits on the powers of the States. To have dropped the issue in the lap of Congress would have been extraordinary. Congress, on its part, could have been expected to regard the issue as a judicial one and to play an Alphonse-Gaston game.

The third possibility was to decide that education is not included in the guarantee of equal protection of the laws, or that the guarantee is satisfied by separate public schooling. This would have been a pronouncement that as a people we do not recognize fellowship in the educational process to be a minimum standard for governments to observe in our common life, that the vital growth of the principle of equality has not carried to this point.

Would we have been satisfied with this reflection of our own better nature as a people? For it is just that better nature which we mean the Court to hold up to us in interpreting the Bill of Rights. A philosopher, Alexander Meiklejohn, once described the Court's function in this way:

"That Court is commisisoned to interpret to us our own purposes, our own meanings. * * * And its teaching has preculiar importance because it interprets principles of fact and of value, not merely in the abstract, but also in their bearing upon the concrete, immediate problems which are, at any given moment, puzzling and dividing us."

If the Court was wrong in the school cases it is because the Court misjudged our present-day ideal of equality in law. To judge the decision, therefore, is to judge ourselves, all of us, for the Constitution sets a common, not a sectional, standard for the country. That is why it is supremely important that we understand the meaning of the decision and the role of the Court in reaching it. That is why it is important, too, that those who believe the Court judged rightly, as well as the critics, should let their voices be heard.

An Opportunity Now for the House To Act on Civil Rights Legislation

EXTENSION OF REMARKS
OF
HON. JOHN W. HESELTON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 28, 1956

Mr. HESELTON. Mr. Speaker, I have been asked frequently why it is that Congress apparently does nothing in meeting and discharging its responsibilities in the field of civil-rights legislation. I assume many of my colleagues have been asked the same question.

It must be admitted that the record of Congress over the years in this field has been anything but a distinguished one.

No one, except an extreme partisan, would question the proven fact that the executive departments have made substantial and significant contributions in implementing an excellent civil rights program.

Few, whose opinions are respected, would challenge the progress made in the judicial department and particularly by the Supreme Court of the United States and of the other Federal courts in defining and upholding the civil rights of American citizens.

But Congress, which has now and has had many vital phases of legislation in this field confronting it, seems to all too many of those to whom it is responsible to have been indifferent, inept, or lacking in courage.

It is of little use to point out that congressional procedures are usually, and in many cases wisely, slow.

It is of as little use to call attention to the number of bills which have been filed in this field over the years by Members of Congress of to the number of hearings and even reports by congressional committees.

It is of no value at all to try to explain why it is that any real results have been delayed, obstructed, and even prevented by a very few having the power to do that or by such parliamentary devices as filibusters.

But now, next month, the House will have the opportunity of direct action in this field if a bare majority of the Members wish to exercise their undoubted right to demand it.

H. R. 440 and 441 were filed respectively by the gentleman from California [Mr. ROOSEVELT] and the gentleman from Indiana [Mr. BROWNSON] on March 21.

These are identical resolutions providing for the consideration of H. R. 627.

Each provides for recognition for the consideration of H. R. 627, a bill described as follows:

To enact national policy to protect the right of the individual to be free from discrimination on account of race, color, religion, or national origin. Establishes a five-man Commission on Civil Rights, appointed by the President with the consent of the Senate, to gather information and report to the President on what activities affect civil rights. Authorizes a full-time staff director. Creates a Civil Rights Division in the Department of Justice under an Assistant Attorney General. Creates a 14-man Joint Congressional Committee on Civil Rights. Amends and supplements existing civil-rights statutes; provides additional criminal penalties and gives the United States district courts concurrent jurisdiction with State courts to enforce civil actions against offenders (amending U. S. C. 18, sec. 13).

These resolutions were referred to the Rules Committee and, of course, can be reported by that committee.

However, if there is no action by that committee by the time this House reconvenes on April 9, it will be in order, under the rules, to file a discharge petition and this will be done. This petition will become effective once it is signed by a majority of the Members of the House. Therefore, whatever actions may be taken by others and irrespective of the reasons assigned for such actions, each individual Member of the House will have his clear opportunity early next month of becoming a part of the majority of the House demanding that it be given an opportunity to express its own judgment and convictions in this field of civil-rights legislation.

It is important to note that 218 signatures are construed to be a majority within the purview of the rule, that additional signatures are not admitted after the requisite number have been affixed, and that when a majority of the membership has signed the discharge petition, the motion, generally known as the petition, is printed in the RECORD, entered in the Journal and referred to the Calendar of Motions to discharge committees.

It may be suggested that this discharge petition procedure is usually futile. It must be conceded that this is a fact.

But the exceptions are notable.

Many Members feel quite reasonably that the procedure should not be utilized unless there have been full hearings on the proposed legislation and a clear situation existing making it practically certain that this House as a whole will be deprived of its opportunity to pass upon that proposal unless that procedure is invoked. If the Rules Committee decides not to take affirmative action upon either of these discharge rules by the time Congress returns from the recess, both conditions will be satisfied beyond any possibility of question.

It may also be suggested that consideration of H. R. 627 and action by this House on it may be frustrating because no one can guarantee the necessary further action. That, too, may become a fact; but if so, it will be one over which no Member of the House has any control. And the responsibility for it becoming a fact will be understood by everyone concerned as to the imperative need of congressional action at this time in the field of civil rights.

These are the facts which confront this House now.

I want to conclude with a reference to the brief remarks in the RECORD of March 21, at pages 4710 and 4711, which accompanied the introduction of House Resolution 440 and House Resolution 441.

I know that there has been some evidence of an inclination toward partisanship with reference to the consideration of H. R. 627 by this House. Any examination of the remarks in the RECORD which I have cited will contradict any such resort to partisanship and should prevent its recurrence while the matter is before this House.

That any such reference is not only unjustified but also completely inaccurate is proven beyond any possible doubt by the statements that these resolutions were filed, as the gentleman from California [Mr. ROOSEVELT] said, as "representing a very large group," and, as the gentleman from Indiana [Mr. BROWNSON], said, "in behalf of Members of the House on both sides of the aisle who have been meeting sincerely and earnestly in an attempt to work out with the Attorney General a thoughtful legislative solution to some of the civil-rights problems which face us" and "as a constructive step in the direction of making sure that the membership of this House will have a full opportunity to express themselves in connection with this problem of curtailment of civil rights." The gentleman from New York [Mr. POWELL] stated the undeniable fact when he said that "Mr. ROOSEVELT and Mr. BROWNSON have by their remarks indicated that this is an issue stripped of partisan politics." The good reputation of this House, in the judgment of an overwhelming majority of the American people, will be enhanced if the issue remains divorced from partisan politics and if a strong majority of the Members insist upon the right of individual Members to express themselves in this field of legislation as to which it has an absolute and unqualified responsibility.

Meeting the Soviet Moves To Control This Nation's Activities

EXTENSION OF REMARKS

OF

HON. JOHN W. HESELTON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 28, 1956

Mr. HESELTON. Mr. Speaker, widespread concern has been expressed as to this Nation's ability to act effectively in the face of Communist Russia's new program to conquer the world.

Articles have been published, columns have been written, speeches have been made, and in scores of other ways fear has been spread that Russia has outmaneuvered the free world, that it has outstripped us in the weapons necessary to defend ourselves against aggression, and, in general, that the initiative has been taken by communism.

All too many of these prophets of gloom and doom are demanding that the President's recommendations as to foreign aid must be rejected. Where this opposition to the President's request stems from election jitters, it may be understandable but it hardly reflects any particular credit upon the opponents. More often it seems to arise among those who fear that the people of this country do not appreciate the risks so clearly pointed out to them by the President. And perhaps some of it comes from an uneasy feeling that the people of this country are not willing to make the sacrifices the President requests to prevent a devastating war and their annihilation.

In any event, the critics and opponents would be wise indeed if they would expose themselves to the opinions of the American people rather than relying too much upon the caterwauling of some few partisan opportunists, aided and abetted by a handful of righteous pundits in a position to publish their carping criticisms incessantly in some of the press and over some of the radio and television.

While it is certain that some of these opportunists will be desperately trying to convince the voters this fall of their strong and constant support of the President in his efforts to serve the American people and the cause of peace in the world, they may be in for a rude awakening to the fact that the voters are intelligent, do remember the facts and are determined to help the President, in whom the great majority have great confidence.

An excellent and timely illustration of independent and sound thinking was published in the North Adams (Mass.) Transcript on March 25. Those who would like to tie the hands of the President by rejecting his recommendation would benefit by reading and considering it carefully. It is:

The day will sometime come, we all hope, when the need for substantial foreign aid will have vanished—when the free nations of the world are strong enough militarily to discourage any attempts to interfere with their individual or collective freedom, and strong enough economically to support their own individual military efforts.

But no one can honestly hold out much prospect for such a development in the foreseeable future. That means that if the foreign-aid program is worthwhile for the defense of the United States, we must expect it to continue for as long as the cold war continues.

In spite of this, Congress has up to now handled the foreign-aid program on an annual basis, much as though it really expected that maybe next year this thing will end, so we will just lay out a program and provide funds for the coming year.

The Eisenhower administration has this year finally taken the bull by the horns, and in his special foreign-aid message President Eisenhower requested authority to make commitments ahead for 10 years. Judging from early comments, this will be the most controversial part of the President's re-

quested program this year. Even if most Congresmen favored such a project—and many don't—they would shy away from anything that might appear to place foreign aid on anything like a permanent basis.

But logic in this case is certainly on the President's side. Experience has more than once shown that the year-by-year approach is painfully inflexible, and as Mr. Eisenhower pointed out, flexibility is a must in a world where "events move with great rapidity." An example was the awkward position the United States found itself in in regard to Egypt's proposed Aswan Dam. Here was a project of the type that would raise the economic level of an underdeveloped country and thus permit it to help itself. But it is also a project that requires continuing and consistent financial backing not for just a year but over a period of years.

Russian leaders can be as flexible as they wish in responding to such situations—and have demonstrated recently that they not only can be but will be flexible as witness their sudden change from a policy of military threat to one of economic penetration. With its hands tied by Congress to a set program drawn up each year for the coming 12 months, the United States is certain to be severely handicapped if it cannot originate new commitments when it becomes desirable. As things are now, the administration cannot plan very far ahead, which means that we can look forward to a long string of defensive countermoves to Soviet initiative. President Eisenhower said that "we do not intend to permit specific Soviet moves to control our activities" but must go ahead affirmatively." But unless Congress permits long-range commitments and planning, and gives the President flexibility in handling matters as they arise, we could well find ourselves doing just what Mr. Eisenhower does not intend.

One of the principal arguments against foreign aid itself—and it will certainly be used by those opposing the long-range authority the President wants—is that American taxpayers just can't afford to continue it. Aside from the fact that we very obviously can't afford not to continue it, it just is not so that our economy can't stand it. At the present level of spending, foreign aid costs each United States citizen $26 a year—about the price of a kitchen radio. Moreover, since 1952 expenditures for foreign aid have dropped from $5.7 billion to $4.2 billion a year. This drop, together with increases in the United States population and gross national product, means that foreign aid is costing each American less of what he has to spend than formerly.—and this trend seems certain to continue.

Even if, as now seems likely, Congress may not be willing to appropriate the full amount the administration is asking for foreign aid, it should try to give the President the flexibility he wants in using these funds and in planning ahead and meeting new contingencies.

Flatbush Democratic Club Joins With Citizens' Committee for the Security of Israel

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 7, 1956

Mr. MULTER. Mr. Speaker, in November 1955, the Citizens Committee for the Security of Israel was formed in Brooklyn with headquarters at 2267 Church Avenue, for the purpose of bringing to the attention of the Secretary of State for the United States the thoughts and desires of many of our citizens concerning the sale of Communist arms to the Arab countries. Hon. Alexander G. Hesterberg, Democratic State committeeman of the 21st assembly district, was named as chairman, and Mr. Edward S. Silver, the district attorney of Kings County, was named as secretary.

On February 15, 1956, representatives of the committee called upon Assistant Secretary of State George V. Allen and presented to him some 10,000 signed petitions urging the Secretary of State—to take action to settle the present controversy existing between Israel and the Arab States either by supplying arms to Israel or a mutual security pact or such other means as may be circumspect and necessary.

On February 23, 1956, the Flatbush Democratic Club unanimously adopted the resolution offered by its executive member, Alexander G. Hesterberg, urging President Eisenhower and Secretary Dulles to prevent the spread of communism and Arab aggression by supplying arms to Israel for her defense, and to enter into mutual security pacts with each of the countries in the Middle East willing to do so.

Present Administration Policies Swiftly Forcing Ruination of Small Independent Farmers, the Backbone of Our Nation

EXTENSION OF REMARKS
OF
HON. VICTOR WICKERSHAM
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 28, 1956

Mr. WICKERSHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to call to the attention of my colleagues the following statistics which indicate the facts that the farm population is decreasing and that the size of the farm is greatly increasing in the State of Oklahoma. These authentic statistics which I have secured indicate that not only one county but every county in the State of Oklahoma has suffered.

The present administration or any administration owes it to the present populace of our Nation and to posterity to protect the tiller of the soil, the backbone of our national economic life:

Change in size and number of farms, 1950–54

County	Change in number of farms (percent)	Change in average size (percent)
1. Adair	−17.1	+20.3
2. Alfalfa	−14.6	+13.0
3. Atoke	−20.4	+18.0
4. Beaver	−6.9	+12.4
5. Beckham	−16.5	+11.4
6. Blaine	−12.7	+17.7
7. Bryan	−18.1	+25.0
8. Caddo	−20.4	+27.7
9. Canadian	−11.5	+12.4
10. Carter	−19.5	+22.2

Change in size and number of farms, 1950–54—Continued

County	Change in number of farms (percent)	Change in average size (percent)
11. Cherokee	−22.6	+3.9
12. Choctaw	−24.2	+37.9
13. Cimarron	−9.3	+9.8
14. Cleveland	−21.9	+13.6
15. Coal	−25.8	+35.4
16. Comanche	−12.9	+5.0
17. Cotton	−11.8	+13.7
18. Craig	−15.2	+14.2
19. Creek	−28.5	+35.3
20. Custer	−13.9	+18.0
21. Delaware	−18.1	+14.8
22. Dewey	−15.3	+15.2
23. Ellis	−13.6	+11.3
24. Garfield	−11.3	+14.6
25. Garvin	−16.7	+8.7
26. Grady	−19.9	+24.9
27. Grant	−6.8	+10.2
28. Greer	−20.8	+18.0
29. Harmon	−15.6	+11.7
30. Harper	−14.7	+18.5
31. Haskell	−25.2	+32.6
32. Hughes	−19.4	+21.6
33. Jackson	−3.6	+14.5
34. Jefferson	−23.3	+28.4
35. Johnston	−23.6	+26.9
36. Kay	−12.8	+12.3
37. Kingfisher	−16.2	+16.9
38. Kiowa	−12.2	+16.3
39. Latimer	−7.7	+19.7
40. LeFlore	−17.6	+23.6
41. Lincoln	−16.2	+15.1
42. Logan	−4.3	+8.4
43. Love	−18.9	+18.5
44. McClain	−11.0	+20.2
45. McCurtain	−22.1	+27.0
46. McIntosh	−26.3	+39.2
47. Major	−4.1	+6.6
48. Marshall	−18.3	0.
49. Mayes	−15.1	+10.2
50. Murray	−15.5	+10.9
51. Muskogee	−17.1	+15.9
52. Noble	−8.5	+12.3
53. Nowata	−17.3	+16.2
54. Okfuskee	−22.3	+25.3
55. Oklahoma	−14.2	+14.7
56. Okmulgee	−18.7	+31.8
57. Osage	−11.2	+3.8
58. Ottawa	−22.0	+23.2
59. Pawnee	−9.1	+14.4
60. Payne	−10.3	+12.8
61. Pittsburg	−16.5	+18.0
62. Pontotoc	−13.7	+31.0
63. Pottawatomie	−19.1	+20.3
64. Pushmataha	−21.8	+22.4
65. Roger Mills	−9.2	+4.9
66. Rogers	−4.9	−5.0
67. Seminole	−26.6	+33.7
68. Sequoyah	−15.2	+13.2
69. Stephens	−8.2	+7.2
70. Texas	−8.3	+6.7
71. Tillman	−17.9	+20.9
72. Tulsa	−30.6	+62.1
73. Wagoner	−15.8	+25.9
74. Washington	−27.4	+26.2
75. Washita	−13.4	+14.4
76. Woods	−9.9	+13.8
77. Woodward	−8.8	+17.0
State	−16.4	+20.3

NOTE.—Acres of land in farms in the State decreased 1.05 percent between 1950 and 1954.

Lines Drawn in Oregon

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1956

Mr. METCALF. Mr. Speaker, as the St. Louis Post-Dispatch says in an editorial in the March 11 issue, this administration has paid the senior Senator from Oregon [Mr. MORSE] a high compliment in dispatching a Cabinet mem-

ber to run against him. The editorial follows:

LINES DRAWN IN OREGON

The Eisenhower administration has paid Senator WAYNE MORSE a high compliment in dispatching Secretary of the Interior McKay to run against him in Oregon.

Some who regard Douglas McKay as something less than a gold-plated asset of the administration may suggest that the Oregon Democrat has really been done a favor. But it would be premature to regard Senator MORSE as a shoo-in. Clearly the administration has given the very highest political priority to the task of retiring this former Republican who committed the unforgivable sin of opposing Dwight D. Eisenhower in 1952, and then turning Democrat.

Secretary McKay is quite right in saying that the contest will amount to a showdown on the Eisenhower policies—and particularly, the Eisenhower policies on public power, conservation, and resource development which have been Mr. McKay's special province.

The people of Oregon heard those policies devastatingly criticized in 1954, and they sent the critic to the Senate in the person of RICHARD L. NEUBERGER, the first Democratic Senator from the State in 40 years. Now they will get a chance to register their sentiments on these issues, as well as many others, again.

The campaign will be watched with interest by the rest of the country because Senator MORSE has distinguished himself as one of those rare Senators who does not conform to a pattern of political orthodoxy. Like the late Senator George W. Norris, of Nebraska, he values his independence more than his party standing, and he therefore performs many a useful service which others neglect.

Mr. Speaker, the voters of Oregon will be called upon to evaluate Mr. McKay's record, including that in the field of conservation.

In this connection, I call your attention to the report on Preservation of National Wildlife Refuges, issued March 22 by the Committee on Merchant Marine and Fisheries. That report, adopted unanimously, was critical of the administration of wildlife refuge lands by Secretary of Interior McKay.

The committee's report said that hearings held early this year revealed "a picture of extreme administrative confusion" in the Department of Interior. It declares that new oil leasing regulations for refuges, issued last December 2 by Secretary McKay, "fall far short of providing the degree of protection to the refuges which the activities of recent years prove to be necessary."

The committee report, referring to oil leases on wildlife refuge lands, declared:

Such increased activity in the issuance of leases by the Secretary of the Interior, or by those under his immediate supervision, can only result in serious damage to the wildlife refuge system in this country.

As the distinguished chairman of that committee told us Monday:

The Committee on Merchant Marine and Fisheries was most charitable to the Secretary of the Interior, the Fish and Wildlife Service, as well as to the entire Department of the Interior, because the report will absolutely show that there was chaos existing in the Fish and Wildlife Service. Administrative matters were being passed from the Secretary of the Department out into the field without the director knowing anything about it.

Air Force Submits to Saudi Arabian Anti-Christian Prejudice

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 28, 1956

Mr. CELLER. Mr. Speaker, news dispatches indicate that the United States Air Force has made concessions to Saudi Arabian prejudice against Christianity in addition to tolerating anti-Jewish discrimination by Saudi Arabia.

At the Dharan Base, according to the reports, United States chaplains do not wear the insignia crosses denoting their status as Christian chaplains. This is done to avoid fanatical Moslem wrath. Catholic officials—in the interest of their personal safety—have been obliged to defrock when on a mission to the base.

Further, according to the reports, Chrisian religious services on the base are conducted with a measure of secrecy, with precautions taken to avoid arousing Moslem ire. The base figured in the news recently when Secretary of State Dulles, in response to Senate Foreign Relations Committee questioning, said that Sauda Arabia prohibited United States forces from stationing American servicemen of Jewish faith there.

One report recently heard is that the United States flag is not flown over the base because the Saudi Arabians look upon it as an infidel symbol. A question has been raised by service personnel as to the extent of control the United States command has over the base because of the numerous reported concessions to Saudi Arabian extremism. Several weeks ago Saudi Arabia threatened to refuse revewal of the agreement under which the base is leased, thus forcing the State Department to release 18 Army tanks held up at the port of shipment because of the tense Arab-Israel situation.

This proves that prejudice cannot be confined. It becomes all pervading. First Saudi Arabia directed its prejudice against Israel merchants by boycoting them, then discrimination was extended to American citizens of Jewish persuasion, and now it embraces members of the Christian faith.

Who Is Out of Date?—Certainly Not Congressman Clare Hoffman

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including an interesting editorial from the News-Palladium, of Benton Harbor, Mich., of March 10, 1956. It refers to our beloved colleague CLARE HOFFMAN, of Michigan, and suggests that Mr. HOFFMAN is not out of date. I agree.

ON BEING OUT OF DATE

Veteran Congressman CLARE HOFFMAN has a reply—several in fact—to critics who accuse him of living in the past, while the world moves forward to bigger taxes, more controls, and Government paternalism.

Mr. HOFFMAN does not say so, but his answer to his detractors might well be "Nuts."

"Everyone knows that time marches on," Mr. HOFFMAN writes, "but sensible people learn from past experience and think of the future, not just of today.

"When Adam and Eve were banished from the Garden of Eden because they associated with a snake," Representative HOFFMAN continued, "it became evident that if they were to live, it would be necessary for them to hustle for themselves."

Others, less observant than Adam and Eve, still cling to the illusion that we can get food, clothing, homes, and most of the things we want by legislation.

Being quite a historian himself, Congressman HOFFMAN cites the failures of Government controls and price fixing over the centuries.

And as long as the earth goes around, HOFFMAN declares, no individual or group of individuals filled with theories will be able to change or overcome nature's laws.

Mr. HOFFMAN admits to being old-fashioned enough to believe in the Ten Commandments and Golden Rule. He believes that toil is a human heritage that can't be ended by passing a law. He does not believe that Government can furnish substitutes.

In Mr. HOFFMAN'S view fundamentals don't change with each generation. He doesn't believe it is possible to get something for nothing, materially or spiritually.

"Unless I am completely mistaken," Representative HOFFMAN concludes, "the people of the Fourth District are convinced that if they are to reap, they must sow; that if they are to harvest, they must plant, prune, and spray. That if they are to live in comfort, they must work, be thrifty, conserve, and wisely use their resources. That, if they are to live in peace, they must be tolerant of their neighbors' rights."

This is an old, old, and to some, antiquated philosophy, going back to the beginning of the Christian era. If it is dated, then we, too, are happy, along with Mr. HOFFMAN, to be so classified.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

Appendix

The Public Welfare Act of 1956

EXTENSION OF REMARKS
OF

HON. AIME J. FORAND

OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1956

Mr. FORAND. Mr. Speaker, I have today introduced for appropriate reference the Public Welfare Act of 1956.

This bill proposes to remedy a growing inequity and inadequacy in our total social security system by placing the public welfare program on an up-to-date basis that will make it possible for the State and local public welfare agencies to carry out, in an adequate and constructive way, their assigned task of providing ultimate protection to all people against unmet economic and social needs.

Specifically the bill provides a new title XVI in the Social Security Act, as an optional alternative to its present assistance provisions, under which the States might submit a single comprehensive public welfare plan and receive Federal aid on a more flexible, adequate, and rational basis for assistance to all needy persons and services for all those who require such welfare aid. This bill incorporates principles which have long been advocated by labor unions, public welfare officials, and other social work leaders. It brings up to date similar bills I have offered in previous Congresses.

The actions taken over the past 6 years to strengthen the contributory old-age and survivors insurance program make it especially urgent that we now move to improve the situation of those who still remain in need. Among others we find in this situation the following: First, those who retired from employment or were widowed too early to benefit from the OASI program; second, those whose needs are not adequately met by fixed insurance benefits either because they fall in the minimum benefit category or because they have special needs—as, for example, for medical or nursing care; third, those whose needs arise from situations not provided for in any existing program—as, for example, catastrophic illness or prolonged unemployment or the loss of a farm; and fourth, those whose particular needs require a helping hand to assist the individual get back on his feet, secure the specialized care he requires, or—in the case of a child or badly handicapped adult—be assured the protective care he needs. The plight of many of these groups—so inconsistent with our present unprecedented prosperity—has been sharply pointed up in the recent report of the Subcommittee on Low-Income Families of the Joint Committee on the Economic Report.

In all these situations people are dependent for help on their State and local public welfare agencies in finding an answer to their immediate needs, whatever longtime social remedies may be sought elsewhere. The public welfare agency is the place to which any American can turn when all other sources of help have proved inadequate to his need: his savings, his social insurance benefits, his family, his union, or lodge, his church, voluntary welfare agencies, and many others. We pride ourselves in this country on the fact that no one need go hungry and no one need lack for a helping hand when he needs it. The public welfare program is the instrument through which we translate this community pride into a reality. It does not compete with the means, like social insurance and a full employment economy, through which we seek to prevent need. Nor does it compete with our traditional social institutions: the family, church, private enterprise, and other forms of voluntary association. It underpins and supplements these so that they can better perform their own functions.

At the present time, however, these public-welfare aspects of our social-security program are badly handicapped by certain outdated provisions of the Social Security Act. These provisions, especially those incorporated in the assistance titles I, IV, X, and XIV, served a great pioneering purpose in the days when large categories of persons were excluded from social-insurance coverage and it was necessary clearly to establish their right to public aid. Today, however, as more adequate social-insurance provisions begin to reduce the numbers of persons requiring public assistance, it is imperative that our public-welfare machinery be modernized in order to meet more adequately the special needs of all those who are still excluded from the general national prosperity. It is not only right in principle that we should do so but it is essential to the future strength and health of our Nation that no individuals—and especially no children—should be deprived of their right to share in the American ideal and to find some answer to their most basic needs.

While some of the assistance changes proposed by the present administration move very slightly in the direction of my proposal, especially in making somewhat more adequate provision for medical care for assistance recipients and in giving official recognition to the service factor in administering assistance, they make no approach whatsoever to the basic public-welfare problems with which my bill deals; namely, (a) universal coverage, more adequate levels of aid for all States; (b) a more realistic concept of the scope and purposes of public-welfare services; (c) the simplification of administrative procedures and organization.

In at least one important respect the administration proposals move in the opposite direction by proposing to reduce the Federal aid available to assist those older persons whose OASI benefit falls below the assistance level established as minimal by their States. For all these reasons it has seemed to me of the utmost importance that the Congress should have before it a forward-looking public-welfare bill which incorporates the best thinking of those familiar with this field and reflects our earnest concern for those many Americans whose problems, needs, and hardships still lie outside the range of existing social measures. Only through a measure of scope and vision can we be sure that our general social advance leaves in its wake no forgotten Americans.

In the statement which follows a more detailed explanation of the provisions of this bill is given.

PROVISIONS OF THE PUBLIC WELFARE ACT OF 1956

General: The bill provides a new title XVI for the Social Security Act under which a State could submit a comprehensive public-welfare plan for assistance to needy persons and welfare services as defined in the bill. States that wished to do so could continue to operate programs of assistance under the existing provisions of titles I, IV, X, and XIV, but the new matching provisions described below are applicable only to title XVI and the usual provision is made to preclude assistance payments to any individual under more than one title of the act. For most States the scope, flexibility, and financial provisions of title XVI would probably prove an inducement to change, but the optional feature would ease the transitional process and make it possible for a State, which wished to retain certain programs—as, for example, aid to the blind—on the present basis, to do so.

Coverage for assistance: This bill makes it possible for a State to receive Federal aid for assistance to any needy person and not exclusively for those over 65, blind, permanently and totally disabled, or those meeting the restrictive definition for aid to dependent children—as at present. Administration by categorical groups would, however, be optional with the States, provided the basis for establishing the categories was reasonable. Assistance could not, however, be paid to persons residing in public institutions other than medical institutions nor to patients in an institution for tuberculosis or mental disease.

Higher assistance levels: This bill would provide a more flexible, rational, and adequate financial base for assist-

ance payments in all States by making the following changes:

First. Ceilings, or the maximum payments subject to Federal aid would be increased to $75 a month for all adults and $37.50 for all children. Present maxima in old-age assistance, aid to the blind, and aid to the permanently and totally disabled are $55 a month; in aid to dependent children the present ceilings are $30 each for the first child and adult caretaker and $21 a month for each additional child. In both cases, however, the amounts are scheduled to be reduced, under existing law, on September 30, 1956.

Second. Matching on the average of all payments rather than in terms of each individual payment as at present would, however, make it possible to receive Federal matching for higher payments in cases of unusual need—provided these were offset by other payments below the maximum level.

Third. A new and simplified matching formula would replace the present complex and inequitable formula which neither recognizes the special needs of low-income States nor the great efforts made by some States to provide more adequately for their own needy. Under the proposed formula the total of all assistance payments—within the average ceilings as shown in 1 above—would receive a 62-percent Federal reimbursement in any State whose average per capita income was the same as that of the United States as a whole. For States above this average the percentage of Federal reimbursement would be proportionately decreased but would in no case fall below 50 percent. For States with a lower than average per capita income the percentage of Federal reimbursement would be proportionately increased but the maximum level of reimbursement would be 80 percent. Under this formula the needy in both the high- and low-income States would benefit: the former by the higher reimbursable ceilings and the latter by the higher rate of reimbursement.

Fourth. Welfare services provided by the public welfare agency would be subject to the same rate of reimbursement as assistance payments. Increasingly those persons turning to public welfare agencies for aid are those with special needs requiring knowledgeable service for their solution. Such service can often help speed the return of the individual to self-support, secure for him the care he needs from other sources, prevent serious or long-term future difficulties, and reduce the cost to the public of extended dependency. For example: many people needing medical care or rehabilitative service do not know what provisions are available or how to go about applying for them: many people are lingering in general or mental hospitals simply because they have no other place to go—and no one to help them find such a place; many people living in areas where their former source of livelihood has ceased to exist need help in moving to areas of new opportunity; many children might be saved from juvenile delinquency or other forms of costly social maladjustment if their parents received helpful guidance at the crucial time or—in cases where substitute family care was necessary—the child welfare services of the public welfare agency could make prompt and adequate provision for their adoptive or foster-care placement. An advantage of this bill to the child-welfare program is the fact that it permits child-welfare workers to apply assistance funds to the placement of needy children requiring foster care. The grave injustice done to this neediest group of children under the present act, which denies assistance to children not living with a close relative, was pointed out by the Welfare report of the Commission on Inter-governmental Relations.

Fifth. Simplified administration, with consequent benefits to those requiring public welfare aid as well as to those who do its work and pay its cost, is provided in this bill in several ways. Matching on the average of all payments, the optional elimination of categorical administration, and the provision of the same reimbursable formula for all types of aid would permit an enormous reduction in paperwork with subsequent reduction in the cost of overhead administration. The bill also requires that the program be administered by a single agency at each level of Government thus eliminating costly duplication, overlapping, and confusion of responsibility. From the point of view of the individual or family requiring help the advantage of a single agency is obvious.

Sixth. Availability of benefits: The bill makes it a condition of the broadened base of Federal financial assistance provided by this new title that its benefits should be available to all qualified persons without residence or citizenship requirements. No public welfare program can be considered to be fulfilling its function as the ultimate guarantee against individual need if it arbirtarily excludes needy persons solely because of their length of residence. The very factors that make it essential for the Federal Government to share the broad public welfare responsibilities of the States make it equally essential that such aid be available to all.

Seventh. The Virgin Islands and Puerto Rico: This bill rights a long-standing injustice toward our fellow American citizens in the Virgin Islands and the Commonwealth of Puerto Rico by extending to these jurisdictions the same program provisions as apply in the States and Territories.

Eighth. Confidential assistance records: This bill restores to all persons receiving assistance under this title the protection formerly required by all titles that the facts concerning their receipt of assistance be treated as confidential information.

Ninth. Personnel training: The bill recognizes the serious shortages in qualified public welfare personnel by providing special financial aid for training such personnel.

The text of the bill follows:

A bill to amend the Social Security Act to enable the States to establish more adequate public welfare programs, and for other purposes

Be it enacted, etc., That this act may be cited as the "Public Welfare Act of 1956."

SEC. 2. Effective July 1, 1956, the Social Security Act, as amended, is further amended by inserting at the end thereof the following new title:

"TITLE XVI—COMPREHENSIVE PUBLIC WELFARE PROGRAM

"*Purpose*

"SEC. 1601 (a) The Congress finds and declares that whereas the Nation's strength depends upon the welfare of its individual members and families and whereas, social insurance programs alone cannot anticipate all situations of individual need, therefore a program of public welfare to meet such needs is an essential part of the Nation's program of social security.

"(b) The purpose of this title is to enable each State to develop, as an optional alternative to the present programs of public assistance and child welfare services authorized by titles I, IV, V, X, and XIV. A comprehensive public welfare program providing (1) economic assistance on an individualized basis for those persons or families whose basic needs in accordance with standards established by the States, are not fully met through their own resources, social insurance, or other social measures, (2) welfare services for those who require aid in meeting their own needs, achieving self-support, or discharging their own responsibilities and for those who require special social protection because of youth, age, disability, or other special vulnerability, and (3) community welfare services.

"*Appropriations*

"SEC. 1602 (a) There is hereby authorized to be appropriated for the fiscal year ending June 30, 1957, and for each fiscal year thereafter, a sum sufficient to carry out the purposes of this title. The sums made available under this section shall be used (1) for making payments to States which have submitted, and had approved by the Secretary of Health, Education, and Welfare (hereinafter referred to as the Secretary) a State public welfare plan and (2) to enable the Secretary to extend and strengthen facilities for training and to make training available for personnel of State and local public welfare agencies by making grants to State agencies administering plans approved under this title, colleges, universities, and other approved educational institutions.

"*State public welfare plans*

"SEC. 1603 (a) To be approved under this title a State plan must—

"(1) Provide that it shall be in effect in all political subdivisions of the State and, if administered by them, be mandatory upon them;

"(2) Provide for such financial participation by the State, and for such distribution of funds, as to assure meeting the need of all eligible individuals throughout the State, as determined in accordance with standards established by the State;

"(3) (A) Either provide for the establishment or designation of a single State agency to administer the plan, or provide for the establishment or designation of a single State agency to supervise the local administration of the plan, and (B) provide that there will be not more than one agency of a local subdivision of the State designated or established to administer the plan within such subdivision;

"(4) Provide for granting an opportunity for a fair hearing before the State agency to any individual whose claim for assistance is denied or is not acted upon with reasonable promptness;

"(5) Provide such methods of administration as are found by the Secretary to be necessary for the proper and efficient operation of the plan (including methods relating to the establishment and maintenance of personnel standards on a merit basis, except that the Secretary shall exercise no authority with respect to the selection, tenure of office,

and compensation of any individual employed in accordance with such methods);

"(6) Provide that the State agency will make such reports, in such form and containing such information, as the Secretary may from time to time require, and comply with such provisions as the Secretary may from time to time find necessary to assure the correctness and verification of such reports;

"(7) Provide that the State agency shall, in determining need for assistance, take into consideration any other income and resources of an individual claiming assistance;

"(8) Provide safeguards which restrict the use or disclosure of information concerning applicants and recipients to purposes directly connected with the administration of the State plan;

"(9) Provide that all individuals wishing to make application for assistance shall have opportunity to do so and that assistance shall be furnished with reasonable promptness to all eligible individuals;

"(10) Provide, if the plan includes payments to or in behalf of individuals in private or public institutions for the establishment or designation of a State authority or authorities which shall be responsible for establishing and maintaining standards for such institutions;

"(11) Provide, if assistance is administered by categories, for a reasonable basis for establishing such categories which excludes from assistance no otherwise eligible individual; and

"(1) Provide that no aid will be furnished any individual under the plan with respect to any period with respect to which he is receiving old-age assistance under the State plan approved under section 2 of this act, and to dependent children under the State plan approved under section 402 of this act, aid to the blind under the State plan approved under section 1002 of this act, or aid to the permanently and totally disabled under the State plan approved under section 1402 of this act.

"(b) The Secretary shall approve any plan which fulfills the conditions specified in subsection (a) except that he shall not approve any plan which imposes, as a condition of eligibility for assistance or welfare service under the plan (1) any residence requirement which excludes any otherwise eligible individual actually residing, permanently or temporarily, in the State, or (2) any citizenship requirement which excludes a citizen of the United States.

"Payment to States

"SEC. 1604. (a) From the sums appropriated therefor, the Secretary of the Treasury shall pay to each State which has an approved plan under this title for each quarter after June 30, 1956 an amount, which shall be used exclusively for carrying out the State plan, equal to the Federal percentage for such State (as determined in accordance with section 1607 (a) of the total amounts expended during such quarter under the State plan, not counting so much of such expenditures for any month for assistance as exceeds the product of $75 multiplied by the total number of individuals 18 years of age and over who received assistance for such month plus the product of $37.50 times the total number of individuals under the age of 18 who received assistance for such month.

"(b) The method of computing and paying such amounts shall be as follows:

"(1) the Secretary shall, prior to the beginning of each quarter estimate the amount to be paid to such State for such quarter under the provisions of subsection (a), such estimate to be based on (A) a report filed by the State containing its estimate of the total sum to be expended in such quarter in accordance with the provisions of such section, and stating the amount appropriated or made available by the State and its political subdivisions for such expenditures in such quarter, and if the sum of such amount and the estimated Federal grant to be paid the State under such section is less than the total sum of such estimated expenditures, the source from which the difference is expected to be derived; and (B) such other data as to such estimated expenditures and such other investigations as the Secretary may find necessary.

"(2) The Secretary shall then certify to the Secretary of the Treasury the amount so estimated by the Secretary (A) reduced or increased, as the case may be, by any sum which he finds that his estimate for any prior quarter was greater or less than the amount which would have been paid to the State under subsection (a) for such quarter, and (B) reduced by a sum equivalent to the pro rata share to which the United States is equitably entitled, as determined by the Secretary, of the net amount recovered during any prior quarter by the State or any political subdivision thereof under the State plan; except that such increases or reductions shall not be made to the extent that such sums have been applied to make the amount certified for any prior quarter greater or less than the amount estimated by the Secretary for such prior quarter; *Provided,* That any part of the amount recovered from the estate of a deceased recipient which is not in excess of the amount expended by the State or any political subdivision thereof, for the funeral expenses of the deceased shall not be considered as a basis for reduction under clause (B) of this paragraph.

"(3) The Secretary of the Treasury shall, prior to audit or settlement by the General Accounting Office, pay to the State, at the time or times fixed by the Secretary, the amount so certified.

"Operation of State plans

"SEC. 1605. In the case of any State plan which has been approved by the Secretary, if the Secretary, after reasonable notice and opportunity for hearing to the State agency administering or supervising the administration of such plan, finds—

"(1) That the plan has been so changed as to impose any requirement prohibited by section 1603 (b), or that in the administration of the plan any such prohibited requirement is imposed, with the knowledge of such State agency, in a substantial number of cases; or

"(2) That in the administration of the plan there is a failure to comply substantially with any provision required by section 1603 (a) to be included in the plan; the Secretary shall notify such State agency that further payments will not be made to the State until he is satisfied that such prohibited requirement is no longer imposed or that there is no longer any such failure to comply. Until he is so satisfied, the Secretary shall make no further certification to the Secretary of the Treasury for payment to such State.

"Definitions

"SEC. 1606. As used in this title—

"(a) The term 'assistance' means money payments to or medical care in behalf of or any type of remedial care recognized under State law in behalf of needy individuals who have attained the age of 18 years and are not inmates of a public institution except as a patient in a medical institution and, with respect to needy individuals under the age of 18 years, money payments made to or medical care in behalf of or any type of remedial care recognized under State law in behalf of parents, relatives, or other individuals who assume responsibility for parental care and support of them, if such parents, relatives, or other individuals maintain a family home for such needy individuals: *Provided,* That such needy individuals (whether or not they have attained the age of 18 years) are not individuals who are patients in an institution for tuberculosis or mental disease.

"(b) The term 'welfare services' includes personal services performed by persons employed by the agency administering the plan, directed to any of the following ends: assisting the recipient of or applicant for assistance to meet his own needs, establish partial or total self-support, utilize existing resources, more adequately discharge his own family and other social responsibilities, or participate in community life; extending protective services and assuring care to children who are deprived of adequate parental or other responsible adult care; extending services to strengthen the family environment of children, older people, the handicapped, and others with special needs; acting as a source of referral, guidance, and facilitating aid; extending cooperative social services to other public agencies upon their request; stimulating both social agencies and individuals in the community to provide needed social services; establishing and maintaining standards for such services where the State law so provides.

"(c) The term 'medical care' means medical services for needy individuals through payments by the agency administering the plan (including payments of insurance premiums therefor) to persons, agencies, or institutions furnishing or procuring such services.

"(d) The term 'State' shall include the District of Columbia, Alaska, Hawaii, the Virgin Islands, and the Commonwealth of Puerto Rico.

"Federal percentage

"SEC. 1607 (a) The 'Federal percentage' for any State shall be 100 percent less than the State percentage; and the State percentage shall be that percentage which bears the same ratio to 38 percent as the per capita income of such State bears to the per capita income of the United States, except that the Federal share shall in no case be more than 80 percent or less than 50 percent.

"(b) The Federal percentage for each State shall be promulgated by the Secretary between July 1 and August 31, of each even-numbered year, on the basis of the average per capita income of each State and of the United States for the three most recent consecutive years for which satisfactory data are available from the Department of Commerce. Such promulgation shall, for purposes of this section, be conclusive for each of the eight quarters in the period beginning July 1 next succeeding such promulgation: *Provided,* That the Secretary shall promulgate such percentage as soon as possible after the enactment of this title, which promulgation shall be conclusive for the purpose of this section for each of the four quarters in the period July 1, 1956, and ending June 30, 1957.

"Administrative provisions

"SEC. 1608. The Secretary is authorized to establish within the Social Security Administration an Office of Public Welfare to administer the provisions of this title."

Guaranteeing Civil Rights

EXTENSION OF REMARKS

OF

HON. WILLIAM T. GRANAHAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 28, 1956

Mr. GRANAHAN. Mr. Speaker, in the 10 years since I first came to the Congress I have been pleased to see—and to

help bring about—a remarkable improvement in the status of civil rights. As we look back on these 10 years we cannot avoid being deeply impressed by how much that has happened to remove inequities and inequalities and to bring about a more healthy society in our democracy. During that time we have seen some of our own cities and States do exactly what we have maintained should be done nationally—and that is set up fair-employment practices and antidiscrimination agencies. And, nationally, the courts have been instrumental in bringing about some far-reaching changes in the American scene.

But this progress has not always been steady. There have been ups and downs. There have been periods of retrogression. It is my feeling we are in such a period right now. The tensions which have been building up in some areas, stimulated by those who refuse to conform to the law or who seek to delay the application of the law, have already led to some serious and even tragic consequences.

I am not taking the position here in the House that these issues are easily solved or can be met merely by words. But there is a need for speaking out on this subject, to demonstrate that those who oppose progress in civil rights are not in truth the voice of the American people or of the Congress.

Also, however, there is a need for action. Action has been too long delayed. That is why I have proceeded to introduce bills to assure greater adherence to and protection for the civil rights of the American people of whatever color or creed.

The greatest ally we have in the fight for full civil rights is that great instrument which was drafted in my city of Philadelphia, the Constitution of the United States. As has been said, the Constitution is colorblind. It applies equally to all. It is the rock of our freedom. It cannot be set aside by States acting on their own or by individuals who set up their own views or prejudices to be above the requirements and principles of the Constitution.

In this respect, the courts, as I said, have done a remarkable job in interpreting the Constitution in this field of civil rights. But the courts do not act in a vacuum. Cases must be brought. They must be fought up through the lower courts. They must present clear-cut constitutional issues in order to reach the highest court for final determination.

I am deeply proud that in the years of the Franklin D. Roosevelt and Harry S. Truman administrations the Department of Justice of the United States was always in the forefront in bringing civil-rights cases up through the courts to the Supreme Court.

In the past few years some people seem to have closed their eyes to some of the most glaring incidents of violation of civil rights. The Till case is a good example. There have been others. We read that in some States spiritual successors of the days of the lynch mob and the fiery cross are now busily at work whipping up hatred for the Negro.

Let us not for a moment fool ourselves that achieving integration in the schools can be accomplished if this hatred is allowed to go on unchecked and unchallenged. The excesses of the few must be stopped by law and by order—and by decency.

There is a role here for the churches. There is a role here for local law and order, and for State law, and for national justice. There is much which has to be done. But fundamentally, we must see to it that the rabble rouser or the fanatic or the lawless mobster cannot defy the laws of this country or of God.

In other words, Mr. Speaker, while we need tolerance and moderation and understanding and all the other things which go with accomplishing social change smoothly and effectively, we also need the authority of law and the punishment—swift and sure—of those who flagrantly defy the law.

Let us enforce the laws we have to protect the individual. If local appointees and elected officials will not or cannot enforce those laws to protect the individual, then the States must step in; and if they fail, then the Federal Government must exercise its responsibilities under the Constitution to guarantee the rights of the individual.

If more laws are needed, let us pass them. I have introduced the so-called civil-rights package of proposed laws which are intended to nail down and make clear the responsibilities of the Federal Government in this field, but it seems to me that effective and active and vigorous enforcement of laws now on the books would go a long way toward resolving the issue.

How can it be that a boy can be kidnaped and murdered but no one is convicted of a crime, such as happened in the Till case? How does it happen that Negroes can be shot and killed in some areas but the person who wields the gun is found innocent of wrongdoing on the plea of self-defense against, for instance, an unarmed Negro?

Cases of this kind help to bring about a condition in which hate groups can flourish, because the haters develop a defiance of law and feel that they are immune from punishment in their mob activities against Negroes.

As one who has voted for and supported antilynch, antipoll tax, and FEPC bills, and who believes in their principles, I call upon this country to act now to end these terrible incidents by prompt and decisive policies to guarantee civil rights for all.

Railroad Retirement Benefits

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 28, 1956

Mr. BYRD. Mr. Speaker, under leave to extend my remarks, I wish to insert a statement which I recently submitted to the Subcommittee on Transportation and Communications, House Interstate and Foreign Commerce Committee. This statement was in support of H. R. 3037 which is similar to my own bill, H. R. 8828. H. R. 3037, introduced by Congressman CHARLES BENNETT, of Florida, proposes three ways of liberalizing railroad retirement benefits. My statement, which follows, explains its provisions:

STATEMENT OF ROBERT C. BYRD, MEMBER OF CONGRESS, SIXTH WEST VIRGINIA DISTRICT, BEFORE THE SUBCOMMITTEE ON TRANSPORTATION AND COMMUNICATIONS, HOUSE INTERSTATE AND FOREIGN COMMERCE COMMITTEE

Mr. Chairman, I appreciate this opportunity to testify here today in favor of H. R. 3087, introduced by Congressman BENNETT of Florida. I have introduced a similar bill, H. R. 8828. This bill proposes three ways of liberalizing railroad retirement benefits. It provides, first, retirement at age 60 with 30 years of service, or with 35 years of service regardless of age. Secondly, it provides for computation of credit for service prior to January 1, 1937, on the basis of the five highest years rather than on the basis of average earnings for the years 1924–1931. Thirdly, it provides a 15 percent increase across the board to pensioners, annuitants, and survivors.

Reducing the retirement age after many years of service is necessary to care for those who lose their railroad positions at advanced ages, but before they have reached 65. Perhaps 65 as a retirement age is not a great hardship on rail employees who can remain in their employment until attaining that age, but it does seem that Congress should attempt to give some relief to employees who, through no fault of their own, lose their position a few years before becoming 65.

The Railroad Retirement Act was established in 1934 to deal with the hazards within the industry, and there is no greater hazard which can confront a worker today than to lose one's job late in life after many years of faithful service to the employer of his choice. This has happened to a large group of shop employees in the past. Those employees were deprived of their living. They have used up their unemployment insurance, sold their savings bonds, depleted their savings, and they are desperate when they must take a reduced pension because they are not 65 years of age. There is another class of employees who are interested in this provision—those who are in poor health and cannot qualify for a disability pension under the present act. This class would gladly retire, and it would be in the interest of all concerned if employees in this condition were availed of the opportunities for earlier retirement.

The elimination of the test period 1924–31 is another provision of this bill that is very important to all railway employees who had service with the rail lines prior to 1937 when the present act became law. The using of this period to determine annuities brings in the depression years of 1929–30, when some of the railway employees were only working a few days per month, and using this as a basis is the reason why only a little more than 1 percent today qualify for the maximum annuity or pension of $165.60 per month. A precedent has been established by social security in which the 4 highest years are used. H. R. 3087 would substitute the 5 highest years in lieu of this low earning period which has no relation to our present economy. There are over 60 million workers today in this country, and I say without fear of contradiction that none of them work at the level of earnings they made in the years 1924–31. Every railway employee who retires before 1967 will have to use prior service credits, and this feature alone accounts for the fact that few retired railway workers have any conception of what their annuities will be

until they retire and the sad news is broken to them by the Railroad Retirement Board.

The 15 percent increase would benefit all annuitants and pensioners. This would be of general help in the financial problems faced by all retired rail employees. Most of the retired people who are trying to live on a pegged income of a pension today find it very hard to cope with the high prices, and they learn that their pension dollars buy so little. In 1951 the last increase was made in their rail pensions and annuities. Several increases have been granted members of the various labor crafts during this interim. Retired railroaders feel that they are the forgotten creatures who contributed generously toward the national economy while employed in the heyday of their working career. They look forward, most hopefully, to this Congress for relief from an intolerable situation.

Thank you again, Mr. Chairman, for permitting me to appear here today in behalf of the measure introduced by Congressman BENNETT. In introducing a similar bill, I recognized the need for such legislation, and I sincerely hope that your distinguished committee will be able to act favorably upon H. R. 3087.

Santa Fe Railroad: Misleading Advertising

EXTENSION OF REMARKS
OF
HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 28, 1956

Mr. VANIK. Mr. Speaker, in yesterday's newspaper I was impressed by a large advertisement on behalf of the Santa Fe Railroad which advertised the fact that this railroad was spending $102 million for progress in building for the great future growth in America's industry and population. This ad points out that this is the largest sum this railroad has ever budgeted for capital improvements in a single year and that the costs of these improvements were computed to $270,000 per day for 1956.

In the next portion of this ad it is stated that the largest part of this expenditure will be for 5,210 additions to the railroad's fleet of freight cars, including many of new and improved design.

In one of its most emphatic sentences, this advertisement states that all of this progress comes from Santa Fe dollars—earned dollars—not a single penny from taxes paid by taxpayers.

This advertisement is typical of the great quantity of misleading advertisement which is being disseminated to the American public about the public spirit of the corporate spending. Nowhere does this advertising tell the public the truth about the fast tax writeoff certificate which makes it possible for the railroad to pay for the great bulk of this expansion out of current income which would normally flow to the Public Treasury in the form of taxes. Through the use of the rapid amortization device, the railroad will be able to amortize this investment and siphon off its profits to this improvement during the period of the next 5 years. In this way, the railroad cars get constructed but most of the money is money that would otherwise be public tax funds.

When they tell you that this progress comes from Santa Fe's dollars—earned dollars—and not a single penny comes from taxes you pay, they are forgetting to tell you that the dollars they use are dollars short-circuited from the United States Treasury in taxes deferred and perhaps never paid.

So in the end every taxpayer is helping to contribute to the great progress of the Santa Fe this year. Let us give credits where they are due.

Foreign Aid on a Permanent Basis

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Thursday, March 29, 1956

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Take the Coach Out," published in the Indianapolis Star of March 20, 1956.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TAKE THE COACH OUT

Just suppose an Indiana high-school basketball coach had what was considered the best team, man for man, in the State. And suppose he decided at the beginning of the season to use a zone defense. And suppose that his team lost their first 10 games even though their shooting percentage was about .450 because their defense failed to stop the offense of the other teams. Would it not seem logical to conclude that the coach ought to switch his defense to a man-to-man defense instead of sticking to a system that failed 10 times in a row?

Now that is just about the same position that our State Department is in today. For 10 years straight the State Department has been sending an average of $5 billion a year abroad in foreign aid. The idea is to win the cold war by helping our allies become strong and united and to win more allies to our side. Yet today, after 10 years of doing the same thing defensively, what do we find? We find our allies less united. The neutralists are more neutral. There is less military strength abroad than was promised. And the Soviet Union has been winning skirmish after skirmish in the cold war both in taking territory and in winning support from the uncommitted nations.

Now with such a record of repeated loss in the 10 years of foreign aid, would it not seem logical to conclude that the State Department ought to switch its tactics? Wouldn't some other means of defense seem called for to replace the practice of sending $5 billion of foreign aid abroad and getting no appreciable results? It would seem so to us.

Yet the State Department is now going before Congress again and asking for another $4,900,000,000 for foreign aid. In addition it wants to put the foreign aid program on a permanent basis. The experts seem to have concluded that we must do again in the next 10 years what has failed to work in the last 10 years. It just doesn't make sense.

We think the American people and Congress should insist that we either get rid of the coach who has lost the first 10 games through faulty defense, or the coach should be told to try a new kind of defense. The foreign aid program should be either overhauled or replaced. In our opinion, it should be abolished and in its place we should adopt a selective program of giving assistance in money and arms only to those nations that cooperate in creating unified defenses and in adopting policies that will weaken, not strengthen, the Communist foe.

Now what is unreasonable about that?

Relief for Truly Small Independent Natural Gas Producers

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Thursday, March 29, 1956

Mr. DOUGLAS. Mr. President, one of the great newspapers of the country which has followed the controversy over natural gas legislation with most care and insight is the Denver Post. A recent editorial in that paper makes a suggestion which is so sensible and so practical that it is difficult to see any reasonable basis for opposing it.

Despite the unfortunate and arrogant lobbying in behalf of outright exemption legislation earlier this session, I am willing to join any Senators who may wish to push legislation for the relief of the truly small independent natural gas producers and to allow all producers rates of return comparable to their risks. If no one does so, we must conclude that the only real pressure is for the big producers, whose total exemption would clearly hurt millions of consumers.

For the information of Members of Congress, I ask unanimous consent to have printed in the Appendix of the RECORD the editorial entitled "How About a Reasonable Gas Bill?" and published in the Denver Post of March 8, 1956.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HOW ABOUT A REASONABLE GAS BILL?

Now that tempers have had time to cool, following President Eisenhower's veto of the Harris-Fulbright gas bill, it may be possible to consider the matter of gas regulation more calmly than before.

Some new natural-gas legislation is desirable, although the Harris-Fulbright bill, which would have enriched producers by removing them from all effective regulation, was not the proper answer.

There is need for a law which would:

1. Exempt from regulation the thousands of small producers whose sales have little if any effect on the overall price of gas to consumers while keeping under regulation the few large producers who are the price-setters in the industry.

2. Provide for the regulation of the large producers on a basis which would recognize that the gas-producing business, unlike other utility businesses, involves certain risks in exploring for new gas supplies and should receive an appropriate price reward as a result.

This second purpose could be accomplished easily by giving the Federal Power Commission, the Federal price regulatory body, authority to give gas companies a higher percentage of return on their investment than the 6 percent (approximately) that is nor-

mally allowed electric power, telephone, and transportation utilities.

A bill containing these provisions would be in line with the idea expressed by President Eisenhower in his veto message.

The President stressed the fact that suspicious circumstances surrounding the passage of the bill were the primary cause for his veto. But he went on to say he wants a gas bill which would encourage the search for oil and include specific language protecting consumers in their right to fair prices.

In view of that last remark, it seems probable that the President would have vetoed the Harris-Fulbright bill even if the incident of the $2,500 donation to a Senator's campaign fund had not arisen. It is impossible to find in the Harris-Fulbright bill any specific language protecting consumers.

Of course, a law exempting small producers from regulation and providing for prices in proportion to risks would not satisfy many of the oil and gas companies which have been exerting their influence on behalf of the Harris-Fulbright bill.

Large producers would not want the little fellows exempted. These large producers hope to trade on the sympathy that Congressmen always feel for small-business men. The big companies hope to receive more favorable consideration if they can keep all producers, large or small, under the same kind of regulation.

Neither would the vehement backers of the Harris-Fulbright bill be satisfied with prices based on a recognition of business risks. Nothing short of complete exemption from regulation, with full authority to fix their own prices, will ever suit them.

It is to be hoped that, in spite of the unyielding attitude of some of the large producers, a majority can be found in both Houses of Congress to vote for a sensible gas bill which will contain the protection for consumers which President Eisenhower considers essential.

We may be sure that unless a new gas bill is passed, gas producers, and possibly the Federal Power Commission itself, will do all in their power to keep present price regulatory laws from working satisfactorily.

Trade journals of the oil and gas industry are already talking hopefully of the possibility that State governments may step in to restrict the amount of natural gas available for interstate commerce. If that should occur, the gas industry will gleefully announce that Federal interference with prices is drying up the gas supply, just as supporters of the Harris-Fulbright bill said it would.

According to the Oil & Gas Journal, only 1 of the 5 members of the Federal Power Commission believes it is practical to regulate gas producers under present law.

If the Commission should choose to take the position that it is confronted with an impossible job in trying to regulate thousands of gas producers, large and small, it could make such a mess of present regulatory procedure that arguments in favor of no regulation would seem to have new validity.

With the Harris-Fulbright bill definitely dead, Congressmen who are interested in the welfare of producers and consumers will do well to lend their support to efforts to devise reasonable and practical regulation.

The Status of Forces Treaty

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 28, 1956

Mr. BOW. Mr. Speaker, it gives me great pleasure to announce that the legislature of the State of California has adopted without dissenting vote a resolution expressing dissatisfaction with the NATO Status of Forces Treaty and urging the Federal Government to terminate that agreement at the earliest possible time.

Senate Joint Resolution 1 was introduced March 6, 1956, by a distinguished group of California Senators under the leadership of Senator Hugh P. Donnelly. It passed the senate on March 8 by a vote of 28 ayes, none opposed. It passed the assembly on March 21 with a vote of 63 ayes, none opposed.

I congratulate the State of California on the patriotism and discernment shown by the members of its legislature, of both political parties, in this unanimous expression in favor of restoring the constitutional rights of American servicemen. I hope that this fine example will be followed in other States, and that the Congress of the United States will recognize and act on this problem.

I am grateful to Mr. John M. Hanley, of Palo Alto, for keeping me informed on the progress of the resolution.

Under leave to extend my remarks, I include the list of senators sponsoring the resolution and the text of the resolution:

SENATE JOINT RESOLUTION 1, RELATIVE TO THE STATUS OF FORCES TREATY

(Introduced by Senators Donnelly, Dorsey, Coombs, Gibson, Byrne, Berry, Burns, Kraft, Erhart, Dilworth, Thompson, Breed, Brown, Williams, Abshire, McBride, Cunningham, John F. McCarthy, Harold T. Johnson, Short, Arnold, Hulse, Desmond, Busch, Regan, Robert I. McCarthy, Cobey, Way, Hollister, Richards, Ed. C. Johnson, Farr, Parkman, and Sutton, March 6, 1956.)

Whereas on June 19, 1951, the parties to the North Atlantic Treaty, including the United States, entered into an agreement commonly referred to as the "Status of Forces Treaty," which was ratified by the Senate of the United States on July 15, 1953; and

Whereas this agreement confers on each of the contracting nations criminal jurisdiction over the military personnel of the other contracting nations stationed in the former; and thus permits American military personnel accused of crime to be tried in the courts and according to the laws of other countries; and

Whereas in many countries where American military personnel are stationed the law does not provide the same safeguards as are provided by the courts of this country, including such fundamental requirements of due process as a full statement of the specifications of the crime alleged, right to bail, presentation to the grand jury in all serious cases, fair trial by an unbiased judge and jury, confrontation of witnesses, presumption of inocence, and entitlement to counsel; and

Whereas foreign military personnel stationed in this country would under the agreement be placed in a better position than our servicemen since they would be entitled to the safeguards mentioned, indicating that the agreement is not truly reciprocal; and

Whereas there is no justification whatever for this country continuing such an arrangement that is so unfair and unjust to those who are making the greatest sacrifices to serve the Nation and who are entitled to the full protection of our Government: Now, therefore, be it

Resolved by the Senate and Assembly of the State of California (jointly), That the members of the Legislature of the State of California take this means to indicate their dissatisfaction with the so-called Status of Forces Treaty, and to urge the Federal Government to terminate that agreement at the earliest possible time; and be it further

Resolved, That the secretary of the senate be hereby directed to transmit suitably prepared copies of this resolution to the President and Vice President of the United States, to the Speaker of the House of Representatives, to the Secretary of State of the United States, and to each Senator and Representative from California in the Congress of the United States.

The Public Assistance Amendments of 1956 and the Child-Health and Welfare Amendments of 1956

EXTENSION OF REMARKS
OF
HON. JERE COOPER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 29, 1956

Mr. COOPER. Mr. Speaker, on February 7, 1956, I introduced legislation, H. R. 9120, which would amend the public assistance titles of the Social Security Act. I introduced this legislation as chairman of the Committee on Ways and Means at the request of the administration. My purpose in introducing H. R. 9120 was to permit public study and comment.

My distinguished colleague on the Committee on Ways and Means, the Honorable DANIEL A. REED, of New York, introduced similar legislation, H. R. 9091.

I have today announced that the Committee on Ways and Means is tentatively scheduled to begin public hearings on Thursday, April 12, 1956, on these two bills, as well as on H. R. 10283 introduced by me, and H. R. 10284, introduced by Mr. Reed, of New York, relating to amendments to the provisions of the Social Security Act pertaining to child welfare services. These latter two bills were also introduced at the request of the administration. In announcing these hearings I indicated that the committee would also receive testimony on other bills amending the public assistance titles and related provisions of the Social Security Act.

Mr. Speaker, at the time of introducing H. R. 9120, I issued a press release explaining the principal features of the bill. For the benefit of the Members of Congress and other interested persons, I would like to include that release at this point in the RECORD. In addition I would like to include a summary prepared by the Department of Health, Education, and Welfare on the Child-Health and Welfare Amendments of 1956, H. R. 10283.

The matters follow:

CHAIRMAN JERE COOPER, DEMOCRAT, OF TENNESSEE, HOUSE COMMITTEE ON WAYS AND MEANS, TODAY ANNOUNCES INTRODUCTION OF LEGISLATION AMENDING THE PUBLIC ASSISTANCE TITLES OF THE SOCIAL SECURITY ACT; H. R. 9120

Hon. JERE COOPER, Democrat, Tennessee, chairman of the House Committee on Ways and Means, today announced that he had introduced legislation, H. R. 9120, at the request of the administration to amend the public assistance and related provisions of

the Social Security Act. Chairman COOPER's complete statement is as follows:

"As chairman of the House Committee on Ways and Means, I have today introduced legislation, H. R. 9120, to amend the public assistance titles and related provisions of the Social Security Act. This legislation was prepared in the Department of Health, Education, and Welfare and embodies the public assistance recommendations made by President Eisenhower in his state of the Union message and in his budget message. I have introduced this legislation at the request of the administration.

"While no action has yet been scheduled by the Committee on Ways and Means on this legislation, the introduction of the bill will make it available for public study and comment. It is probable that some legislative action will be taken by the Congress this year on public assistance, in view of the fact that the present matching formula (the so-called McFarland amendment) for the payment of Federal funds to the States for public assistance purposes is scheduled to terminate September 30, 1956.

"The principal features of the bill are as follows:

"1. Extension of the 1952 temporary matching formula: The bill would extend from September 30, 1956 to June 30, 1959 the present formula for Federal matching of assistance payments. Under the present formula, the Federal share in old-age assistance, aid to the blind, and aid to the permanently and totally disabled is four-fifths of the first $25 of a State's average monthly payment per recipient, plus one-half of the remainder, within individual maximums of $55. For aid to dependent children, the Federal share is four-fifths of the first $15 of the State's average monthly payment per recipient, plus one-half of the remainder, with individual maximums of $30 for the adult, $30 for the first child, and $21 for each additional child in a family. In the absence of such an extension of the present matching formula, on October 1, 1956, the Federal share in expenditures for old-age assistance, aid to the blind, and aid to the permanently and totally disabled would be reduced to three-fourths of the first $20 of the average monthly payment per recipient, plus one-half of the remainder up to a maximum of $50 on any individual payment. In aid to dependent children, there would be similar changes in the Federal formula. This extension of the current matching formula would be effective only with respect to persons who are on the public assistance rolls before July 1, 1957 and to those persons who are added to the rolls after that date who are not receiving old-age and survivors insurance benefits. It is estimated that this provision will cost $155 million in fiscal year 1957 (9 months' extension) and $210 million annually in fiscal years 1958 and 1959.

"2. Revised matching formula for persons added to the old-age assistance rolls after June 30, 1957 who receive old-age and survivors insurance benefits: The bill would provide a new matching formula with respect to old-age assistance recipients who are added for the first time to the public-assistance rolls after June 30, 1957 and who receive old-age and survivors insurance benefits. Federal matching-in-assistance payments in regard to persons in this category would be 50 percent of the average monthly payment per recipient up to a maximum of $55 on the payment to any one recipient. It is estimated that this provision will save approximately $6.5 million in fiscal year 1958 and $73 million annually by the year 1967.

"3. Matching of assistance expenditures for medical care: The bill would amend the formula for determining the Federal share of assistance expenditures to provide separate dollar-per-dollar matching of State expenditures for medical care in behalf of assistance recipients, including expenditures for insurance premiums for medical care, up to a specified maximum. This maximum is determined by multiplying $6 a month by the number of adult recipients and $3 a month by the number of child recipients. There is also included in the bill a provision for the establishment of an advisory council on medical care to advise the Secretary of Health, Education, and Welfare. These provisions would be effective as of July 1, 1957. It is expected that the cost of this feature of the bill would be $65 million in fiscal year 1958 and $110 million annually by fiscal year 1967.

"4. Federal assistance for the training of public welfare personnel: The bill would assist the States in paying for the training of skilled workers to deal with the problems of persons receiving assistance. The Federal Government would share in State expenditures for this purpose for a 6-year period with the Federal share being 80 percent for the first 4 years and 66⅔ percent for the remaining years. The funds are to be used by the States to make grants to institutions of higher learning for training of personnel for employment in public assistance programs and for establishing fellowships and special short-term courses of study. The bill would also provide for Federal payment of certain costs connected with research and demonstration projects in social security. It is expected that the cost of these provisions in fiscal year 1957 would be $500,000 and $5 million in fiscal year 1958.

"5. Extension of aid to dependent children: The bill would liberalize the present provisions applicable to the aid to dependent-children program so as to extend the list of relatives with whom a child may live and receive aid to include first cousins, nephews, and nieces. The bill would also eliminate the school attendance requirement for children 16 and 17 years of age thereby permitting disabled children and other children unable to attend school to receive assistance. This provision would be effective July 1, 1957, and would have an annual cost of $2 million.

"6. Limitation on payments to Puerto Rico and the Virgin Islands: The bill would increase the dollar limitation now in effect for Federal public assistance grants to Puerto Rico and the Virgin Islands by 25 percent after June 30, 1956. For Puerto Rico the dollar limitation on annual Federal assistance grants would be raised from $4,250,000 to $5,312,500, and for the Virgin Islands $160,000 to $200,000. It is expected that the cost of this provision would be $1,102,500 annually.

"7. Self-support and self-care: The bill would amend the purpose clauses of the public assistance titles to make explicit that restoration of recipients of public assistance to self-support or self-care is a program objective, and that strengthening of family life is an objective in the program of aid to dependent children.

"It is my expectation that thorough public hearings would be held on this legislation in the event a decision is made by the Committee on Ways and Means to give consideration to the bill. I believe it essential that very careful study be given to the bill before it is acted on by the Congress and that careful examination be made of the effect that the financing features of the bill would have on the public assistance programs of the respective States. The humanitarian purposes of the public assistance program, modest as they may be, must be carefully safeguarded and developed so that our Nation's needy may be assured an adequate standard of living and necessary medical care."

SUMMARY OF CHILD HEALTH AND WELFARE AMENDMENTS OF 1956—H. R. 10283

The bill would amend part 3 of title V of the Social Security Act, relating to child-welfare services, in a number of respects. It would also amend parts 1 and 2 of that title, relating to maternal and child health and crippled children's services, with respect to special project grants. These amendments would be effective July 1, 1956.

CHILD-WELFARE SERVICES

Rural areas: The present limitations requiring that Federal child-welfare funds may be used for local child-welfare services only in predominantly rural areas would be removed. This would give greater flexibility to the States. Federal funds could be used in any part of the State where they are effective in establishing, extending, and strengthening child-welfare services. Emphasis would, however, continue to be placed on services in rural areas, as in the maternal and child health and crippled children's provisions of the present law.

Foster care: The bill would make explicit the authority to use Federal funds for the extension and improvement of foster care.

Amount authorized for annual appropriation: The amount authorized for annual appropriations for grants to the States for child-welfare services would be increased from the present $10 million to $12 million for the fiscal year ending June 30, 1958, and to $15 million for each year thereafter.

Allotment formula: In order to make the allotment of funds consistent with the above changes concerning rural areas and foster care, the bill would change the present statutory formula under which allotment is made entirely on the basis of rural child population under the age of 18. Allotments to the States of funds appropriated in any year for this purpose would, instead, be made (after a flat allotment) on the basis of the need of each State for financial assistance in carrying out its plan, as determined by the Secretary of Health, Education, and Welfare after considering the relative population under 21 and the relative rural population under that age.

The flat allotment referred to above, which would be made first, would be $40,000 if the appropriation were $10 million. It would be reduced proportionately if the appropriation were less than $10 million and would be raised proportionately if the appropriation were increased to the higher amounts authorized by the bill.

Matching: Each State's allotment would be available for paying the Federal share of the cost of the expenditures under the State plan, with the balance being made up from State and local funds. The Federal share would vary inversely with the State's relative per capita income between a minimum of 33⅓ percent and a maximum of 66⅔ percent, with the share for the State with a per capita income equal to that for the United States being 50 percent. The Federal share for Alaska and Hawaii would be set at 50 percent and for the Virgin Islands and Puerto Rico at 66⅔ percent.

Reallotment: A new provision would be added to permit redistribuation of Federal funds, after a State certifies that any portion of its allotment will not be required for its program. The portions so certified would be reallotted from time to time to other States which the Secretary determines have need for and will be able to use amounts in excess of their original allotments. The reallotment among these States would be based on their State plans after taking into consideration the relative size of the population under age 21, the relative size of the rural population under such age, and the relative per capita income of the States eligible for the reallotment.

Special project grants: A new provision would authorize up to 15 percent of the funds appropriated for grants for child welfare services to be earmarked (in the appropriation) for grants for special projects of regional or national significance. These special project grants would be available to State public-welfare agencies, and, with the

concurrence of such agencies, to any public or nonprofit institution of higher education or research.

Return of runaway children: The bill changes the present law by raising the age limit of children who may be returned to their community in another State through the use of Federal child welfare funds from 16 years to 18 years, and adding authorization for the use of these funds for maintaining the children pending their return (for a period not exceeding 15 days). These costs, and the costs of the return of the child, could be met when they cannot be met by those legally responsible for the child's support.

SPECIAL PROJECTS RELATING TO MATERNAL AND CHILD HEALTH SERVICES

The bill authorizes up to 12½ percent of the annual appropriation for grants for maternal and child health services to be earmarked (in the appropriation) for special projects of regional or national significance. This percentage represents the same proportion of the total annual appropriation as is reserved at present for special projects grants. These special project grants would be available not only to the State agencies administering the State plans, as at present, but also, with their concurrence, to other public and nonprofit institutions of higher learning or research.

SPECIAL PROJECTS RELATING TO CRIPPLED CHILDREN'S SERVICES

Amendments, similar to those described above for maternal and child health services, would be made by the bill in the crippled children's provisions of the Social Security Act.

Greer County, Okla., Farmers Plead for the Right to Life, Liberty, and the Pursuit of Happiness

EXTENSION OF REMARKS
OF
HON. VICTOR WICKERSHAM
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 28, 1956

Mr. WICKERSHAM. Mr. Speaker, the following letter is a plea from the residents of my home county of Greer, in the State of Oklahoma, who have devoted a lifetime to farm operations:

MANGUM, OKLA., *March 6, 1956.*

Hon. VICTOR WICKERSHAM,
Member of United States House of Representatives, Washington, D. C.

DEAR VICTOR: We, the people of Greer County, Okla., who are dependent directly or indirectly upon agriculture for a living do appreciate what you are doing for agriculture. We compliment you for your attitude and the work that you are doing in helping to secure a fair price for all agricultural products. The farmer is entitled to 100 percent of the cost on his products, like the manufacturer gets for his products.

Price supports of 90 percent of parity on all agricultural products will go a long way toward keeping the farmer on the land. The farmer will have the money to pay his debts, buy the necessities of life, and a few luxuries. The farmer's purchasing power helps to keep the laborer employed. With the farmer and laborer working, our national economy will continue to be strong and move forward. This forward movement will prevent another depression of prices like the country experienced between 1929 and 1932.

Again we thank you for what you are doing to help secure a support price of 90 percent or more on all agricultural products.

The farmer, the laborer, and the businessman in our country can continue to make a respectable living.

Respectfully yours,

John F. Radney, Farmer and President of Greer County Farmers Union; J. D. Gray, Real Estate and Insurance; Weaver Creed, Mayor, City of M... gum; Edgar H. Pruitt, Farmer; R. S. Morgan, Manager, Farmers Union Cooperative Gin; Zearl E. Lowe, Druggist; Guy R. Block, Merchant; George Terry, Manager, Farmers Cooperative Gin Board; J. S. Russell, Farmer and Rancher; W. H. Pierson, Farmer; Charles T. House, Hardware.

Let's Fight for What Farmers Deserve

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 28, 1956

Mr. BOW. Mr. Speaker, the April Farm Journal contains an excellent editorial setting forth a minimum program to provide American farmers with their rightful share of the national income.

The 17 points listed are sound and fair, and should be borne in mind by all of us as we consider farm legislation during the next few weeks. I commend them to the membership of the Congress:

LET'S FIGHT FOR WHAT FARMERS DESERVE

Because the Nation needs an expanding, prosperous agriculture rather than a shrinking one, the battle for progress in farming dare not cease. Income losses for many, even if not for all farmers, have grown serious.

Farm Journal editors here set out 17 points on which we strongly believe work needs to be done. Others could be added. These we think are basic.

1. Government must recognize that it demanded high production for the needs of war, and should face fully the responsibility for readjustment. It paid off the makers of planes and guns so they could return to normal. It should be fully as fair with farmers.

2. This country is rich enough to relieve victims of disaster anywhere here, and in many places abroad. When drought and crop failure hit farmers they are no less deserving of outright relief.

3. War veterans and other farmers who have earned a fair equity in land or equipment ought to have enough help, private or public, in the way of further credit, that they will not lose what they have built up.

4. Private and Government agencies should push energetically to increase our sales in foreign markets; and no veto by the State Department on deals with the free world should be permitted.

5. The prospects for new markets and new uses for farm products have hardly been scratched. Research in these fields should be doubled and redoubled.

6. The kinks that cause actual waste and extra costs in distribution ought to be brought into the open and rooted out. They eat into farmers' profits.

7. New products have brought big prosperity to hundreds of American industries. Agriculture must have more ways to diversify. A large-scale research effort is overdue to find new crops farmers can make money with. This is a Government job.

8. No letup should be permitted in research to reduce our costs of production, but more of the work should seek to lower costs in other ways than simply by increasing output. This calls especially for research in marketing and selling.

9. The nonfarm public should be helped to learn about farm situations. The ignorant insults to farmers which have lately come from writers who should know better would not be tolerated if the public were informed. Those in trouble deserve understanding, not sneers.

10. Farm credit practices need to be reexamined to make sure that farmers get as fair a deal as anyone else. Changes in farm business have increased the need for 2- to 10-year loans for sound investments like equipment and buildings which take a while to pay off.

11. Wherever it can be shown to help, we should have tariff protection against low-cost foreign competitors. Every country tries to sell here, and often will subsidize exports, in order to get dollars. Other places need foreign foods and fibers worse than the United States does.

12. Government could well consider some new and real incentives to locate more industries in rural areas. Thus nearby but off-the-farm jobs could help many families to earn steadier incomes. It may well be one of the most practical things we can do for farmers. Wide dispersion of industry is desirable for defense and, in general, has proved to be good business.

13. Vocational courses should be developed in rural high schools for nonfarm subjects. They have mighty little of this now. Let's face the fact that not every farm boy will farm, and give those who choose a start toward being scientists, engineers, salesmen, or mechanics—or editors.

14. Cooperatives have saved and made farmers lots of real money. In general private businesses are far more efficient and fair than was true 40 years ago, but cooperatives have not reached their limits.

15. Feather-bedding practices, or pay without full value in work, should be rooted out everywhere it exists in industry, transportation, labor, or Government.

16. Nobody should be shielded from competition. No one—farmers, middlemen, nor anyone else—can be blamed for buying as cheaply and selling as high, and making as much profit, as they can. But Government should see that competition is full, free, and fair.

17. Farmers will do best with the fullest freedom to decide how they want to farm. The agricultural good and public good may require some regulation of farming from here on—just as we have to regulate traffic—but free individual decision should be basic in American agriculture. We need to keep as much of it as possible.

Use of Tennessee Valley Authority Power Revenues To Meet Growing Power Needs

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 29, 1956

Mr. CANNON. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including recent correspondenec from Comptroller General Joseph Campbell concerning use by the Tennessee Valley Authority of its power revenues to add generating units to existing projects to meet growing power needs, and a statement which I issued

on March 28 commenting upon this correspondence and the facts in the matter.

The statement and correspondence follow:

STATEMENT OF CONGRESSMAN CLARECNCE CANNON, OF MISSOURI, CHAIRMAN, HOUSE APPROPRIATIONS COMMITTEE

The letter from Comptroller General Joseph Campbell to Congressman JOHN TABER on March 26 relative to TVA is completely misleading. His purpose is quite clear, for his letter contains the following statement:

"This letter is not addressed to the question of the TVA's statutory authority * * * except to recommend that the present law be amended."

It will be recalled that Mr. Campbell was a member of the Atomic Energy Commission, which approved the Dixon-Yates contract. The terms of that contract got so odious that even its proponents wanted it set aside. Now we find the same Mr. Campbell telling the Congress it should repeal part of the TVA Act. He seeks to do in his new suit what he couldn't do in his old hat.

To support his demand for amending the TVA Act, Mr. Campbell would completely mislead the public as to the situation. It would appear that Mr. Campbell is going out of his way when he uses his position as Comptroller General to press further his views.

It is to be noted, however, that Mr. Campbell—in his letter recognizes that TVA does have the right to use revenues to add additional units at existing plants after meeting its obligations to the Government.

If that were not so, Mr. Campbell would not be urging the Congress to repeal the right of the TVA to meet its growing power needs at existing plants from its revenues. As Mr. Campbell well knows, Congress has refused further direct appropriations and has not passed legislation to enable TVA to meet its growing needs by issuing bonds. The only way left is for TVA to use its power revenues to add units to existing projects.

The Democratic leadership believes the people of the valley have a right to expect its power supplier to plan for the future needs of its service area.

The facts are greatly different from what Mr. Campbell very adroitly implies. The letters of intent issued for the 7 new generating units referred to in Mr. Campbell's letter simply represent the schedule upon which TVA believes capacity should be added to meet the electricity requirements of the area it serves.

Taken as a whole, the Comptroller General's letter appears to be intended to frighten the Congress into a belief that TVA has taken some extraordinary action and has committed the Government to a program unforeseen and unanticipated. He is wrong. There is no surprise in the fact that new capacity must be added to the TVA system. There is nothing extraordinary about the issuance of letters of intent.

These letters served to place TVA's units on the manufacturers' construction schedules so that when and if firm orders are placed, many months of time will be saved in delivery dates. Substantial price increases were put into effect by the manufacturers of the turbo-generators early in September, but the options were secured at the prices in effect prior to the increase. The saving will run into millions of dollars for the taxpayers.

COMPTROLLER GENERAL
OF THE UNITED STATES,
Washington, March 26, 1956.

Hon. CLARENCE CANNON,
Chairman, Committee on Appropriations, House of Representatives.

DEAR MR. CHAIRMAN: Enclosed for your information in connection with pending bill H. R. 10004 is a copy of our letter of today to Hon. JOHN TABER concerning the use by the Tennessee Valley Authority of power proceeds for capital expenditures for power facilities. Attention is particularly called to our recommendation that the present law be amended to clearly state the intent of Congress with respect to the use of power proceeds for such purposes.

Sincerely yours,

JOSEPH CAMPBELL,
Comptroller General of the United States.

COMPTROLLER GENERAL
OF THE UNITED STATES,
Washington, March 26, 1956.

Hon. JOHN TABER,
Committee on Appropriations, House of Representatives.

DEAR MR. TABER: Reference is made to your letter of March 21, 1956, enclosing a copy of the reports of the Appropriations Committee in connection with H. R. 10004, and directing our attention to the language concerning the Tennessee Valley Authority in both the majority and minority reports. You also request specific information pertaining to TVA's commitments of funds for power projects or parts of projects, the amounts of TVA's revenues in recent years, and the portion of such revenues that resulted from the sale of electricity to the United States Government.

A considerable portion of the language to which you directed our attention, as well as much of the record of the TVA hearings held March 1, 1956, before the Subcommittee on Public Works Appropriations, involves the basic questions of whether TVA has the statutory authority to use its power revenues to install additional generating units at existing powerplants without specific and prior approval of the Congress. The part of the law in question is the following language contained in title II of the Government Corporations Appropriation Act, 1948:

"None of the power revenues of the Tennessee Valley Authority shall be used for the construction of new power-producing projects (except for replacement purposes) unless and until approved by act of Congress" (61 Stat. 577).

This letter is not addressed to the question of TVA's statutory authority, which has been the subject of considerable discussion and disagreement, except to recommend that the present law be amended to clearly state the intent of the Congress with respect to its control over TVA's capital expenditures for power facilities. We believe such legislation is necessary at this time because, in our opinion, (1) the present law is not clear in this respect, (2) there has been a substantial change in the nature of TVA's capital expenditures for power facilities between 1948 and 1955, and (3) the present law, as currently applied, does not give the Congress effective control over TVA's expenditures of public funds for power facilities. It is our view that the Congress can most effectively control expenditures of this character through appropriations; however, if the Congress wishes TVA to use its power revenues, or funds obtained from other sources, to construct or acquire power facilities, it should require TVA to obtain specific and prior authorization from the Congress for such facilities.

There follows the specific information that you requested, as well as some comments on the significant change in the nature of TVA's power facilities between 1948 and 1955.

1. TVA's budget program for fiscal year 1957 was transmitted to the Bureau of the Budget on September 28, 1955, and provided for the use of TVA corporate income to start the installation of 5 additional generating units at 3 existing steam plants. These generating units are: John Sevier (unit 4), Johnsonville (units 7 and 8), Gallatin (units 3 and 4).

Prior to the date of the budget transmittal, TVA had issued letters of intent covering the acquisition of major equipment for unit number 4 at the John Sevier steam plant. These letters of intent provide for cancellation only upon payment of stipulated costs which are currently accruing against TVA. On September 22 1955, the TVA Board of Directors, by a 2 to 1 vote, approved the awarding of these letters of intent based on the advice of the TVA General Counsel that such action was authorized by law.

The Bureau of the Budget did not approve TVA's use of corporate funds to start these five units; however, the Bureau did make the following provision in the President's Budget, dated January 16, 1956, for TVA expansion:

John Sevier (unit 4) (by supplemental appropriation for 1956 and by issuance of revenue bonds under proposed legislation).

Johnsonville (units 7 and 8) (by issuance of revenue bonds under proposed legislation).

On January 17, 1956, the TVA Board of Directors, by 2 affirmative votes (1 director abstaining), authorized the awarding of letters of intent covering the acquisition of major equipment for 6 additional generating units—units 3 and 4 at the Gallatin steam plant and units 7, 8, 9, and 10 at the Johnsonville steam plant.

The total cost of the equipment covered by the letters of intent that have been authorized for all seven units is approximately $30 million. Other pertinent information pertaining to these seven units is summarized.

Plant	Unit	Capacity (kw's)	Estimated cost
John Sevier	4	180,000	$28,000,000
Johnsonville	7 and 8	270,000	44,000,000
Do	9 and 10	270,000	39,000,000
Gallatin	3 and 4	450,000	67,000,000
Total		1,170,000	178,000,000

In effect, the TVA Board of Directors has authorized the initiation of a major expansion program which will add 1,170,000 kilowatts of installed capacity to its system and will cost an estimated $178 million. The expansion program has not been reviewed or approved by the Congress, and further, it includes four units which have not been approved by the Bureau of the Budget.

2. As noted above there has been a significant change in the nature of TVA's power facilities. Prior to 1948 TVA was essentially a hydroelectric power system and additional generating units were of the size of 10,000 kilowatts to 70,000 kilowatts each. Since 1948, however, TVA has added 7 large modern steam plants, and current additional generating units are of the size of from 112,500 kilowatts to 225,000 kilowatts each. The future addition of a number of steam-electric generating units of this size, or larger, represents a substantial increase in generating capacity. At June 30, 1948, the TVA power system was 17 percent steam-electric and 83 percent hydroelectric; after completion of generating units under construction at June 30, 1955, the TVA power system will be 63 percent steam-electric and 37 percent hydroelectric (these percentages, of course, do not include the 7 steam-electric units discussed above).

Further, a single steam-electric generating unit today is very large (the Gallatin units are 225,000 kilowatts each). A single steam-electric generating unit of 225,000 kilowatts is larger than most present-day hydroelectric powerplants or most steam-electric powerplants in 1948. In 1948 the TVA system had only 2 powerplants with an installed capacity as large as 225,000 kilowatts. As of June 30, 1955, excluding TVA's 7 modern steam plants, the TVA system consisted of 44 hydroelectric powerplants and 8 steam-electric powerplants; however, only 3 hydroelectric plants and 1 steam-electric plant have an installed

capacity of over 225,000 kilowatts. The average installed capacity of the 44 hydroelectric plants is 80,000 kilowatts and of the 8 smaller steam-electric plants is 55,000 kilowatts. It is significant to note that technical advancements are still being made rapidly in the size of generators, as shown in the March 15, 1956, issue of Public Utilities Fortnightly, which reports:

"The electric utilities now have five generators with nameplate ratings of 300,000 kilowatts or over on order; Consolidated Edison has ordered two 335,000-kilowatt units for installation in 1958–59."

At June 30, 1948, the TVA system had an installed capacity of 2,567,402 kilowatts and during fiscal year 1948 average gross generation was 65 percent of installed capacity. The seven additional units involving the letters of intent discussed above have an installed capacity of 1,170,000 kilowatts, and, being steam-electric units, are sometimes capable of an average gross generation of over 100 percent of installed capacity (during fiscal year 1955, Johnsonville, Shawnee, and Widows Creek all had an average gross generation of over 100 percent of installed capacity). Therefore, the present expansion program of 7 additional units, which has not been reviewed by the Congress, involves installed capacity equal to 45 percent of the entire TVA system at June 30, 1948.

3. It is clear that the language of the 1948 Appropriations Act quoted above prohibits TVA from building a new steam-electric plant at a new location without prior congressional approval; however, it should be realized that TVA has the potentiality for expansion at some of its existing steam plants. The largest potentiality is probably at its Gallatin steam plant which at present is a 2-unit plant with an installed capacity of 450,000 kilowatts, but which could be expanded to a 10-unit plant. The following information pertaining to the Gallatin plant is contained in TVA's annual report for fiscal year 1954 (p. 16):

"TVA gave special consideration to the design of the main control and instrument switchboard, since it could ultimately become the centralized control board for a 2,500,000-kilowatt station (the present 1,440,000 installed capacity planned at Kingston makes it the largest station in the world at present)."

4. The final point is a discussion of the financial significance of TVA's power revenues. The TVA system is the largest single integrated electrical system in the country, and it follows that its power revenues are substantial. In the last 5 years, during which period steam generation has become an important factor, there has been a tremendous expansion in TVA's power system, primarily to supply the power needs of the Atomic Energy Commission. The following tabulation summarizes this growth:

Year	System installed capacity June 30 (kilowatts)	Power revenues, fiscal year		
		Total	Federal agencies	All other
1951	3,181,000	$70,329,580	$8,162,812	$62,166,768
1952	3,859,910	95,004,390	25,230,407	69,773,983
1953	5,102,985	104,877,869	31,505,622	73,372,247
1954	6,075,685	133,947,808	54,368,480	79,579,328
1955	7,809,985	188,162,989	102,962,859	85,200,130

In addition to the rapid growth in TVA's power revenues, as shown above, TVA estimates that its power revenues will continue to increase and that in fiscal year 1957 they will be $231,550,000.

It is significant to note the increase in TVA power revenues that has resulted from the sale of electricity to Government agencies ($8,162,812 in 1951 and $102,962,859 in 1955). During fiscal year 1955 such revenues represented 55 percent of TVA's total power revenues.

Based on estimated figures in TVA's statement of source and disposition of power income appearing in TVA's budget program for 1957 submitted to the Congress, TVA's net power proceeds for fiscal years 1956 and 1957 will be approximately $100 million each year. Such amounts are available for the construction and acquisition of power assets and for the repayment of the Government's investment in the power program. The budget program contemplates that TVA will repay to the Government $59 million in 1956 and $75 million in 1957 out of power revenues; however, it should be realized that the actual amount that will be repaid to the Government will be determined by the TVA Board of Directors and will be the amount of money which in the judgment of the TVA Board will not be needed in the conduct of the TVA power operation. As of June 30, 1955, TVA was several years ahead of the minimum repayment schedule required by the law and was 1 year ahead of an average repayment schedule based on a 40-year amortization period.

A copy of this letter is being sent to Gen. Herbert D. Vogel, Chairman of the TVA Board of Directors.

Sincerely yours,

JOSEPH CAMPBELL,
Comptroller General, of the United States.

The Constitution Keeps America Free

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Thursday, March 29, 1956

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The United States Constitution—Why America Remains Free," written by Irving Leibowitz and published in the Indianapolis Times of November 20, 1955.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE UNITED STATES CONSTITUTION—WHY AMERICA REMAINS FREE

(By Irving Leibowitz)

The Star-Spangled Banner proudly proclaims that America is the land of the free and the home of the brave.

It is the land of the free because of a document that is taken for granted by most people—the Constitution.

It is the home of the brave because men have willingly fought and died to defend the principle of the Constitution—that this is a nation of laws, not of men.

What makes the Constitution so sacred?

Perhaps the best way to answer this is to compare this Nation with others.

Even today, in many countries of the world, the people cannot worship as they please, they cannot speak against the regime in power, they cannot learn the faults of government because the press is powerless or restricted, they cannot meet with their friends and neighbors, they cannot appeal to the Government for help.

We, in America, are guaranteed certain rights by the Constitution. Among them are:

The right to worship as we choose, the right to talk and exchange ideas with our neighbors, the right to have and read free newspapers that expose graft and fraud in government, the right to hold public meetings with friends, neighbors, and business associates, the right to petition and urge our Government to better our way of life.

Wherever dictators have flourished—in Italy, in Germany, in Russia, in Argentina—the very first steps taken to insure their own absolute power was to crush or control independent newspapers, put an end to public meetings, and restrict freedom of speech and religion.

In our country, your home—whether it is a room or a mansion—is sacred.

A policeman may not enter your home and search it without a proper search warrant signed by a judge. And even the Government cannot, in time of peace, quarter troops in your home without your permission.

Before you can be convicted of a crime in America, you must be found guilty in a court of law. Not even a legislature or any other public body can inflict punishment without a trial.

In many foreign countries, dictators and tyrants have silenced opposition by ruling that people of a certain class or religion or color cannot hold property, cannot sue or testify in court and cannot claim any legal protection or rights.

There are, in the United States no privileged people before the law. In some countries, one must be born a lady or a gentleman. In the United States, anyone who chooses may be a lady or gentleman.

We do not have, as they do in some countries, the infamous midnight knock at the door and secret arrest by secret police. Nor do we have secret trials.

We have the privilege of the grand jury, where our own neighbors may review the case against us; we have the privilege to be confronted by our accusers; we have the right to be represented by a competent lawyer even if we can't afford one.

In America, a politician or a policeman cannot keep in prison his religious, political, financial, and personal enemies.

Those who have arrested any man must convince a judge there is reasonable grounds to believe the prisoner has committed a crime—or the man goes free.

Every prisoner must be told, in America, why he is in jail. We cannot languish in jail. We are guaranteed a speedy—and public—trial by jury.

We cannot be tried twice—or persecuted and harassed—for the same crime once we have been found innocent.

We cannot be compelled to testify against ourselves; we cannot be punished more severely than the seriousness of the crime; we have a right to trial by jury even in civil cases so that even a corrupt judge couldn't ruin us financially.

In short, we have equal protection before the law.

We cannot be held in slavery—we must be paid a fair price if the Government takes our property—we are not forbidden from holding public office because of our religion, whatever it may be.

Unlike many countries, we have the right to vote and select the men and women we want to represent us in government.

And our representatives make the laws we live by.

If the Supreme Court decides that any law is contrary to the principles of the Constitution, the law is dead.

This is a part of the system of checks and balances set up by the Constitution.

We have the Supreme Court, the Congress, and the President, each with limited powers checking on each other, which is the way it was designed to protect the people.

For example, the President can be impeached by the House of Representatives with the Senate acting as jury. Laws can be passed over the President's veto if approved by two-thirds of Congress. Treatymaking is limited by the Senate.

On the other hand, the President appoints—but only with Senate approval—members of the Supreme Court, which has the power to nullify any law which it deems unconstitutional.

In many foreign countries it has been demonstrated that when governmental powers are unlimited, freedom disappears. Ours is a government of limited powers that guarantees certain rights to all the people.

In South America, Europe, and Asia, men still fight and die to change their governments. In the United States, we have change without revolution. This is because the Constitution allows amendments by peaceful, deliberate, and organized methods.

Enactment of Poultry Inspection Legislation Imperative

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES

Thursday, March 29, 1956

Mr. MORSE. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD my statement entitled "Enactment of Poultry Inspection Legislation Imperative."

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR MORSE

The lack of legislation for the mandatory inspection of poultry has in the last few weeks caused bitter consequences in Oregon. Psittacosis or parrot fever, a pneumonia-like illness, has broken out among turkey flocks in the Portland area and has spread to humans.

So far, 2 persons are dead, 24 hospitalized, and 38 ill. The toll may yet be higher. Economic dislocations have resulted in the west coast poultry industry with Washington State clamping a tight embargo on Oregon turkeys and turkey eggs. Consumers, although not necessarily endangered, have probably been sold birds which died of the disease. And the Oregon poultry industry has suffered a severe public relations setback.

These tragic consequences to life and property can be minimized, and perhaps even prevented, by the enactment of poultry inspection legislation. Such legislation is now before the Senate in the form of S. 3176, of which I am a co-author. The Oregon outbreak is a case history in the need for such legislation.

Poultry suffers from some 26 diseases which are transmissible to man. Some of the illnesses are of only academic interest; they are spread so rarely to humans. Others, like psittacosis, cause major epidemics. Texas poultry workers have been the target of several of these outbreaks between 1948 and 1954. The last, in the summer of 1954, hit at least 200 persons with either 1 or 2 fatalities occurring. Outbreaks have also taken place in New Jersey, Nebraska, Virginia, and Iowa.

In February and March the disease came to Oregon in full force. Two turkey breeding flocks, with a total of 10,000 fowls, contracted the illness. These flocks were on farms near Portland on the Columbia River, according to the Portland Oregonian.

The disease soon spread from the turkeys to farm workers. This, by the way, is the first time health officials have found farm workers to have contracted psittacosis from poultry. In previous outbreaks, the United States Public Health Service reports that only poultry processing workers were affected.

But in Oregon several farmworkers became ill. One died. Although health authorities cannot be certain the death was completely due to psittacosis, they believe the disease was at least a contributing factor.

The diseased poultry was sent to a rendering plant and three processing plants in the Portland area. It spread havoc there. Another man who had been handling the diseased birds died. Other employees became ill with many requiring hospitalization.

The toll now stands at 64. It may actually be higher. Influenza has been prevalent in the Portland area and additional psittacosis cases may have been misdiagnosed for it. The Public Health Service is still sending blood samples from suspect cases to the Communicable Disease Center in Atlanta, Ga. to determine whether these persons are suffering from the poultry disease.

Psittacosis is a very painful illness, according to medical authorities. I should like to read, Mr. President, a short excerpt of the clinical findings in the Texas outbreaks, as reported in the book, Psittacosis, edited by F. R. Beaudette. It will give the members of this chamber an idea of the human suffering caused by the disease:

"The onset usually was characterized by fever, anorexia, chilly sensations, severe headache, and nausea or vomiting. Unless prompt and vigorous antibiotic treatment was instituted, the disease was slowly progressive and after a few days most patients felt much worse. At the height of the illness the most common complaints were feverishness, headache, cough, weakness, nausea, and loss of appetite. Several patients complained of chills, drenching sweat, and pain or soreness in the chest. Abnormal findings on physical examination usually were negligible at the time of hospitalization, even though the patients were quite toxic, usually with high fever. During the height of illness the patients frequently were delirious or disoriented. The most seriously ill became lethargic or stuperous; this frequently was a cause for comment * * *

"The duration of illness varied from a few days to several weeks. More than half of the patients were ill 2 or 3 weeks. Several patients had relapses; relapses occurred both in treated and untreated cases. Those more seriously ill convalesced slowly, but, excepting the fatal cases, recovery generally was complete and uneventful except for prolonged weakness."

But what about the consumer? So far, he has not been endangered by psittacosis. In fact, no consumer has been reported hurt so far in any American outbreak of this disease. Public health groups emphasize the "so far" however, since they recall that until the Oregon epidemic no farm worker had ever been reported hit by the disease either.

The Portland situation does demonstrate how dead, diseased birds are slaughtered for marketing to consumers just like live healthy ones. In one plant, health authorities found 49 fowls which had previously died of psittacosis were, nevertheless, being processed. Even if psittacosis is definitely found to be nontransmissible to man after the fowl has been killed or has died, I believe the consumer should be protected from unwittingly buying such diseased poultry. There is no reason why he should not be assured of a healthy bird when he pays his hard-earned money.

The psittacosis outbreak has not only caused human suffering, it has also created havoc and fear in agricultural commerce on the west coast. The Washington State Department of Agriculture has clamped a strict embargo agains turkeys and turkey eggs coming from Oregon. Its officials say this bar will be maintained until they are convinced the psittacosis outbreak has been localized.

The embargo is causing considerable hardship to Oregon turkey growers, according to the Oregon Journal. The State is one of the Nation's largest producers of turkeys and turkey eggs and the hatcheries ordinarily sell 60 percent of their products to other States, Washington, Colorado, and Utah usually are the biggest buyers, but now the Washington market has been temporarily shut off.

In addition, the Oregon poultry industry has suffered a serious public relations setback. Needless to say, occurrences such as these, including the dressing of poultry which has previously died of disease, lowers the confidence of the public in poultry. Sales necessarily suffer.

So what is being done about the outbreak? At a conference in San Francisco on March 20, called by the United States Department of Agriculture, it was decided that the fowls be fed antibiotic drugs to wipe out psittacosis among them. A segregation program for diseased or suspect birds was also ordered.

These steps are good as far as they go. But further action must be taken and it is up to us, in Congress, as well as State legislators, to take them.

We, here, must enact a mandatory poultry inspection law, as provided by S. 3176. The before and after slaughter inspection provision of the bill would virtually wipe out the industrial health hazard now posed to poultry workers. We would be able to bring to a minimum, and perhaps completely prevent, deaths and illness, from psittacosis, as are now taking place in Oregon.

The inspection would assure the consumer a clean and healthy product in poultry moving in interstate commerce. He could have complete confidence in the healthfulness and cleanliness of the chickens, the turkeys, and ducks he buys.

The producer and the processor would benefit from a more stable market. And with large outbreaks gone, the embargoes and the resultant economic dislocations would become a thing of the past.

The Oregon psittacosis outbreak demonstrates the imperativeness that we enact S. 3176 as soon as possible. We cannot afford to let human life suffer, as in the Portland area. We cannot afford to let an industry decline. We have a means of dealing with the problem. Let us use it.

District of Columbia Mass Transportation Problems

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES

Thursday, March 29, 1956

Mr. CASE of New Jersey. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter addressed to the distinguished senior Senator from West Virginia [Mr. NEELY], and signed by the Senator from Michigan [Mr. MCNAMARA], the Senator from Oregon [Mr. MORSE], and myself, relative to the problem of mass transportation in the District of Columbia.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

MARCH 28, 1956.

Hon. MATTHEW M. NEELY,
Chairman, Senate Committee on the District of Columbia,
United States Senate,
Washington, D. C.

DEAR MR. CHAIRMAN: The Subcommittee on Public Health, Education, Welfare, and Safety, of the Senate Committee on the District of Columbia, met for more than 2 hours this morning for consideration of the District of Columbia mass transportation problems. We have come to the conclusion that some form of public authority for the operation of a mass transportation system in the District, at least on an interim basis, is necessary if the people of the area are to have adequate transportation services at reasonable cost. Therefore, it is our recommendation that within the next 15 days, the professional staff of the Senate District Committee be instructed to study and prepare whatever revisions of S. 3073, which is the present transit authority bill, may be necessary to accomplish the following legislative objectives:

1. Establish a public transit authority on a 1- to 3-year interim basis with sufficient flexibility to adapt its transit program to the recommendations of the mass transit study now underway. It should be noted that Congress has already authorized the expenditure of approximately $400,000 for a mass transit study. It appears to your subcommittee that any transit program which is to be adopted by the Congress this year should take into account the need for maintaining whatever flexible powers and jurisdiction that may be necessary to adapt itself to any sound findings and recommendations submitted by the mass transit study.

2. Your subcommittee believes that another essential feature of interim public transit authority should be one which empowers the District Commissioners not only to operate a public transit system for the interim period of 1 to 3 years, but also empowers the Commissioners to transfer the transit system into a private ownership system if during the interim period a sound proposal for private ownership is submitted to the District Commissioners and they find that the proposal would result in providing the people of the District of Columbia with a reliable and efficient transportation system under private ownership.

The members of your subcommittee continue to be of the opinion that private ownership operation of the transportation system is the most desirable if a satisfactory offer from some qualified, competent, and adequately financed company could be obtained. However, your subcommittee is also satisfied that up to this date no such proposal from private interests has been forthcoming and this lack of interest by private capital necessitates the Congress proceeding with all deliberate speed to pass the necessary legislation for a public operation of the transportation system for at least an interim period of 1 to 3 years. It may be that with such extension of time private interests will come forward with an acceptable offer, although your committee feels that it is only fair and proper to point out that it is not too encouraged or optimistic over that prospect. The fact is, and it is an inescapable one, that mass transit systems throughout the country are not an attractive investment possibility and in most instances are either losing money or paying very low returns. Such is even true in many localities where private transit companies are receiving what amounts in fact to various types of subsidies in tax exemptions and public services that are paid for by the taxpayer.

The trend in our country for some years in the field of public transportation has been in some form of public ownership and operation. Even though the members of your committee prefer private operation, we cannot ignore the economic realities of the situation and we feel that the Congress has the obligation of facing up to the transportation needs of the citizens of the District of Columbia. The Federal Government has a vital interest in providing the thousands of Federal employees who work in the District with sufficient and adequate public transportation.

3. It is our recommendation that any interim public transportation authority that is authorized in this session of Congress by legislation should place the authority and responsibility for operating the transportation system squarely in the hands of the District Commissioners, including the authority to give transit priority necessary to insure efficient operation of the transportation system in respect to routing, traffic control, safety, reservation of street lanes, and the many other managerial details that go along with providing the transit riders with satisfactory service.

We wish to call the attention of our colleagues on the Senate District Committee that it is only to the extent that we make a public transportation service attractive to the thousands of the daily potential public transit riders who are now operating private cars that there is any hope of maintaining a self-sustaining and profitable public transportation system.

4. In view of the national trend toward public operation of mass transportation systems in many of our cities, we would point out to the full Committee on the District of Columbia that a subsidy program which in effect seeks to guarantee a private company against financial losses is too high a price to pay for managerial services of such company. A public authority at least has the advantage of complete control over the service rendered the public and is not solely motivated by excessive quick profits.

5. We wish to stress the fact that the time schedule for the handling of the transportation emergency that confronts the District of Columbia should not be ignored by the Congress or by interested groups in the District. We urge that the business interests of the District face the fact that they have a great deal to lose if a satisfactory transportation system is not worked out in the immediate future, so that there will be adequate transportation services available on August 15. Therefore, we hope that the business, professional, and civic interests of the District of Columbia will give favorable consideration to the proposal which we have outlined in this letter and which will be submitted to the full Committee on the District of Columbia in detail as soon as the professional staff of the committee completes its study and prepares the legislation.

Sincerely yours,

SUBCOMMITTEE ON PUBLIC HEALTH, EDUCATION, WELFARE, AND SAFETY.
PAT MCNAMARA, *Chairman.*
WAYNE MORSE, *Member.*
CLIFFORD P. CASE, *Member.*

Perversive and Capricious Use of Fifth Amendment by Communists

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Thursday, March 29, 1956

Mr. MUNDT. Mr. President, the New York Herald Tribune for Wednesday, March 28, 1956, contained a very interesting and informative article on the need for and desirability of limiting the use of the fifth amendment to the Constitution to the reasons for which it was designed, and to take essential steps to stop its perversion and its capricious use by Communists who refuse to testify before authorized bodies of the Government.

I ask unanimous consent that the editorial may be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FIFTH-AMENDMENT SILENCE

By upholding the Immunity Act of 1954, the Supreme Court has given to the Government the right to force any witness in a national security case to give testimony in exchange for the guaranty of being safe from prosecution for self-incriminatory statements. Thus a powerful weapon is provided for delving into the Communist conspiracy, one that should be of great assistance to the Department of Justice in encouraging otherwise willing individuals to come forward and provide information.

Now it has long been a pet argument of many that the fifth amendment to the Constitution, which states that "no person * * * shall be compelled in any criminal case to be a witness against himself," provides a shield for silence under any and all circumstances. This is simply not so. The privilege is broad, but the witness cannot invoke it at his own pleasure to protect others from punishment or himself from incidental consequences. The question is purely one of being protected from giving testimony against self.

What Justice Frankfurter emphasizes in the Court's 7-to-2 majority opinion is that the privilege does not apply when the peril of prosecution is removed. As he says, the sole concern is "with the danger to a witness forced to give testimony leading to the infliction of 'penalties affixed to the criminal acts.'" But the grant of immunity, provided by Congress in its concern to safeguard the country's security, removes this danger to the individual. And logically enough, "once the reason for the privilege ceases, the privilege ceases."

The dissenting Justice Douglas, however, contends that the fifth amendment gives an impenetrable "right of silence." He argues that "the Government brings infamy on the head of the witness when it compels disclosure," and that this is beyond the reach of Congress. We disagree completely. The language of the amendment is precise; it does not say that the witness can remain silent where no self-incrimination and risk of punishment are involved.

The public, after all, has a right to insist on testimony, and particularly where the national security is involved. The fifth amendment, it should be understood, was never meant to be abused as a convenient refuge for Communist conspirators and their fuzzy-minded friends.

Proposed Electoral System Reform

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Thursday, March 29, 1956

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in

the Appendix of the RECORD an editorial entitled "Reforming the Reform" and published in the Washington Post today, March 29, 1956. The editorial is the last in a series of illuminating editorial analyses by this great paper, underlining the fatal weaknesses in the proposed amendments to our constitutional method of electing the President of the United States.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

REFORMING THE REFORM

The Senate took the only reasonable course in sending back to its Judiciary Committee the complicated problem of reforming the presidential electoral system. The 48-to-37 vote for the 2-pronged Daniel resolution indicated a substantial sentiment in favor of improving the present outmoded electoral system, but it fell far short of the two-thirds approval required for constitutional amendments. Last-minute patchwork on the Daniel resolution had made it a mish-mash. Only careful reconsideration by the committee can reshape the proposed amendment for attention by some future Congress. The emphatic defeat of the amendments calling for direct election of the President demonstrates once more the futility of promoting changes of that sort—changes that would upset the present weight of the States in the presidential contests.

The week of debate on the electoral system served one useful purpose. Senator MUNDT's attempt to revive the choice of presidential electors by congressional districts focused attention upon the gross inequality of such districts. In Texas a Dallas County district with a population of 615,000 has the same representation in Congress as an adjacent district with 228,000. In Los Angeles, 1 congressional district has 481,000 inhabitants and another 227,000. Similar inequality in legislative representation may be found in many States. The reformers could well divert some of their zeal into correction of these political injustices, the responsibility for which centers in the State legislatures.

Peace in Our Time

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 29, 1956

Mr. ABBITT. Mr. Speaker, the cause of peace is today one of the major concerns of a great many of our people. Almost every day I receive letters from constituents expressing their concern for the welfare of our country and its place in the world.

I have received a letter from Mr. J. S. Webb, of Rushmere, Va., which is typical of this feeling. Under unanimous consent, I include this letter with my remarks:

DEAR CONGRESSMAN ABBITT: When will the public wake up to the facts about peace? Not as long as we have uninformed or misguided leaders like the President going to the Geneva Conference. Is it because he is uninformed, or because he refuses to face the facts?

Either way it will avail nothing to attain peace for this war-torn world. For we can never attain peace until we discover first the cause of war. We are great on discovering the cause of disease and epidemics but seem to be incapable of discovering the cause of the worst of all epidemics, that disease called war.

Now then, no doctor would attempt a remedy for a disease until he first found the cause. So why kid ourselves and the public with the idea that we can devise a cure for war without finding the cause. However, the road to peace is very simple. All we have to do is to stop maintaining imperialism throughout the world and peace will follow just as sure as daylight follows night. Failing that we shall live to see the U. N. go down the same way the old League of Nations went when the next world war is started. For that too can never be a true instrument for peace until imperialism is abolished.

Yours for peace in our time,

J. S. WEBB.

Constitutional Election Reform

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Thursday, March 29, 1956

Mr. DOUGLAS. Mr. President, on the day the Senate voted on the proposed constitutional amendments pertaining to the election of the President, Walter Lippmann's column entitled "Invitation to Confusion," sharply emphasized the chaotic situation that would be created by the passage of the proposed amendment. Since this matter is to be considered further in committee, I ask unanimous consent to have printed in the Appendix of the RECORD, for the information of Members, Mr. Lippmann's column, which was published in the Washington Post of March 27, 1956.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TODAY AND TOMORROW
(By Walter Lippmann)
INVITATION TO CONFUSION

There is at present strong support in Congress for a variety of constitutional reforms, all of which have to do with the Presidency. The Senate will be voting this week on several amendments dealing with the electoral college and how the popular vote for President should be counted. There is in the background the revised version of the old Bricker amendment to limit the treaty-making powers of the National Government. And there are in the works a number of bills to clear up the unsettled questions of what happens if the President is disabled.

Of these 3 subjects, it may fairly be said that only on the last 1 is it both desirable and urgent to act now. The Bricker amendment is not only not needed, but might well prove extremely embarrassing to the President. As for the reform of the electoral-college system, the fact is that though a theoretical case can be made for reform, there is no agreement among the reformers on what the reform should be.

The leading proposal now before the Senate, the so-called Daniel-Mundt amendment, proves on its face that Congress is not ready to deal with the question. This amendment would not institute a new system of voting for President. It only sounds as if it might if one does not look at it carefully. All that it really does is to invite each of the 48 State legislatures to do what those legislatures have now, and have always had, the right and power to do. The Daniel-Mundt amendment is not in fact what it purports to be—a new and better system of electing the President.

It offers each State legislature a choice of systems. Senator DANIEL, in section 2, offers each State legislature the right—which it already possesses—to order the electoral vote divided among the three leading candidates in proportion to the popular vote. Senator MUNDT, in section 3, offers each State legislature the right—which it has always had, and has in fact at times used—to let the electors be chosen like Senators and Representatives—two at large and the rest by congressional districts. Senator MUNDT also offers the State legislatures—though nothing is said about it—the right to keep the general ticket system, provided they also elect their Representatives at large.

So far as I can make out, as to how the popular vote shall be counted, the one and only thing the amendment changes is to prohibit a State from electing its representatives by districts and its electors on a general ticket. If the State wanted to have the general ticket system for electors it would—like New Mexico and North Dakota today—have to elect its Congressmen on a general ticket. The temptation to do just that would be strong, especially in the smaller States, because with all the electoral votes counted as a unit, the State has a greater impact on the choice of a President. The best proof of this is that for more than a century all the States have voluntarily adhered to the general ticket system. The reason they have adhered to it is that this system gives them their greatest political weight.

Whatever may be said in favor of the Daniel reform, the Mundt reform, or any of the other proposed reforms, nothing can be said in favor of a constitutional amendment to invite each State legislature to consider before each presidential election how it will have the popular vote in its State counted. That, however, is what the Daniel-Mundt amendment really does. It decides nothing. It merely invites and incites the majority party in each State legislature to tinker with the system in order to help shape the result of the election.

Thus the system of electing Presidents, which is now stable and uniform by general consent throughout the Nation, would become variable and unsettled. A close national election could come to depend on whether a particular State legislature had for that election picked one system rather than another.

Congress is quite evidently not ready to propose a reform of the electoral system. For what is now before it in the Daniel-Mundt amendment is in fact an elaborate pretense. It covers what is simply a passing of the buck to the 48 State legislatures.

Save Our Vanishing Species

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, March 29, 1956

Mr. NEUBERGER. Mr. President, on March 20, 1956, the Oregon Journal carried an excellent editorial, entitled "Save Our Vanishing Species," which discusses the great loss mankind would suffer if certain wildlife species were permitted to become wholly extinct.

The occasion for the editorial was National Wildlife Week—an annual occasion which reminds us that unless we make affirmative efforts to preserve them, many historic American animals, fish, and birds may forever fall victims to the spread of human civilization across the continent. Among these vanishing species the Journal mentions the grizzly bear, the prairie chicken, the whooping crane, and the grayling. The sea otter and the bighorn mountain sheep are already extinct in Oregon, although there is still a possibility of restoring them from other areas, as elk and beaver have been restored in Oregon, if enough areas of their natural habitat can be maintained in protected wildlife areas and elsewhere.

As the Journal says:

For some of the vanishing wildlife the preservation of native habitat and wilderness in national wildlife refuges is essential to survival, but for the host of our wild creatures a basic love and wise use of our soils, forests, and waters will see both wildlife and mankind endure.

Mr. President, I ask unanimous consent to have printed in the RECORD this editorial from the Oregon Journal.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Oregon Journal of March 20, 1956]

SAVE OUR VANISHING SPECIES

There is a challenge for the intelligence and heart of man in the 1956 National Wildlife Week goal to save vanishing species such as the grizzly bear, prairie chicken, whooping crane, grayling, and condor.

Some of the now extinct wildlife of North America such as the Eskimo curlew and passenger pigeon were hunted into extinction for both market sale and sport. That was in a frontier era when nature's treasure trove in this land seemed boundless.

However, it is living space that is the major need of endangered wildlife. Spiraling human populations and demands upon the land constantly change and diminish the natural habitat which wildlife requires.

If soil erosion and pollution that silt and fouled the lakes and streams aren't controlled, the trout, grayling, salmon, and other native fishes will vanish despite protective regulations.

Living are fewer than 800 grizzly bear, largest of our carnivores which we associate closely with the folklore of our Western frontiersman. To save them will require the maintenance of some of the true wilderness remaining in the northern Rockies.

Big game herds will thrive or vanish depending not so much on how the hunting regulations are set each season but on how wisely their natural ranges are managed.

For some of the vanishing wildlife the preservation of native habitat and wilderness in national wildlife refuges is essential to survival, but for the host of our wild creatures a basic love and wise use of our soils, forests and waters will see both wildlife and mankind endure.

If we cannot figure how to save these vanishing species with all of man's technology and superiority over animals, then how can be hope to save mankind?

Every State has its endangered wildlife, Oregon included. Some species like the sea otter, Rocky Mountain sheep of the Wallowas and grizzly bear are extinct in Oregon.

No other animal played a greater role in the conquest and history of this coastal area than the sea otter.

During the latter part of the 18th century, the great maritime powers sent able captains and lusty crews to engage in and, if possible, monopolize the incredible otter skin trade with the courts of old Cathay by claiming and establishing posts along the shores of western America.

Discovery of our Columbia River was the result of a sea otter hunting expedition by Captain Gray, who outfitted his brig *Columbia* for that purpose at Boston in 1787 and chanced into the river.

The kelp beds and reefy coastline from the Rogue River to Port Orford were the main home of Oregon's now vanished herds of sea otter.

Protected remnants in the Aleutians and off Point Lobos in California give hope that some day the sea otter can be trapped and transplanted again to its former habitat.

The grizzly—big brother to the Indian who recognized him as the master hunter, Old Ephriam to white hunters—is in his twilight.

He had to give way with settlement and there are no wild tracts in Oregon today large enough to contain his species. A final stand will be made in the forest service wilderness areas of western Montana and Yellowstone National Park.

Bighorn sheep were once abundant in eastern Oregon.

There is still a place for them in the Wallowas, Steens, and Hart Mountains. Restoration of the rimrock race of bighorn found in the more arid ranges has got off to a successful beginning with the transfer of a band from British Columbia to Hart Mountain National Wildlife Refuge by the Oregon Game Commission.

Old market hunting records show the sharp-tailed grouse from the native bunchgrass country of Wasco, Sherman, Gilliam, Morrow and Wheeler Counties was the most abundant of Oregon game birds next to the band-tailed pigeon. Today a bare remnant of this grouse is in Wallowa and Baker Counties.

That not all is gloom for vanishing species is evidenced in the restoration of elk and beaver in this State.

We accept wildlife as a very important part of our heritage.

To mourn the loss of those now vanishing will never bring them back. There is a task for the wildlife scientist and all the rest of us.

II. The Current Soviet Challenge

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1956

Mr. WILLIAMS of New Jersey. Mr. Speaker, delay and inaction by the Executive and the Congress in facing up to the full implications of the current Soviet threat will have serious repercussions for freedom in the long pull. Soviet aggression is nonmilitary and therefore less obvious. It now comes under the guise of economic, political, and psychological penetration of the uncommitted areas of the world. The Soviets may not achieve any startling victories before our November elections, but our failure to devise new means of meeting the threat as we await our elections could well be a blow to freedom whose repercussions will be decisive at some later date. Clearly, the Russians will not miss the opportunity of trying to take advantage of election year timidity.

We do not need to look far for evidence of the current Soviet challenge, but I would like to call the attention of the Congress to an article by Gordon Graham, special correspondent of the Christian Science Monitor, pointing out the successes of Soviet leaders Bulganin and Khrushchev in their trip to India early this year. A news analysis of that trip by Eric Sevareid, which appeared in the Washington Post and Times Herald, further underscores the need for imaginative new thinking on this subject.

In an effort to contribute in some way to filling this need, I have introduced House Concurrent Resolution 216, which proposes a share-the-cost program with our Atlantic allies for supplying development capital to assist have-not nations. Such a program, it seems to me, would not only lessen the burden on American taxpayers but could serve as a focal point of American leadership in an area in which several of our European allies have recently urged action.

The articles follow:

[From the Christian Science Monitor of December 10, 1955]

WINDFALL FOR SOVIETS: INDIAN VISIT PAYS OFF

(By Gordon Graham)

BOMBAY.—As the Soviet Union's traveling salesmen Nikolai A. Bulganin and Nikita S. Khrushchev return to India from Burma to continue their grand Asian tour, they enter a political atmosphere markedly different from that which greeted them when they landed at Delhi Airport on November 18.

They dropped then into a land organized for welcome down to the last hurrah. Indian Prime Minister Jawaharla Nehru had chosen for their tour slogan "Indians and Russians are brothers." Millions waited uncritically to greet them. All Messrs. Bulganin and Khrushchev had to do to achieve their object of drawing India closer to the Soviet orbit was to sit genially on the crest of the wave.

But Mr. Khrushchev, First Secretary of the Soviet Communist Party with the apparently benign acquiescence of Premier Bulganin decided to do some paddling on his own. Maybe he mistook Indian hospitality (a phenomenon experienced by every visitor to India) for unanimity with Soviet ways and aims.

Whatever his calculation, he launched into a series of attacks both extemporized and rehearsed on the Western democracies, interlarded with glorification of Communist achievements, which set a gradual tide of criticism against the huge wave of popularity.

Western observers began to wish Mr. Khrushchev was staying longer than his scheduled 3 weeks in India, so that the Indians could get a good look at the Soviet mentality. Indian observers began to recall visits of United States Vice President RICHARD M. NIXON and British Prime Minister Sir Anthony Eden, neither of whom gave vent to any anti-Communist statements on Indian soil.

Criticism was mainly among Indian intellectuals, right wing congressmen, and political commentators—a group big enough to justify the hope that the influence of the Soviet visit on Indian policies could be neutralized. Educators, too, criticized the marshaling of children to cheer worshipfully in such a way as to leave a lasting impression on the children's thinking.

But when the Soviet visitors stepped over to Burma to greet Burmese Premier U Nu and his people, events took a turn which made Mr. Khrushchev look cleverer than he seemed. Amidst all his politely disbelieved rantings about the cold war, there had lain numerous statements which were seen here as obvious attempts to rend the delicate fabric of Indian-United States political understanding.

One such was his statement of November 30 in Calcutta: "There are some countries which, like insects, stick to the human body and are sucking its blood. I have in mind Portugal, the country which does not want to leave Goa, the rightful territory of India, to its destiny. I am convinced that Goa will be liberated from foreign domination and will enter the great Republic of India as its integral part."

This sentiment was an exact reproduction of what almost all Indians feel—rightly or wrongly—and anyone expressing it is taking the shortest route to the Indian heart which was reborn at the beginning of the post-colonial era.

The shock felt by Indians when United States Secretary of State John Foster Dulles, in a joint statement with Portugal's Foreign Minister Paulo Cunha, referred to Mr. Khrushchev's statements as "allegations concerning Portuguese provinces in the Far East" can scarcely be overestimated. The sober opinion of all Indian and foreign observers here is that Mr. Dulles played into Soviet hands.

INDIAN ACCUSATION

For years India has accused the United States of neutrality on what Indians regard as a major Asian issue—foreign rule of Asian nations. United States Ambassador to India John Sherman Cooper only recently reaffirmed this when he said on September 26 that the United States took no position on the Goa dispute. He said on another occasion it was a matter for Portugal and India to settle and all the United States wanted to see was a peaceful settlement.

Now the United States announces officially, according to the Indian sense of things, that an assertion of Portugal's political immorality is an "allegation." It appears that in a single adroit stroke the Soviets have attained their long-sought goal to identify communism with anti-colonialism and cololnialism with democracy.

This is the deduction made by Indians from Mr. Dulles' statement. which cannot be confined now to the Goa issue alone, "Now we know who are our friends" sums up the Indian reaction.

Mr. Dulles' elucidation of December 6, which made the point that the Dulles-Cunha statement was directed only against hatred and prejudice in the Goa dispute has been widely published here, but does not alter the fact that Mr. Dulles has brought Mr. Khrushchev back to a situation in India retrieved from his own earlier brashness.

Even Indians who see both sides of the picture say that Mr. Khrushchev has outwitted the United States Secretary of State. Certainly the Soviet leaders' visit couldn't have come at a worse time for Indian-American relations.

The top-level outcome of the Soviet visit is now more difficult to estimate. There is no doubt that with the great mass of Indian people, the visit has been and will remain a great propaganda victory, a fact which does not concern Indian leaders too much, since the masses will cheer whom Mr. Nehru tells them to cheer.

Much will now depend on the details of the Soviet economic aid offer to India over which Indian and Soviet ministers have been working in Delhi for two weeks. The Indians, currently much taken up with the second 5-year plan shortcomings, are hoping for something rather solid.

LIMITED AID

But preliminary reports indicate the Soviets think only of expanded barter trade, loan of experts, training of Indians, free use of Soviet technical processes by India, and easy credit on capital equipment. Helpful though these measures might be, they will do little to make up for shortcomings which concern everyone from Finance Minister Chintaman D. Deshmuck downward.

This writer happened to stand in motionless and silent juxtaposition with the two Soviet leaders at a Bombay reception while a band played lengthy versions of Indian and Soviet anthems.

Caught in the arc lights the two dignitaries, who had both been feeling Bombay heat after wintry Delhi, reacted differently. Mr. Bulganin fidgeted and looked around, was obviously aware of his feet, while his companion froze into immobility such that even his eyelids failed to move.

This visual impression confirmed the general conclusion of Indians who, while they may not know whether to be pleased or displeased at Khruschev's uninhibited remarks, are sure of one thing—the Communist Party chief of the Soviet Union is a tough proposition from any angle.

[From the Washington Post and Times Herald of December 4, 1955]

CAUGHT NAPPING, AND STILL NAPPING—AT WAR WITHOUT A BATTLE PLAN

(By Eric Sevareid)

The Russian leaders continue to draw immense, cheering crowds in India, continue to make headlines throughout the Mideast as well as India with their promises about economic aid to those countries.

For reasons we won't go into here, they can make promises about loans, of far smaller amounts than we have already provided in outright grants, and produce an outpouring of excitement and gratitude that was never the American reward.

In any case, on the surface of things, the Russians seem to have the initiative, driving ahead with what many people believe is a serious, long-term cold war phase in the form of competitive coexistence; the very kind of cold war many Americans always said was the kind we would welcome and surely win.

But, having said this for years, the truth seems to be that Washington was neither prepared for battle on these terms, nor, now that the battle has opened, has it any agreed policy or scheme of action for fighting the battle. Washington reporters heard Secretary of State Dulles take mostly a negative line the other day, saying that the United States is not going to try to match every Soviet offer of aid to other countries, because, he said, that way the Russians could jockey us into ruinous expenditures.

That particular doom is not likely to happen to us, though it is obviously true that smaller countries could possibly play Russia and America against each other to their own excess benefit. But these are hypothetical worries; what worries some observers here, who went from Dulles' remarks to a luncheon talk by Foreign Aid Director Hollister, is that administration leaders haven't begun to agree on the meaning of the new Russian tactic, much less how to combat it.

The only effect of the torrent of alarming news from the Mideast and Asia on Hollister was to cause him to conclude that maybe foreign aid spending can't be reduced; and reduction, quite clearly, is his real heart's desire.

Quite clearly, he is not going to fight for a greater appropriation, however alarming the news; he is content to go along as before, keeping a small, uncommitted cash reserve on hand to put out any spot fires that may develop.

In that state of mind, the new foreign-aid budget will be decided; because that is the state of mind today and the budget book must be closed almost immediately; there simply isn't time for a change of course and there won't be a change, unless the President himself should toss a firecracker from the direction of Gettysburg, a very unlikely development.

The New York Times, pleading for big scale thinking and big scale action, says, "What is needed, on top of and even more importantly than strictly military aid, is a broadly conceived program of economic help and political leadership * * * boldness and resourcefulness, not fearfulness and rigidity."

It was pretty clear to those who listened to Hollister that nothing remotely like this is in the works, or even in the minds of the Federal leadership .

The atmosphere of drive and boldness and drama that surrounded foreign aid in the days of Hoffman, Harriman or Stassen has utterly vanished from Washington. Hollister in his speech wouldn't even define his own basic philosophy about America's role in fighting for the world's freedom and safety with the material resources of peace. In fact, he said he wasn't quite sure he had one.

Well, there is always the chance, of course, that our present uncalculated risk will work out and that the Russian drive will prove empty words and nothing more. If it doesn't work, then we're in for real trouble; we'll also look very foolish.

Communist Tactics

EXTENSION OF REMARKS

OF

HON. DON HAYWORTH

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1956

Mr. HAYWORTH. Mr. Speaker, at a time when many are being deceived by the current shifts in Communist tactics, in Asia and in Europe, I would like to call attention to the following excerpts from an article by Denis Healey, British Labor Party member of Parliament, in the March 19, 1956, issue of the New Leader:

There are no elections pending at present in Europe, so Dulles' optimism about the Khrushchev line has found no echo in government circles on this side of the Atlantic. But there is nonetheless a terrifying indifference to the challenge presented by the 20th Congress of the Soviet Communist Party. Some circles are even showing a dangerous innocence about the revival of popular-front tactics.

To any honest observer, the dominant feature of the Moscow Congress was an ebullient confidence which has few parallels in Soviet history. It is impossible to deny, moreover, that Khrushchev and his colleagues could point to genuine grounds for confidence. The Soviet state is both absolutely and relatively very much stronger than would have seemed possible a few years ago.

In the military sphere, Russia is developing a thermonuclear striking power which may soon wipe out the advantage America has had in this field since the war. Indeed, Russia may already have both the weapons and the aircraft to retaliate in kind on American cities if the West meets Soviet aggression by launching the Strategic Air Command against the sources of Soviet power. It is clear that Russia hopes to obtain immunity for aggression with conventional forces by holding American cities

hostage against atomic retaliation. The West now has bitter cause to regret its failure to establish a clear distinction between the tactical and strategic use of atomic weapons. But this battle is not yet lost. Marshal Georgi K. Zhukov's threat of massive retaliation may prove just as much a bluff as Dulles' did at Dien Bien Phu. Provided the West can demonstrate that tactical limitations are militarily practicable, Russia will have to agree that they are politically essential.

In the economic sphere, Soviet progress is more impressive still. Though western experts may argue about the precise rate of increase in Russian productivity, no one can deny that it is as high as any in the West, and much higher than most. Russia is now producing more steel and power than Britain and Germany combined. Her coal production has increased tenfold in the last 20 years. And all this increase is available to the state for purposes decided by the Communist leaders. Some observers fear competition in living standards. It is certainly likely that the Soviet example here will impress Asian countries which want to make rapid progress themselves. But in the short run Russia's booming economy will affect world affairs more directly by giving her leaders new instruments of diplomatic influence. For example, Russia can now afford to trade at a substantial loss for the sake of political benefits. Her recent heavy buying of Egyptian cotton and Asian rice are good examples. The West must be prepared for a large-scale Soviet commercial offensive all over the world—not least in areas like Latin America which have so far been neglected by Russia and the West alike.

No less impressive than Khrushchev's confidence in Russia's power as a state is his revival of militant Leninism as a crusading revolutionary faith. I have talked to many western leaders who have met Khrushchev in the last 12 months. They were all startled by the vigorous certainty with which he used Leninist dogma to explain or justify his views. His speech at the Congress shows how deeply his actions are determined by his doctrine. In a similar situation, Stalin would have played down the ideological theme for fear of disturbing the capitalist governments. Khrushchev did just the opposite. He reaffirmed the doctrine of conflict between the Socialist and capitalist camps with extreme force, and, where Stalin might have offered to disband the Cominform, Khrushchev devoted much time to defining the role which foreign Communist Parties should play in expanding the "Socialist" camp.

* * * * *

For over 20 years, one of the main obstacles to Communist success outside Russia was the rigid uniformity imposed on all foreign Communists by Stalin; and Stalin's prescription for foreign Communists often was determined by the temporary needs of some factional struggle he was pursuing inside the Soviet Union rather than the interests of world revolution. In abandoning the Stalinist type of control, Khrushchev is making world communism far more formidable. It is true that the decision was largely forced on him by the independent successes of the Chinese Communists, and by the Cominform fiasco in Yugoslavia. But the posthumous rehabilitation of the prewar Polish Communists and Hungary's Bela Kun shows that Khrushchev is not just interested in better relations with the two independent Communist states which exist at present. He is interested in reestablishing international communism as a revolutionary force allied to Soviet power but not wholly dependent on it.

What Khrushchev is saying in particular is that in many countries where capitalism is weak Communists may achieve power by exploiting the opportunities offered by parliamentary democracy, as they did in Czechoslovakia and Hungary after the war, though here Soviet power was always ready in the background to intervene at the crucial moment. Khrushchev's words are aimed mainly at the Communist parties of Asia, the Middle East, France, and Italy, where infiltration of state institutions is comparatively easy and political and economic conditions favor a new popular front.

The popular front is once more the order of the day, as always in periods when the Soviet Union is pursuing a policy of peaceful coexistence.

Fortunately, there is little danger that any of the European Socialist parties will succumb to these tactics, though Soviet leaders are courting them assiduously. Khrushchev and Bulganin may well seek talks with the Labor Party when they are in London, but they will have a cold reception. Only the Bevanite organ Tribune has shown the gullibility the Russians hope for.

Western intellectuals may well be surprised that Leninism should show such resilience in Russia even after the long Napoleonic interlude of Stalinism. But the reason emerges all too clearly from Khrushchev's speech in Moscow. However must he may have distorted or exaggerated the facts, Khrushchev was able to show that the non-Communist world has failed to solve its internal contradictions. It is verifying Lenin's predictions. In the face of the growing estrangement between Asia and the West, of France's agony in north Africa, Lenin's theory of imperialism takes on new life. NATO has failed to realize its early promise. The attachment of Germany and Japan to the West is under growing strain. The non-Communist countries show no sign whatever of achieving a unity remotely comparable to that of the Communist bloc. Against this global contrast between Communist solidarity and non-Communist disintegration, the sententious absurdity of many of Khrushchev's remarks matters little. What is unforgivable is that western leaders should have failed to take account of the new atmosphere of confidence in Russia—or should deliberately have misled their own peoples about its existence.

* * * * *

The challenge facing our generation is to prove that individual liberty is not incompatible with international order. In many ways it is one version of a struggle between freedom and authority that is as old as history. But the present age provides a terrible penalty for failure to meet the challenge, since the totalitarian alternative stands physically present to take advantage of every weakness in the democratic camp.

What the Western world needs more than anything at the present time is leadership—men who will tell the peoples of the world the truth about the global problem and direct their energies toward the creation of active unity among the nations which reject the Communist alternative. There is all too little sign of such leadership among those who guide our destinies at present.

Congressman Minshall's Opinion Poll

EXTENSION OF REMARKS

OF

HON. WILLIAM E. MINSHALL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1956

Mr. MINSHALL. Mr. Speaker, today I am releasing the final tabulation of an opinion poll conducted among the registered voters in Ohio's 23d Congressional District.

Questionnaires, prepared at my personal expense, were mailed to the home of every registered voter—Republican, Democrat, and Independent—in the district, and of 66,000 questionnaires mailed, 11,257 were returned.

This unusually large return of 17 percent can be attributed to the vital and tremendous interest the people of this suburban area have in their Government.

The results of the poll follow:

QUESTION AND ANSWER

	Percent
1. Regarding the Nation's fiscal policy, check one:	
(a) Balance the budget and reduce national debt before granting any tax reductions	83.5
(b) Reduce taxes before budget is balanced	16.5
2. Regarding a reduction in taxes, check one:	
(a) Across the board reduction for individual taxes only	29.1
(b) Reduction for both individual and business	48.0
(c) Reduction for low-income groups only	22.9
3. Regarding foreign aid, check one:	
(a) Favor President's program expected to be $4.8 billion for next fiscal year starting July 1, 1956	36.3
(b) Favor a reduction in President's program	45.3
(c) Oppose all financial aid to foreign countries	18.4
4. Regarding Federal aid for local schoolroom construction, check one:	
(a) A 5-year program to assist local school systems who are attempting to meet their local classroom shortage but who require additional funds	60.1
(b) A 5-year Federal-aid program with funds to be distributed to local school systems in proportion to their individual enrollments regardless of whether there is local financial participation	12.1
(c) Oppose any Federal aid to local school systems	27.8
5. Regarding the proposed 40,000-mile interstate highway system, check one:	
(a) Approve such a highway program and pay for it by issuing Government bonds	28.1
(b) Approve such a highway program and pay for it by increasing the highway user's tax; i. e., gas tax, rubber tax, etc	25.0
(c) Approve such a highway program and finance it with a combination of (a) and (b)	36.7
(d) Oppose any new Federal interstate highway program	10.2
6. Regarding the annual Post Office Department deficit of one-half billion dollars, check one:	
(a) Increase postage rates to make the Department self-sufficient	73.4
(b) Maintain existing postage rates and accept the deficit as a normal cost of an essential governmental service	26.6
7. Regarding the agricultural policy, check one:	
(a) Continue present flexible support system implemented by President's proposed 9-point program	62.0
(b) Return to rigid 90 percent of parity program	6.8
(c) Oppose any Federal assistance	31.2

Palestine Arabs Ideal Prey for Egyptian Authorities

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 22, 1956

Mr. MULTER. Mr. Speaker, the following article by Mr. Gideon Weigert describes the fate of young Palestine Arabs who have been victimized by Egyptian authorities. The article, which appeared in the March 9, 1956, issue of Israel Speaks, is worthy of the attention of our colleagues:

IN THE ARAB WORLD

(By Gideon Weigert)

THE HAPPY INHABITANTS OF GAZA

What has caused the iron crust imposed by Egyptian military authorities in the Gaza strip to begin to crack in the last few months? What has happened to the 250,000 Palestine Arab refugees and the 50,000 original inhabitants of the area, who for the past 8 years have been living in a strip 2 kilometers wide and 28 kilometers long and who, according to Cairo's "Voice of the Arabs," are "happy to the utmost, more loyal than any Egyptian, ready at a minute's notice to push themselves into the arms of death to liberate their fatherland"?

It all began last November, centering at first on the figure of Major Mustapha Hafiz, chief Egyptian intelligence officer in the Gaza strip. Major Hafiz was certainly a clever man who knew the people he was dealing with. It was his job to see to it that spies were sent into the central prison of Gaza's police fortress. These spies were, of course, nothing but young Palestine Arabs, victims of Major Hafiz's agents who were branded as Israel spies, because, after having been provoked sufficiently, they made 1 or 2 nasty remarks about the Egyptian administration in Gaza. They were never tried nor ever told how long their detention in the fortress was likely to last.

When "softened" to the point where they were willing to undertake even a desperate action in order to get out of the prison, these youths became ideal prey for the Egyptian major. One young man after the other was called into the private office of the little major with the black moustache. He was warned that the interview in progress was to be kept absolutely secret, that he and he only had been singled out by the major—a great honor—for a special favor. For the compensation of 1 dinar, the major would open the gates and release the prisoner.

A SMALL FAVOR

After a half dozen cigarettes and numerous cups of Turkish coffee the cat came out of the bag: The good-will gesture of Major Hafiz called for a small favor as a countergesture from the young man in question. He would have to take a short walk across the line, armed with a notebook and a pencil, in order to register military traffic on Israel roads. The victim gladly agreed to this small favor as the price for freedom, and thus Egyptian-trained scouts known as fedayeen entered Israel.

All went well so long as the number of youths sent over was small and the majority returned safely. However, when the Israel Defense Army began to be on the alert and dozens failed to return, their relatives in Gaza began at first to grumble and then to take action. Soon the Egyptian major began to receive anonymous letters charging him with responsibility for the lives of hundreds of youths who never returned to their parents.

In December the news broke: The Egyptian command had reached Maj. Mustapha Hafiz to Cairo. This move was followed by the mass detention of over 7,000 Palestine Arab refugees in Gaza. This time they were taken out of the strip and transported to the famous desert camp of Liman Tarra, near Cairo. Most of them were charged with having expressed the view that while Palestinians were employed at the front lines and in dangerous positions, Egyptian officers and men were sitting at their desks in rear camps, well-fed and receiving high salaries.

BITTERNESS SPREADS

January 1956: Among the Palestine Arab inhabitants and refugees alike the wave of hitherto secret opposition to the prevailing military regime in the strip has emerged more openly than ever before. The fact that recently a growing number of Egyptian-trained and commissioned Palestine Arab fedayeen have been killed or detained by the Israel security forces has caused embitterment among Palestinians to spread considerably.

Recently, a number of Palestine Arab mukhtars dared to appeal openly in letters to the Egyptian authorities, asking to put an end of the practice of sending our sons across the border on suicide and espionage missions from which they never return. To counter this movement the Egyptians are now stepping up the recruitment of local Palestine youths into regular army units instead of employing them as irregular fedayeen.

The Easter Season and the Holy Land

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 28, 1956

Mr. BOW. Mr. Speaker, the Easter season turns my thoughts to the Holy Land and to a wonderful old lady I met there last year.

Mrs. Bertha Spafford Vester is the oldest American resident of Jerusalem, having gone there with her parents as a child in 1881.

Mrs. Vester's parents were wealthy Chicagoans who suffered a series of family tragedies and decided to go to Jerusalem to seek peace in service to the local people. With a small group of friends, they began a clinic for the poor. Jerusalem is a holy city to Christian, Jew, and Moslem, and these Americans served all three. Neither religion nor race made any difference when they found people in need.

Gradually the charities expanded until today the American colony, as it is called, operates the most modern children's hospital in the area as well as an infant welfare center and an outpatient clinic. Last year the hospital treated 623 patients; the center was visited by over 22,000 mothers bringing their babies; and the outpatient clinic treated 39,636 patients.

When Mrs. Vester came to Jerusalem as an infant, the city was a part of the old Ottoman Turkish Empire. She had lived there, raising a large family and serving the poor, through all of the troubled times since the surrender of the city to General Allenby in 1917; the stormy period of the British mandate; and the Israeli-Arab conflicts of recent years. Those who know her tell me that she has never flinched at danger nor permitted it to interfere with her impartial treatment of all who needed help.

The friends this fine American woman has made over the years are legion. Mrs. Vester is now ministering to her third generation of the sick and poor. To them she has become a symbol of the United States of America, and her generosity, courage, and enterprise are considered by them to be American characteristics.

As I met and talked with this fine lady last fall, it seemed to me that her lifetime of work as an individual American probably has accomplished more for good feeling between ourselves and the people of that area than all of the dollars and all of the propaganda we have poured into the Middle East.

H. R. 10284, a Bill To Improve the Child Welfare Program of the Federal Government

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 29, 1956

Mr. REED. Mr. Speaker, I have just introduced a bill to improve the child-welfare program of the Federal Government. The improvements contained in my bill have been recommended by President Eisenhower.

Under the present law, Federal child-welfare funds may be used for local child-welfare services only in predominantly rural areas. My bill removes this limitation so that the funds can be used in any part of the State where they will be effective in establishing, extending, and strengthening child-welfare services. Emphasis will continue to be placed on services in rural areas. However, it is obvious that children in urban areas should no longer be denied the benefits of this program.

I strongly believe that problems such as those involved in child welfare must be handled by action at the State or local level. The Federal Government cannot and should not seek to take over the administration of such local responsibilities. My bill continues to recognize this principle. Federal funds are simply made available, on a matching basis, to the States for their use in meeting child-welfare problems. Under my bill, the amount authorized for annual appropriations for grants to the States for child-welfare services would be increased from the present $10 million to $12 million for the fiscal year ending June 30, 1958, and to $15 million for each year thereafter.

I am hopeful that this bill will receive prompt consideration by the Congress.

Stanley C. Allyn

EXTENSION OF REMARKS
OF
HON. PAUL F. SCHENCK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 29, 1956

Mr. SCHENCK. Mr. Speaker, it is with a deep sense of personal pride that I call attention to my colleagues here in the Congress of the United States of another high and deserving honor bestowed upon one of my good friends in the great and important Third District of Ohio.

President Eisenhower, whose outstanding ability to recognize qualities of leadership in men is a legend, has just appointed Stanley C. Allyn, of Dayton, Ohio, as American representative at the 11th session of the Economic Commission for Europe, which will be held next month.

Chick Allyn, as he is affectionately called by his close associates and friends, brings a great amount of experience, ability, and knowledge to this new responsibility.

Mr. Allyn was born in Madison, Wis., and graduated from the University of Wisconsin. Shortly after his graduation he came to Dayton to work with and for the National Cash Register Co. His steady rise to new responsibilities in this company, whose products are known, purchased, and used throughout the world, has been phenomenal but has never been questioned by his associates because they are poignantly aware of his great capacity for leadership. Mr. Allyn has been president of the National Cash Register Co. since 1940. Mr. Allyn is termed a "global citizen" because of his efforts toward world trade. The National Cash Register Co. has large plant facilities in Dundee, Scotland; Augsburg, Germany; and Bulach, Switzerland. They sell and distribute cash registers and business machines in 90 countries and thus the name and fame of the city of Dayton, Ohio, is known throughout the world. As reported in National Biographic, a publication of the American Institute of Management, he once reduced his formula for successful foreign trade to these terms:

> In order to conduct overseas business, you must understand the peoples, live with the complexities and roll with the punches.

That is not a bad prescription for successful diplomacy, and it should be obvious that Mr. Allyn will bring to his ECE task strengths rooted in attitudes as well as in experience.

Mr. Allyn, in addition to his great responsibilities with the National Cash Register Co. in guiding most successfully their huge domestic and foreign business, is also a member of many boards of directors of other important businesses and organizations. He has not stopped there—he is also deeply interested and very active in many civic activities. He is a former president of the Community Chests and Councils of America; he has been a director of the United States Chamber of Commerce and the International Chamber of Commerce along with many other professional and business organizations. In his own local community of Dayton, Ohio, he has been a tower of strength and an active participant in every forward looking and necessary civic activity. During my many years as president of the Dayton Board of Education he was always available to consider and actively work for any activity leading to the betterment of our schools. He has always also been extremely liberal with his financial help as well as his leadership ability in every worthwhile civic event.

For all of these, and many other reasons which time will not permit me to mention, Mr. Speaker, our entire Miami Valley salutes Stanley C. (Chick) Allyn and want him to know we are deeply grateful for his life and work in our community.

Defense Secretary Wilson's Appointment of Eger V. Murphree as Guided-Missile Czar Can Be No More Than a Burr and Stimulus, Says New York Herald Tribune—Far Short of Need

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 29, 1956

Mr. THOMPSON of New Jersey. Mr. Speaker, no subject is more important to all Americans, and particularly to those of us charged with grave responsibility for the national security, than the current charges being leveled against the United States Air Force, the Defense Department, and the administration by responsible experts and the press concerning the present intercontinental ballistic-missile program.

It is the considered opinion of the experts that the present program, and even the appointment of Eger V. Murphree to take hold of the big job of pushing this country's guided-missile program to victory ahead of the U. S. S. R., falls far short of what is needed. From all the evidence it seems that the Soviet Union will be able to produce missiles in quantity long before the United States is able to do so. Such a situation is intolerable from the viewpoint of national security. If such a preponderance were to occur, we and our allies will be placed in a completely untenable position and the Communist-bloc nations will be able to dictate to us in other matters vital to our security.

This is an alarming situation and one which is of the utmost importance to all of our citizens. Our newspapers are to be commended for giving this matter such thorough attention.

For the information and consideration of my colleagues, I would like to include as a part of my remarks editorials from the Trenton Times, one of the leading newspapers in my district, and from the New York Herald Tribune. Both editorials give the matter thoughtful attention and are well worth reciprocal thought and consideration. The editorials follow:

[From the Trenton Times of March 27, 1956]

TOO LITTLE, TOO LATE?

The American people are not receiving satisfactary answers to the most important question of the day: Who holds air and intercontinental ballistic missile supremacy?

Only a few weeks ago, Trevor Gardner, a California industrialist, quit as Air Force research chief after criticizing the administration for failing to speed development of the city-wrecking ballistic missile.

Substantial justification is now given Mr. Gardner's complaint by Dr. C. C. Furnas, Assistant Secretary of Defense for Research and Development, who reports authoritatively that Russia is "closing the gap" on the United States in the race to develop this missile and new jet bombers.

This is a conservative appraisal of the relative positions of Russia and the United States in a contest which may involve national survival. There is also informed opinion to the effect that we have already lost this race.

No less an authority than Gen. Nathan F. Twining, head of the Air Force, has conceded that an air attack "could pour out of the Soviet Union engulfing and overwhelming not only cities or States but our entire Nation."

There is no defensible reason why Soviet Russia should close the gap in this vital production. With our superior industrial resources we should take and hold a safe lead in all that concerns preparation for defense against aggression.

Second place in such a race involves fatal possibilities. We can fail only if the administration displays lack of vision, initiative, and energy in meeting the Soviet challenge. If the air and missiles program is ineffective and disorganized, as has repeatedly been charged, President Eisenhower and his Defense Secretary, Mr. Wilson, may on some tragic day in the future have to face that most devastating of indictments—"too little, too late."

[From the New York Herald Tribune of March 29, 1956]

THE RACE FOR THE MISSILE

In the matter of Defense Secretary Wilson's appointment of Eger V. Murphree to take hold of the big job of pushing this country's guided-missile program to victory ahead of the U. S. S. R., it is easy to say that this is a commendable step which should have been taken long ago. Mr. Murphree is an eminent research scientist and administrator, distinguished for his considerable part in planning and organizing the Manhattan Project which created the atomic bomb. He is certainly well qualified.

But the serious question, it seems to us, is whether the new Special Assistant to the Secretary of Defense will be given sufficient authority to do what needs to be done—namely, to judge, evaluate, force cooperation and get the vitally important program into focus and swift action. According to the official announcement, Mr. Murphree "will be responsible for the direction and coordination of guided-missiles research, development, engineering, and production, except those types already adopted for service use." That sounds fine, within limits. But the Department of Defense goes on to say: "If he (Mr. Murphree) becomes involved in an interservice disagreement concerning matters within his authority, the Secretary of Defense will have final decision." Furthermore, nothing in the Murphree appointment "modifies the 'statutory responsibility of any of the agencies of the Department of Defense.'" And as Mr. Wilson said to reporters, "if he

gets into a jam with the services I'll be in it with him."

In short, then, Mr. Murphree is not a "czar" at all. As we understand it, he is essentially only an expediter. In the event of an "interservice disagreement," he would be outranked by each of the service Secretaries, by their deputies and by their assistants. If Mr. Murphree determines that there is a serious duplication or faulty concentration on wrong technical approaches, then his only logical recourse would be to ask a briefing from the Joint Chiefs of Staff. Assuming that he was still dissatisfied, then his only resort would be to report back to the Secretary of Defense.

Mr. Murphree can be a burr and stimulus to Mr. Wilson, but that is about all. The new appointee will have no function to decide between the Army's Nike and the Navy-developed Air Force guided missile. Such matters are left to the Joint Chiefs of Staff and higher opinion, with all the danger of open invitation to continue the interservice rivalry and expedients of compromise which have never been fully resolved.

Now let it be understood that a lot of precious time has been lost in the guided-missile race. The United States has underestimated the U. S. S. R.; there is considerable evidence of lag on our part. On this page yesterday Stewart Alsop quoted warnings from Air Force leaders which should have stirred public apprehension, but have not. Gen. Nathan Twining, Chief of Staff, says that the Soviets "have long since passed us in quantity and they are making remarkable strides in quality." Gen. Thomas D. White, Deputy Chief of Staff, says: "The Soviets are currently beating us at our game—production." Lt. Gen. Thomas S. Power, Chief of Air Research and Development Command, says: "With both quantitative and qualitative superiority on their side, we would lose the protection of the deterrent force and be at their mercy. This danger is very real and immediate."

In all fairness to the Eisenhower administration, it should be pointed out that the President, the Cabinet, and the National Security Council are deeply concerned and are actively working on the problem. It is true that a tremendous guided-missile program, just short of "crash" magnitude, has been authorized. But the fact nevertheless remains that the United States has lost time. While the President expressed confidence last month that everything was being done "to keep our position in a proper posture," he did say: "In certain fields I think they are probably ahead of us. But those are limited fields in a great big field."

This newspaper is equally concerned about the guided-missile program. For what is involved here is the question of maintaining the balance of power of the free world as against the Soviets. Obviously this balance of power comprises many values—military, political, economic, moral, and spiritual. And if this balance, however defined, shifts from the free world, the will to resist may be seriously impaired in crucial areas.

In our opinion, the guided-missile program must be resolutely pushed forward either in the Pentagon or elsewhere. On the point as to whether all is already being done that is humanly possible, or whether all the technicians that can be used are already at work, let it be remembered that if the Soviets are moving ahead—as they clearly are—then the United States must do even more. This country will have to summon coordinating ability to get its program on the right track. America must concentrate on the whole field of modern weaponry as it has never concentrated before.

What strikes us is that, given the present state of mind in the several services and the general tendency in the past of underestimating Soviet technology and production, there may be no other way to resolve and launch a major program than by a Manhattan project type of procedure. Certainly we do not feel that Mr. Murphree's appointment goes to the heart of the problem, or that his accession as even an expediter is warmly welcomed by the services.

There is a further question which all the American public must appreciate. On the world balance of power, of which the guided-missile program is such an important part to all freemen, we must not be governed by undue considerations of balanced budget. Maximum funds and maximum work are essential to make absolutely sure that the United States does win the race for the free world. In short, we must put all our resources and brainpower to the task of devising the first and best intercontinental ballistic missile. Being second best is not good enough for survival.

Action on the Sugar Bill Should Be Completed Soon

EXTENSION OF REMARKS

OF

HON. THOR C. TOLLEFSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 5, 1956

Mr. TOLLEFSON. Mr. Speaker, quite a few people in my State are upset by the failure of Congress to complete action on the sugar bill which the House approved last year and which the Senate acted upon in February. House and Senate conferees have been appointed but have adjourned without arriving at any agreement upon the measure. Now the House has taken a recess until after Easter and it begins to look as if the farmers who plant sugar beets in my State may not know until too late in the season whether sugar quotas will be increased. The party in control of Congress must bear the responsibility of failure to act in the matter.

As all the members know from last year's discussion of the bill, it seeks to give American producers a fair share of the increased sugar consumption in this country. Under existing law, which fixes quotas on the amount of sugar produced in this country, all the benefits resulting from our rapidly increasing United States population with its increasing sugar consumption goes to other countries and not to our own. Other countries may put additional acreage into production and produce more sugar to take advantage of our growing markets, but our own people cannot do so. The bill which was approved by the House last year sought only to give a fair share of increased markets in the United States to our own people. Is that asking too much? The majority of the members of the House did not think so. It seems to me, Mr. Speaker, that the chairmen of the appropriate committees of the House and the Senate, and perhaps the leadership of both bodies, have a responsibility to domestic producers to exert every effort to bring a conference report to both Houses so that we may let our farm people know at the earliest possible date what they may expect. I firmly believe that our domestic producers are entitled to increased quotas.

If the farmers in my State could plant additional sugar beet acreage, then the total sugar beet production in central Washington could be increased to the point where a new sugar refinery could be built. This refinery would furnish employment to a considerable number of people.

Women's Congress on Housing

EXTENSION OF REMARKS

OF

HON. PAUL F. SCHENCK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 28, 1956

Mr. SCHENCK. Mr. Speaker, recently there has been some criticism directed toward the Honorable Albert Cole, a former Member of this House and present Director of the Housing and Home Finance Agency. This criticism seems to stem, Mr. Speaker, from the announced plan of the HHFA to hold a Women's Congress on Housing here in Washington during the month of April. The tone and development of our great Nation, Mr. Speaker, is founded in the families of America and few will challenge the influence exerted by the mothers and homemakers of our country. The family life of America revolves around and evolves from the homes.

Improvements in the design, equipment, arrangement, and general appearance of the homes are tremendously important if the mothers in this Nation are to be given more time to cope with their family and civic responsibilities.

It has been said, Mr. Speaker, that while men design and build our homes it is the women who really bring and develop real meaning in our homelife. Therefore, Mr. Speaker, since the mothers of America live, work, raise families, and create family life in our homes, I ask this question: "Who are better qualified to make suggestions for better design, better equipment, and more conveniences in our home than are the women?"

It is my opinion, Mr. Speaker, that the Women's Congress on Housing can well have important and significant beneficial effect on the hundreds of thousands of new homes that will be built in America along with the remodeling of hundreds of thousands of already existing homes. Since the home-building industry is a very vital factor in our entire national economy, this phase, too, is extremely important.

The publisher of the Dayton Journal Herald, one of the important newspapers of Ohio, Dwight Young, who is a past president of the ASNE, took special notice in one of his recent columns, Talking It Over. Under unanimous consent, I present his article as a part of these remarks:

TALKING IT OVER

(By Dwight Young)

Chalk up another mark for Ike. If not for him personally, at least the administration at Washington.

Reference is to the announcement that the Federal Government is undertaking to find out how the housing industry can spend $100 billion most effectively and acceptably to the public in the next 10 years.

And so, Albert M. Cole, Federal Housing Administrator, is going to the women, particularly the housewives of the country, for their ideas on the subject. A Women's Congress on Housing is now being created. It will consist of approximately 100 housewives. The first meeting will be held in Washington late in April.

The ladies comprising the congress will be called upon to tell builders, through the Government, what types of homes, what facilities, and what interior arrangements families desire when considering buying a house.

This is an innovation someone in authority ought to have thought of and utilized long ago, for normally, the housewife has the biggest voice and usually the last word in determining what kind of a house the family should look for. Much too often she never finds anything even approaching her desires.

Sometimes the laundry isn't laid out for the most efficient use. Or the clothes chute isn't where it ought to be. Perhaps the wash basins are too low or too small. Maybe the kitchen arrangement—the closet space, the shelving, and the cabinets—leaves her cold. For men made all of those decisions, whereas women spend more time in the average home, keeping it clean and either performing personally or supervising the household chores, than all the remainder of the family combined.

If the Women's Congress on Housing takes its responsibilitiles seriously, and if the Housing Administrator is really in earnest in seeking the housewife's opinion, we may look for a general revision in house building practices throughout the country.

A P. S. to Senator Lehman

EXTENSION OF REMARKS
OF

HON. WATKINS M. ABBITT

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1956

Mr. ABBITT. Mr. Speaker, Virginia has been fortunate in the past one-half century to have had so many fine news editors to help chart the course of our Commonwealth. They have done much to contribute to the progress and well-being of our people.

It is most fortunate indeed that we have had in Virginia, during these trying times since May 17, 1954, a man who has dedicated his life to the betterment of his fellow citizens and the preservation of our way of life in the Commonwealth of Virginia. James J. Kilpatrick, editor of the Richmond News Leader, has gone way beyond the call of duty to awaken our people to the perilous situation confronting us at this time and to the realization that our very way of life is being threatened. I commend him for the great work he has done and is doing to preserve this great Republic of ours.

Under leave to extend my remarks, I desire to include herewith an editorial appearing in the Richmond News Leader on Monday, March 26, 1956, which I think is very appropriate and should be read and digested by the representatives of the people in this country in the halls of Congress:

A P. S. TO SENATOR LEHMAN

Virginia's Senator A. WILLIS ROBERTSON did so polished a job of carving up New York's Senator LEHMAN on Friday that little enough remains to be added on the specific point to which Mr. ROBERTSON addressed himself. The Virginian quoted Senator LEHMAN'S wild-eyed denunciation of the southern manifesto—the gentlest thing Mr. LEHMAN had called the southerners was "law violators"—and then reminded Mr. LEHMAN, in documented chapter and verse, of the New Yorker's own activities against the 18th amendment. During the twenty-odd years that Mr. LEHMAN was resisting prohibition, surely Mr. LEHMAN did not regard himself as a law violator or a nullificationist. Neither did the State of New York see anything wrong in winking at 30,000 speakeasies and in doing everything within its power, as a State, to frustrate Federal enforcement of prohibition laws.

To this pointed review, Senator LEHMAN'S only response was a feeble stammer that New York's resistance to prohibition was different from the South's resistance to integration.

In some ways, one may agree, it was different. In the case of the 18th amendment, the States themselves had changed the Constitution. By constitutional process, the States themselves had prohibited "the manufacture, sale, or transportation of intoxicating liquors * * * for beverage purposes." The language was clear and unequivocal.

This time, in the matter of school segregation, the States themselves have made no change whatever in the Constitution; rather, the Supreme Court, by judicial legislation, has undertaken to overthrow a construction of the 14th amendment that had been fixed and definite for 86 years. Certainly we perceive that difference.

But perhaps we may add a postscript to Senator ROBERTSON'S address, dealing with still another chapter of northern inconsistency on which the Virginian scarcely touched. Let us consider, while the matter of constitutional resistance is under review, the story of the Northern States and the personal liberty laws.

It will be recalled that when the Constitution was ratified in 1788, it contained this clear and explicit paragraph in article IV:

"No person held to service or labour in one State, under the laws thereof, escaping into another, shall, in consequence of any law or regulation therein, be discharged from such service or labour, but shall be delivered up on claim of the party to whom such service or labour may be due."

That was, in its day, a vital provision of the Constitution. It reflected one of the essential compromises on which union was reached. Without that provision, in the view of every responsible student of the period, the Constitution never would have been ratified at all. This, then, was the fundamental law of the land until the very day that the 13th amendment, abolishing slavery, superseded its terms in December 1865.

But what happened? Congress scarcely had adopted its first fugitive-slave law of 1793 before Northern States embarked upon a half century of resistance, defiance, nullification, and—in Senator LEHMAN'S word—"anarchy." In time, no fewer than 14 States passed laws designed deliberately to frustrate the plain constitutional mandate. Let us call the roll: Connecticut, Iowa, Maine, Massachusetts, Michigan, Pennsylvania, New York, Ohio, New Hampshire, Rhode Island, Vermont, Illinois, Indiana, Wisconsin.

These northern legislatures were joined by northern governors in defying the Constitution. Governors Kent and Fairfield, of Maine, for example, rejected Georgia's request for the return of a fugitive slave in so contemptuous a fashion that the Georgia Legislature declared all visitors from Maine would be regarded, thereafter, as kidnapers subject to arrest on sight. Governor Seward, of New York, similarly refused to respond to a request from Virginia. The defiance of Pennsylvania led to the key case, in 1842, of *Prigg* v. *Pennsylvania*, in which the Supreme Court threw out all State personal-liberty laws as unconstitutional.

Northern States then came back with new tactics of resistance, among them a series of State laws prohibiting State officials from aiding in any way to fulfill the requirements of article IV. Vermont, in what Senator LEHMAN doubtless would term "an act of chaos and anarchy," adopted a law, in the very teeth of the Constitution and the Court, flatly freeing all fugitive slaves and declaring that every person who attempted to detain a fugitive slave in Vermont would be sentenced, upon conviction, to not less than 5 or more than 20 years in prison.

There came the case of *Jones* v. *Van Zandt*, in which Mr. Justice Woodbury, who himself was strongly opposed to slavery, again upheld Federal fugitive slave legislation. "This court has no alternative," he said, "but to stand by the Constitution and laws with fidelity to their duties and their oaths. * * * Their path is a straight and narrow one, to go where the Constitution and laws lead them."

Early in 1847, Mr. Justice McLean, defending the court from the bitter assaults upon it, had this to say: "So plain are the provisions (of the Constitution) on the subject (of fugitive slaves) that no one can mistake them. How is it expected or desired that a judge shall substitute his own notions for positive law? When this shall become the rule of judicial action, there will be no security for character, property or life."[1]

Came March 6, 1857, and the Supreme Court's opinion in the Dred Scott case. In this memorable decision, the Court once again stuck to the plain terms of the Constitution. Scott, a slave, was held to be what the Constitution had made him: The property of his master. The Constitution applied to all States and Territories.

But with this opinion, the Northern States erupted into a fury that far surpassed any reaction in the South since May 17, 1954. All told, 22 Northern States (including Oregon, we might advise Senator MORSE) denounced the Supreme Court in formal resolutions. Wisconsin declared that a "positive defiance" was "the only rightful remedy." New York resolved that the decision "has impaired the confidence and respect of the people of this State" Ohio termed it "a palpable and unwarranted violation of this sacred instrument." Michigan contemptuously passed a law defying the court on every basic point it had decided. Massachusetts resolved that it would recognize the rightful authority of the court, but the people of Massachusetts would decide what was rightful: "They will never consent that their rights shall be impaired, or their liberties invaded, by reason of any usurpations of political power by the said tribunal." Massachusetts further resolved "that no part of the decision of the Supreme Court of the United States, in the case of *Scott* v. *Sandford*, is binding, which was not necessary to the determination of that case."

Now, this newspaper is not, of course, defending slavery in reminding our Northern critics of events a century ago. We are defending the Constitution. And we are attempting, also, to suggest to our friends up North that there have been times in our history—many times—when sovereign States have exercised their full sovereign powers to resist, in every ingenious way they could

[1] This paragraph and the one before it could have been left out of this review. They are left in simply to make the point that the country has known justices, from time to time, who relied upon law, not sociology, in deciding grave questions.

devise, what they themselves deemed to be encroachments by the Federal Government upon their sovereign rights. In these undertakings, whether they involved the embargo, the Bank of the United States, the Personal Liberty Laws or other issues, the Northern States—far more than the Southern States—were leaders and advocates of interposition. It is a curious thing, we would say to Senator LEHMAN, that what the North then viewed so proudly as lawful resistance, it views as anarchy in the South today.

Election of the President of the United States

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Thursday, March 29, 1956

Mr. DOUGLAS. Mr. President, one of the most penetrating and helpful analyses of the various proposals to change our methods of electing the President of the United States was a letter to the New York Times written by a number of the country's leading political scientists and published in that paper on July 17, 1955.

Although many students of political science have been misled by the alleged reform elements in the Lodge-Gossett and Mundt-Coudert proposals, these outstanding university teachers, headed by Prof. Stephen K. Bailey, of Princeton University, clearly perceived and pointed out the dangers in the various proposals which, in their combined form, the Senate has wisely decided to send back to the Committee on the Judiciary.

For the information of members of that committee, as well as Members of Congress as a whole, I ask unanimous consent that the letter may be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

TO ELECT THE PRESIDENT—PROPOSALS TO CHANGE METHOD SAID TO LESSEN RESPONSIBILITY OF OFFICE

(The signatories to the following letter include political scientists and a historian, teaching at various universities.)

To the EDITOR OF THE NEW YORK TIMES:

There are at present under consideration in the Senate three proposals to change the method of electing the President—the Daniel-Humphrey, Kefauver, and Mundt-Dirksen resolutions.

The core of the Daniel-Humphrey resolution is the provision that electors be abolished but electoral votes be retained and divided in each State in proportion to the popular vote, rather than the present system which, as a matter of accepted practice, results in the total electoral vote being cast in accordance with the plurality of the popular vote. The proposal requires a candidate to receive a minimum of 40 percent of the electoral vote in order to win.

The Kefauver resolution is essentially the same but it stipulates no fixed plurality of electoral votes.

The Mundt-Dirksen resolution does not abolish the electoral college, but provides that each State shall nominate and elect its presidential electors in the same manner as its Senators and Representatives—the district system.

Our objections to the 3 proposals are 5 in number. All three resolutions are less democratic than the present system for electing the President. The proponents of the resolutions claim that they would prevent the election of a President who received fewer popular votes than a rival candidate, but such an election decided without recourse to the House of Representatives occurred but once—1888.

PLURALITY VOTE

The Daniel-Humphrey resolution would allow a man to be elected President if he received a plurality of much less than 40 percent of the popular vote, and under the Kefauver resolution any plurality of the electoral or popular vote would suffice. The Mundt-Dirksen resolution would insure at least as much underrepresentation of the popular vote as exists in the election of the House of Representatives and the Senate.

Proponents of the resolutions have stated that they would improve the quality of Presidential candidates. Yet the Executives chosen since 1900 compare well with those of other free countries and are among the best that we have produced.

The Daniel-Humphrey and Kefauver resolutions would tend to influence our politics toward a multiparty system. Two of the main factors forcing American diversity into the two-party mold have been the requirement of a majority of the electoral votes as a condition for winning the Presidency and the practice of nominating electors on a general statewide party ticket.

Under our present system of electing the President, minor party votes are wasted unless cast for the candidate of a major party. Under the Daniel-Humphrey and Kefauver proposals they would be cumulative from State to State, thus encouraging the development of minor parties. It would be extremely difficult to run our separation-of-powers, check-and-balance Federal Constitution under a multiparty system.

All three of the proposals would severely upset the balance of representation in our Republican and Federal form of government. At present the House and Senate greatly overrepresent the rural elements of our population. This overrepresentation is to some extent counterbalanced by the intensive political cultivation of the great doubtful urban States which is necessary to win a presidential election. This results in some Presidential concern for important minorities in the great States, a concern which the proponents of these resolutions wish to destroy. But this feature of Presidential politics reflects a process of accommodating diverse points of view, a process essential to a two-party system and rule by majorities.

DOUBTFUL STATES

All three of the proposals would destroy the political influence of doubtful States and increase that of the States which are under one-party domination. The populous doubtful States, which usually cast large blocks of electoral votes for one candidate or another, could be expected to give a candidate a margin of only a few electoral votes under normal conditions, while those States which lean heavily to one party would return a large margin of electoral votes. The small rural one-party States, then, could be expected to give a larger lead in electoral votes to a candidate than the populous doubtful States.

In the South, where voting in national elections is light because of disfranchisement and the nature of the primary, this lead may well be allotted as the result of a much smaller plurality of the popular vote than in northern pivotal States.

Under any 1 of the 3 proposals the South, and to a lesser extent the Midwest, would increase in political influence. The South would rise in the councils of the Democratic Party, dictating much of the platform and often the presidential candidate. The right wing of the Republican Party, whose strength is in the midwest, would gain a comparable advantage in the GOP.

Since the presidential politics of the three proposals would emphasize those States which are predominantly of one party or the other, it would confine the choice of candidates to such States. In short, we would be changing a tendency to pick presidential candidates from the most populous States to a tendency to pick them from the least populous States.

The proponents of the 3 proposals claim they would insure a 2-party system in the South, since they would encourage the Republican Party to struggle for a portion of the South's votes.

It is difficult to see what the politically dominant elements of the South could gain by moving to a 2-party system, since the weight of political influence under any 1 of the 3 proposals would go to the States where the 1 party is dominant. Persons who think the proposed resolution would bring two-party politics in the South underestimate the strength of the controlling political interests and the obstructive electoral machinery at their command.

In summation, the probable consequences of the current proposals seem to us to invite gravely injurious results. We cannot overlook the contemporary pattern of efforts to dismantle the 20th-century concept of the presidency and to recreate the office in the Whig image of the mid-19th century.

The proposed Bricker amendment, the Daniel-Humphrey, Kefauver, and Mundt-Dirksen resolutions, the 22d amendment, all have a common tendency: they blur and lessen presidential leadership and responsibility. Given the times in which we now live, these are reckless proposals, however well intended.

Comparison of Benefit-Cost Ratio of Sacramento Deepwater Project

EXTENSION OF REMARKS
OF
HON. LEROY JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 28, 1956

Mr. JOHNSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a report concerning the cost ratio of the Sacramento deepwater project as found by the United States Army engineers' study revised as of January 8, 1954, and also as found by the Stanford Research Institute findings and increased construction costs.

The engineers found that the benefits-to-cost ratio was 1.12 to 1. The Stanford Research Institute result as of March 15, 1956, found that the benefit-cost ratio was 0.83 to 1.

The Stanford Research Institute report is as follows:

COMPARISON OF BENEFIT-COST RATIO OF SACRAMENTO DEEPWATER PROJECT

FOREWORD

This report presents the results of a research study conducted by Stanford Research Institute for the Board of Port Commissioners of Stockton. Volume I includes a summary of the findings and conclusions on the amount of ocean traffic for the Central Valley in 1960 and 1965. Volume II includes detailed discussions of the commodities comprising this traffic as well as a description of the Central Valley economy.

The assistance and advice of the many organizations and individuals interviewed are acknowledged; principal contributions are noted along with the discussion of each commodity in volume II. Continuing help has been provided by E. E. Ferrari, director, and C. W. Phelps, traffic manager, port of stockton; W. G. Stone, port director, Sacramento-Yolo Port District; and many individuals at the Giannini Foundation of Agricultural Economics, Federal-State Market News Service, Commodity Credit Corporation, and the United States Corps of Engineers.

The study was conducted in the economics research division of Stanford Research Institute by N. R. Maines, project leader, and James A. Willson, under the general direction of Robert O. Shreve. Other Stanford Research Institute personnel contributing to the study were Dr. William Bredo who reviewed the findings on agricultural commodities; Harry R. Woltman who prepared the analysis of the Central Valley economy; and W. B. Beatty, senior mining engineer, Floyd J. Campbell, of the Pacific Northwest division, and Dolores J. Winans, of the economics research division. Rate data were supplied by C. R. Nickerson, Pacific Coast Tariff Bureau.

SECTION I. INTRODUCTION

The port of Stockton is located in the Central Valley of California about 75 miles east of San Francisco Bay. It plays an important role in northern California waterborne commerce and in 1954 handled about one-seventh of all northern California (San Francisco Bay area) ocean traffic, excluding bulk petroleum.

The Stockton Port District, a public corporation, was established in 1932 to develop and operate the port of Stockton. The board of port commissioners, consisting of five members, establishes policies for the port, and these policies are administered by the director of the port.

Traffic through the port has been maintained at a high level, but the board has recognized that future changes may have large-scale effects on the port. In order to obtain assistance in its long-range planning for the port, the board requested Stanford Research Institute in October 1955, to conduct a program of research.

The objective of the study was to analyze factual data and informed opinion in order to project the tonnage of ocean traffic moving into and out of the Central Valley in 1960 and 1965. The principal factors considered were (1) the probable changes in shipments and receipts of certain dominant commodities, and (2) the effect of future completion of a deepwater port at Sacramento, 45 miles north of Stockton.

Attention was given the future ocean traffic under 2 situations which might prevail in the Central Valley: first, the present situation with but 1 port, the port of Stockton; second, a 2-port situation with the addition of a deep-water port at Sacramento. In the latter case, in order to permit direct comparisons between the movements through both ports, assumptions were made, as described in section III, as to conditions which may prevail at a Sacramento port. Full operations at Sacramento were assumed by 1960, including service from carriers equal to that at Stockton and port facilities equal in most respects to those at Stockton. The assumptions with respect to the operation of a deepwater port at Sacramento should not be construed as an opinion by Stamford Research Institute as to whether or not such a port will be developed, or when it might begin operations.

Central Valley ocean traffic, as considered in this study, has been limited to that which would move through any deep-water port in the Central Valley. Traffic for the Central Valley which moves through ports outside the valley has not been included as Central Valley ocean traffic.

In carrying out the research program, statistics and published documents bearing on waterborne movements were collected and analyzed. Interviews were conducted with all large-volume shippers and receivers of the principal commodities under consideration and with carriers, Government officials, trade associations, port officials, and others in a position to supply data on present and future ocean tonnage movements.

The balance of this volume describes the results and conclusions of the research, the important factors and assumptions made with respect to Central Valley ocean traffic facilities and the commodities which comprise this traffic, and the analysis of each of the commodities studied.

SECTION II. RESULTS AND CONCLUSIONS

Major factors in future ocean traffic for the Central Valley

This study has indicated that the most important factors affecting future ocean traffic for the Central Valley are (1) the availability of ocean service in the valley at one or more ports, and (2) changes in the amount of certain dominant commodities shipped and received.

No significant change in the service available through the port of Stockton was foreseen, but the establishment of a deepwater port at Sacramento would be expected to attract additional traffic to the Central Valley from San Francisco Bay ports.

The effect of general trends in northern California ocean traffic, particularly in relationship to the expanding economy of the region, was investigated as a possible influence on future ocean traffic for the Central Valley. Ocean traffic has decreased consistently, despite an increase in population and economic activity; so this factor could not be used as a basis for this study. The influence of increases and decreases in movements of individual commodities, however, was apparent; so the probable changes in movements of these commodities over the next decade were studied. Nine commodities accounted for 93 percent of port of Stockton ocean traffic in 1955, all other commodities for 7 percent. The sum of the projected tonnages for these is the total future ocean traffic forecast for the Central Valley.

Results

The results of the study, showing the effect on Central Valley ocean traffic of changes in individual commodities, are compiled in table I. Projected tonnages are shown under both of the situations considered, with one port in the Central Valley at Stockton as at present, and with two ports in the Central Valley by the assumed addition of a deepwater port at Sacramento. The tonnages shown for each commodity are discussed in more detail in section IV of this volume.

Conclusions

From the data shown in table I and elsewhere in this report, the following conclusions have been drawn with respect to future ocean traffic for the Central Valley:

1. With the port of Stockton the only Central Valley deepwater port, Central Valley ocean traffic has averaged around 1 million tons per year during the last 4 years. No change from this general magnitude is indicated for 1960 and 1965.

2. With the addition of a deepwater port at Sacramento, under the assumed conditions of services and facilities previously described, total Central Valley ocean tonnage should increase by the amount attracted to Sacramento from San Francisco Bay and other ports outside the Central Valley. The amount of increase projected is shown by the following figures.

[In thousands of tons]

	1955	Projected	
		1960	1965
1 port: Stockton	1,030	1,165	960
2 ports:			
Stockton	-------	880	735
Sacramento	-------	470	435
Total	-------	1,350	1,170
Percent increase with 2 ports	-------	16	22

3. The addition of a deepwater port at Sacramento would reduce Port of Stockton traffic by 285 thousand tons in 1960 and 225 thousand tons in 1965, according to the projected tonnages in table I. This adverse effect on Stockton is graphically presented in figure 1, which shows actual tonnages through the port of Stockton for 1950 through 1955 and projected tonnages, with and without a deepwater port at Sacramento, for 1960 and 1965. Without a Sacramento port, Stockton traffic shows a modest increase (13 percent) in 1960 over 1955 and a small decrease (7 percent) in 1965. With a Sacramento port, however, Stockton traffic shows a substantial decrease both in 1960 (15 percent) and in 1965 (29 percent).

4. The adverse effect of a Sacramento port on Stockton traffic is even more apparent when the fluctations in shipments of bulk minerals are disregarded, so this commodity has been shown separately in figure 1. Bulk minerals—principally iron ore—account for the largest tonnage item at the port of Stockton and future shipments are relatively unstable because of dependence on the demand of but one market—Japan. With bulk minerals disregarded, and without a deepwater port at Sacramento, Stockton traffic shows an increase over 1955 of about 11 percent both in 1960 and 1965. With a Sacramento port, however, Stockton traffic shows a decrease of 27 percent in 1960 and 20 percent in 1965.

5. Despite losses of tonnage from Stockton to a deepwater port at Sacramento, under a two-port situation in the Central Valley, the port of Stockton would still ship and receive most of the tonnage. Figure 2 shows the projected traffic for each port and for the Central Valley in 1960 and 1965. The distribution between the two ports in both 1960 and 1965 is about 65 percent for Stockton, 35 percent for Sacramento. The determination as to which port would handle movements of each commodity was based mainly on the location within the Central Valley of the origin of shipments or destination of receipts, and the rail or truck rates between these locations and the two ports.

6. The principal commodities in port of Stockton traffic are bulk minerals and grains (rice and barley), each of which represents more than 25 percent of the 1955 total, and canned foods, which represents 18 percent. The composition of port of Stockton ocean traffic by principal commodity is shown graphically in figure 3 for 1955, 1960, and 1965. The principal changes in commodity movements projected for future years, based on the assumptions and analysis described in section IV, are the following:

Iron-ore shipments, after increasing greatly in 1956, are expected to return to present levels by 1960. Shipments in 1960 should be sufficient only to keep a Nevada source of supply open to Japan. The continuance of the iron-ore movement is dependent on increasing needs of the Japanese steel industry and the competition of other iron-ore producing regions.

Rice exports to Japan are expected to decrease greatly, so that total rice movements in 1965 are projected for domestic markets only and are shown as less than half those in 1955. Rice exports from California to Japan became important in 1951, but it is anticipated that the demand in future years will be curtailed because of resumption of supply from sources which previously served Japan and substitution of other grains in the Japanese diet.

Canned foods shipments through the port of Stockton are expected to increase 35 percent in the next 10 years, mainly because of increasing population and per capita consumption in the domestic markets served by ocean movements.

Other commodities shipped and received through the port of Stockton are expected to increase 40 percent in the next 10 years. They include dried fruit, wine, beans, molasses, fertilizer, and miscellaneous commodities. An allowance is made for additional commodities which may move in large volumes in the future.

The effect of a deepwater port at Sacramento on the composition of Stockton traffic is also shown in figure 3. With the Sacramento port in existence, rice shipments would become negligible through Stockton, barley shipments would be halved, and a large share of canned foods tonage would be transferred from Stockton to Sacramento.

7. The commodities on which a deepwater port at Sacramento would depend would be largely grains (rice and barley) and canned foods, as shown in figure 4. Grains and canned foods comprise more than 75 percent of the total tonnage shown for 1960 and almost 70 percent of total tonnage for 1965. The importance of the many other commodities which would remain in Stockton traffic under a 2-port situation is emphasized by the comparison of the 2 ports in figure 4.

8. The apparent decline of ocean traffic for the Central Valley between 1960 and 1965 may be reversed by changes other than those projected in this study or by the development of new tonnage over and above that for which allowance was made. However, the trend of ocean traffic for northern California does not support any necessary increase on account of general economic growth. Under a continuing situation of 1 port in the Central Valley, the entire decrease from 1960 to 1965 is accounted for by the expected reduction in bulk minerals shipments. Under the situation of two ports in the Ceneral Valley, the decrease for the port of stockton would again be accounted for by the reduction in bulk minerals shipments, that for a Sacramento port by the anticipated reduction in rice shipments.

SECTION III. FACILITIES FOR CENTRAL VALLEY OCEAN TRAFFIC

The amount of ocean traffic for the Central Valley depends to a large extent on the facilities for transporting it to and from the valley. The port of Stockton presently offers excellent facilities for cargo handling and good service by carriers. The establishment of a deep water port at Sacramento would provide additional facilities. The effects of changes in facilities for Central Valley ocean traffic are discussed in this section along with the effects of other changes in transportation practice.

Present service at the port of Stockton

The port of Stockton competes with San Francisco Bay ports for Central Valley ocean tonnage, offering large savings to shippers and consignees in transportation costs to and from shipside. When shipments must be made to ports not served by the carriers who call at Stockton or when sailing schedules from Stockton do not suit the schedules of shippers, cargo may be sent to San Francisco Bay ports for loading on other vessels. Thus, any added service to Stockton would be expected to increase the amount of Central Valley ocean traffic. The assumption was made that adequate service would be provided to match the tonnage of commodities moved through the port, but that no substantial change from the present pattern of service would be needed.

Another Central Valley deepwater port

The establishment of another Central Valley deep water port at Sacramento would permit Sacramento Valley shippers and consignees to route cargo which is now moving through San Francisco Bay ports and the port of Stockton through the port at Sacramento, with a consequent savings in transportation costs to and from shipside. To the extent that additional cargo was gained from bay ports, a net increase in Central Valley ocean tonnage would result. Cargo gained from the port of Stockton would represent only a redistribution of the existing Central Valley ocean tonnage.

The effect of a deep water port at Sacramento on total Central Valley ocean traffic and on that through the port of Stockton was considered in projecting future tonnage.

In order to permit a direct comparison between Stockton and Sacramento tonnage, certain assumptions were made as to the operating conditions at a deep-water port at Sacramento. In the first place, it was assumed that the port might be in full operation as early as 1960, although no definite time schedule has been set for its completion. In the second place, it was assumed that ocean service would be provided by carriers whenever outbound or inbound cargo justified the call, and that it would correspond in general to the service now provided the port of Stockton. In the third place, it was assumed that a port at Sacramento would provide facilities similar to those at the port of Stockton and adequate for anticipated cargo movements, except that the bulk material handling facilities at Stockton (in which principal shippers and carriers have a financial interest) would not be duplicated at Sacramento. Some of these assumptions may be considered optimistic in view of the long time which has been required for the port of Stockton to attain its present stature, but it was considered essential that variations in service between the two ports be minimized so that the effects of commodity quantities and movement patterns could be more accurately compared.

Other factors affecting Central Valley transportation

The traffic through either 1 or 2 Central Valley ports could be greatly affected by changes in transportation methods or costs. It was necessary to assume that no major change of this nature would upset the movement patterns now observed. Specifically, the following assumptions were made.

1. No technological improvement in transportation facilities will occur which will change the general movement patterns. For instance, the possible effect of introducing trailerships (roll-on, roll-off vessels) in the coastwise or intercoastal trade has not been considered. Such a development would probably be to the detriment of inland seaports, incidentally, because carriers would be inclined to minimize the number of calls and the amount of terminal facilities in any port area.

2. The rate differentials between various means of transportation (rail, truck, water) will remain constant at the amounts prevailing in January 1956. Thus, commodities now moving by ocean vessel would be assumed to continue to move by ocean vessel during the decade under consideration.

SECTION IV. COMMODITIES COMPRISING CENTRAL VALLEY OCEAN TRAFFIC

Total Central Valley ocean traffic, as represented by that through the port of Stockton, is shown for the last 6 years in table II, and indicates an average of around 1 million tons per year during the last 4 years.

The commodities listed in table II are those which have been most prominent in port of Stockton movements. They amount to 93 percent of the total tonnage in 1955. It may be noted that all of the commodities listed in table II are the product of the Central Valley or intended for consumption in the Central Valley with the exception of bulk minerals (iron ore and coal). The fact that agriculture provides the economic base for the Central Valley is reflected in the commodities listed. Again bulk minerals is the exception—all other products are linked to agricultural production or processing.

TABLE II.—*Ocean traffic through the port of Stockton, 1950–55*

[Thousands of tons]

Commodity	1950	1951	1952	1953	1954	1955
OUTBOUND						
Bulk minerals	0	0	203	466	182	283
Rice	75	57	46	65	149	189
Canned foods	154	115	137	157	194	185
Barley	49	189	198	87	43	101
Dried fruit	52	32	88	87	78	69
Wine	13	12	28	33	39	45
Beans	15	21	16	12	23	21
All other	197	264	265	346	127	57
Total outbound	555	690	981	1,253	835	950
INBOUND						
Molasses	13	0	14	10	37	40
Fertilizer	0	0	0	1	8	26
All other	11	19	14	22	16	14
Total inbound	24	19	28	33	61	80
Total traffic	579	709	1,009	1,286	896	1,030

Selection of commodities for special consideration

The commodities listed in table II were selected for special consideration becauce total Central Valley ocean traffic represents nothing more than the sum of the tonnages of individual commodities, and the nine listed are by far the most important items. The other commodities which have been shipped and received through the port of

Stockton and, by shallow-draft vessels, through the port of Sacramento were also examined for promising future tonnage. Chambers of commerce and port officials were canvassed for other suggestions of commodities. However, none qualified for individual attention to the extent of the nine listed, so they were included in the group considered as all other. The 10th most important commodity at Stockton in 1955 was ammonium sulfate, which constituted a total of only 6,000 tons.

The balance of this section describes the assumptions made in the commodity analysis which applied generally to all commodities. Then a résumé of the analysis of each of the commodities listed separately in table II is presented.

General assumptions in the commodity analysis

In the analysis of the important commodities, and of the other commodities as well, it was apparent that large-scale changes in international relations or the domestic economy would have far-reaching effects on commodity movements beyond the scope of this study. Accordingly, some assumptions were made for general application throughout the analysis, as follows:

1. No war or depression will occur during the 10-year period under study.

2. The economy of the Central Valley will remain primarily agricultural but with a continuing upward trend in population, industry, and commerce. This will not necessarily mean an increase in ocean traffic. For instance, figure 5 shows a 60-percent decline in northern California ocean tonnage from 1925 to 1954. During the same period, northern California population increased by about 130 percent.

3. Agricultural surpluses will be reduced greatly by Government action, but aid will continue to be given farmers in disposing of crops which they have produced.

4. The status quo of world markets will be maintained, except that, (a) there will be continuing improvement in the ability of Europe to buy, and (b) there will be further reductions in Japanese purchases because of a dollar shortage. It must be assumed that the unsettled conditions in the Far East will remain as at present, but it is apparent that increased trade between Japan and China would greatly affect Central Valley exports.

Summary of commodities comprising Central Valley ocean traffic

Bulk Minerals

Iron ore has become the principal commodity shipped from the port of Stockton, amounting to 235,000 tons or 25 percent of total 1955 shipments. Coal is also shipped in large quantities from the port of Stockton, totaling 48,000 tons in 1935. Other bulk minerals have included petroleum coke and magnesite clinkers.

Iron ore shipments originate in Nevada where an industry developed in 1951 to supply Japanese mills. Production exceeded a million tons in 1952, dropped in 1953 through 1955, but may be up to 700,000 tons or more in 1956. The deposits now being mined and those which give promise of future supplies are near railroads which serve Stockton.

Coal shipments originate in Utah and Colorado, petroleum coke shipments near Santa Maria, Calif. Coal is shipped to Korea for the United States Navy. Petroleum coke is shipped to Japan, Korea, and Formosa.

Special handling facilities for bulk minerals were constructed at the port of Stockton in 1952, which gives this port a great advantage over others. The facilities are owned by the Stockton Bulk Terminal Corp., a stock company in which the principal shippers and some carriers have substantial financial investment. Table III shows iron-ore shipments from northern California ports for 1948–54 and demonstrates the dominance which the port of Stockton has achieved.

Continued shipments of iron ore through northern California ports are dependent on a continued demand from Japan, continued ability to pay, and the competitive position of other suppliers.

The need for iron ore should continue to grow in Japan with expansion of its steel-production capacity. The capacity forecast for 1960 is 9,900,000 metric tons, up 17 percent from 1954 production, and the long-term policy of the heavy-industry bureau is to increase production by 2 percent per year for the next 20 years. The allocation of dollars for iron ore may be expected because of its importance to heavy industry.

The principal sources of iron ore for Japan are the Philippine Islands, Malaya, and India. Increases in production are anticipated but have not always developed according to plans. If iron ore from China becomes available again, purchases of American ore may be eliminated, but no change in the status quo has been assumed.

The amount of iron ore which Japan will continue to buy from the United States is very doubtful, but continuation of purchases in amounts sufficient to keep this source of supply open—not less than 100,000 tons per year—may be expected. Shipments may total more than 700,000 tons in 1956, but unofficial estimates indicate a reduction to 300,000 tons in 1960.

TABLE III.—*Iron ore shipments from Northern California ports, 1948–54*

[Thousands of tons]

Port	1948	1949	1950	1951	1952	1953	1954
Stockton	0	0	0	0	193	282	179
Richmond	0	0	0	223	604	98	8
Oakland	0	1	0	62	85	0	0
San Francisco	0	0	1	0	10	0	0
Total	0	1	1	285	892	380	187

Source: Department of the Army, Corps of Engineers Annual Reports.

Shipments of coal to Korea should diminish, but a steady volume of petroleum coke at 30 to 40 thousand tons annually is expected.

Because of its loading facilities, Stockton should handle almost all northern California shipments of bulk minerals, including about 670,000 tons in 1956. The projected tonnages of iron ore and similar bulk minerals for the port of Stockton, as shown in figure 6, are as follows:

Port and thousands of tons projected

Stockton:

1955	283
1960	335
1965	135

Rice

Prior to World War II, California produced about 200,000 tons of rough, short-grain rice per year, and during postwar years annual production has been 2 to 3 times prewar levels. Rice will continue to be a major product of California agriculture during the decade under study. California rice production since 1913 is shown in figure 7.

California rice shipments originate at rice mills, which are not necessarily located within rice-growing areas. California rice-growing acreage and milling capacity are distributed as follows:

Area	Percent of State growing acreage	Percent of State milling capacity
San Francisco Bay area	0	20
Sacramento Valley	80	75
San Joaquin Valley	20	5

No change is anticipated in this distribution during the coming decade. Each milling area contributes to the ocean movement of California rice about in proportion to its percentage of total capacity.

The principal markets for California rice have been in exports to Japan and Cuba and in domestic shipments to Puerto Rico, continental United States, Guam, and Hawaii.

Currently, California rice moves to market via the following modes of transportation:

Mode of transportation and percent of total California rice movement

Water:

San Francisco Bay ports	34
Port of Stockton	44
Rail and truck	22

The destinations of rice movements through the port of Stockton during crop years ending September 30 were as follows:

[Thousands of tons]

Destination	1951	1954	1955
Japan	26.3	135.2	106.4
Puerto Rico	.0	23.0	77.8
Others	2.1	5.5	9.9
Total	28.4	163.7	194.1

During the year ending September 30, 1955, the port of Stockton handled about 55 percent of all California rice moving to Japan and about 82 percent of all California rice moving to Puerto Rico.

The projected volume of rice movement by water from California is dependent on the demand of the markets served and on the amount of rice which California farmers will be permitted to produce. A relatively fixed domestic market is indicated, but the Japanese market will probably decline very rapidly.

The Puerto Rican market, a major destination for rice moving through the port of Stockton, appears to be declining substantially. Rice movements to Hawaii are also decreasing. This study assumes that these declines will be offset by increased demand in Guam and the United States during the decade under study.

Although the Japanese prefer California short-grain rice to most other varieties of rice obtainable in the international market, a severe dollar shortage is forcing Japan to buy rice in other countries and to augment rice rations with barley and wheat. In addition, the United States Government controls over rice acreage indicate a steady reduction in the quantity of California rice available for export. The Japanese lack of dollars and the decreasing supply of exportable California rice should tend to reduce the movement of California rice to Japan. Eventually, this Japan movement may be halted entirely. For estimating purposes, this study assumes that rice exports to Japan from California will decline steadily, halting completely by 1965.

In recent years almost all rice moving through the port of Stockton, which amounts to more than half of the State total moving by water, originated at Sacramento Valley mills located at West Sacramento and Woodland. Therefore a deep-water port in the Central Valley at Sacramento would cause a sharp drop in the volume of rice moving through the port of Stockton, regardless of the total demand for California rice. Large amounts of Sacramento rice are also shipped through San Francisco Bay ports, and much of this tonnage would be gained by a deep-water port at Sacramento.

The future demand for California rice indicates that, if Stockton remains the only Central Valley deep-water port, about 130,000 tons of rice may move through the port of Stockton in 1960 and about 55,000 tons in 1965. If a deep-water port at Sacramento

becomes operable by 1960, the port of Stockton would handle only about 5,000 tons of rice in 1960 and less than 2,500 tons in 1965. These values, along with the projected tonnages of rice moved through a port at Sacramento, are as follows:

[Thousands of tons]

	1955	Projected	
		1960	1965
1 port: Stockton	189	130	55
2 ports:			
Stockton		5	(1)
Sacramento		165	90

[1] Less than 2,500 tons.

Figure 8 illustrates these projected rice movements through the port of Stockton and the approximate effects of the declining Japanese and Puerto Rican markets.

Canned Foods

California accounts for about one-fifth of United States production of canned foods, and since 1949 California production has averaged 2,402,000 tons per year. Northern California canneries are estimated to produce 92 percent of all California canned foods and southern California canneries 8 percent. The table below shows distribution of production among the northern California canning areas:

Canning area	Percent of California production	Percent of northern California production
Coastal area	57	62
Central Valley	35	38
San Joaquin Valley	20	22
Sacramento Valley	15	16
Total	92	100

No major changes in location or size of production areas are expected within the coming decade, and both domestic and foreign markets are expanding for California canned foods.

Since 1949, water shipments of California canned foods to domestic and foreign markets have averaged 25 percent of the total amount available for distribution. Out-of-State domestic markets have consumed 18 percent and exports 7 percent. In 1954, ocean shipments from California to domestic markets amounted to 519,000 tons and to foreign markets 203,000 tons.

The port of Stockton plays an important role in the water movement of canned foods from California to all markets. In 1954, Stockton shipped 194,000 tons of canned foods. Of this tonnage, 168,000 tons went to domestic markets, or about one-third of all California ocean tonnage of canned foods moving to domestic markets. In 1954, the port of Stockton shipped 26,000 tons of canned foods to foreign markets, or about one-eighth of the California export tonnage of canned foods.

It is estimated that if Stockton remains the only deepwater port in the Central Valley, about 209,000 tons of canned foods will be moved through the port of Stockton during 1960 and about 252,000 tons in 1965. If a deepwater port at Sacramento becomes operable by 1960, about 161,000 tons of canned foods may be moved through the port of Stockton that year and about 194,000 tons during 1965. These tonnages, along with projected movements through a deepwater port at Sacramento, rounded to the nearest 5,000 tons, are as follows:

[Thousands of tons]

	1955	Projected	
		1960	1965
1 port: Stockton	185	210	250
2 ports:			
Stockton		160	195
Sacramento		115	140

The values in this projection, along with previous tonnage through the port of Stockton, are shown in figure 9. The table above shows that if a second deep water port in the Central Valley is operable at Sacramento by 1960, the port of Stockton may lose about 50,000 tons of canned foods cargo to Sacramento in 1960 and about 55,000 tons in 1965.

Barley

Barley production in California has nearly doubled since before World War II. In the late 1930's barley production was about 700,000 to 800,000 tons per year. Since 1950, production has averaged 1,370,000 tons per year.

The Central Valley produced about 80 percent of California barley in 1954. In that year the San Joaquin Valley produced about two-thirds of Central Valley barley and the Sacramento Valley about one-third. Figure 10 shows recent gains made by the San Joaquin Valley as a major barley production area in the State. These gains were caused by a shift from cotton and wheat to barley and by an increasing demand for farm-animal feed.

Barley moving into foreign channels from California has been destined primarily for Japan and Korea, but Japan is by far the more important customer. In 1955 Japan purchased 177,000 tons of California barley or 74 percent of all barley exported. Beginning in 1950, Japanese purchases have averaged 156,000 tons per year except in 1951 when an unusually large barley movement from California to Japan resulted from increased Japanese buying power because of the Korean conflict and, coincidentally, poor crops in Japan. In 1955 barley exports from California to all other countries besides Japan amounted to 63,000 tons, or 26 percent of total barley exports. Beginning in 1950 exports to countries other than Japan and Korea have averaged 32,000 tons per year. Exports to Korea have been Government-sponsored for war relief.

The only domestic market for California barley served by water is Hawaii. Barley shipments to Hawaii have averaged 11,000 tons per year beginning in 1949. This barley is rolled barley, shipped in bags, and used primarily for chicken feed.

The Commodity Credit Corporation controls the export of barley from California ports. Government policy requires that bulk grain handling facilities be available at several locations in northern California for use when emergency shipments are required. This study assumes that barley shipments will originate at California ports as follows: With only 1 deep water port in the Central Valley (the port of Stockton), San Francisco and Oakland will handle 30 percent of total barley shipments and the port of Stockton 70 percent; and with 2 deep-water ports in the Central Valley (Stockton and Sacramento), San Francisco and Oakland would continue to handle 30 percent of total barley shipments, Stockton and Sacramento 35 percent each.

Factors affecting the outlook for ocean shipments of California barley are the discontinuance of war-relief shipments continued Government control of export movements, and expanding production in the Pacific Northwest. Based on application of those factors, it is estimated that ocean shipments of barley from California will average 199,000 tons in 1960 and 1965, which includes 156,000 tons to Japan for each year, 32,000 tons to all other export markets, and 11,000 tons to Hawaii.

When the movement pattern for barley through northern California ports is applied to the estimated shipping volumes for 1960 and 1965, with and without a deep-water port at Sacramento, the projected barley shipments are as follows:

[Thousands of tons]

	1955	Projected	
		1960	1965
1 port: Stockton	101	140	140
2 ports:			
Stockton		70	70
Sacramento		70	70
Total		140	140

Dried fruit

Many varieties of dried fruit are produced in the Central Valley, but only raisins and prunes are shipped in large tonnages. Because almost all prunes are packed in San Leandor and the vicinity of San Jose, only small shipments are made through the port of Stockton; this tonnage was regarded as insignificant.

Almost all raisins are produced and packed near Fresno. Raisin-variety-grape acreage and recent plantings indicate a slight increase in acreage in recent years and the probability of about a 1-percent per year increase.

About two-thirds of raisin shipments are to domestic and Canadian markets, the balance to foreign countries. The domestic market has remained unchanged for the last 4 years. The export market has changed radically from year to year, depending largely on subsidized shipments. The United Kingdom has provided the largest foreign market for California raisins, but in the crop year 1950–51 this country bought less than one-half ton. Competition is being felt in foreign markets from other producing countries. The California share of prewar world production was 50 percent, but it dropped to 43 percent in 1953 and 36 percent in 1954.

The port of Stockton is the principal raisin shipping port because of favorable truck and rail rates from Fresno. About 75 percent of exports and 90 percent of domestic ocean shipments are handled through Stockton. No raisin shipments would be expected to move through a deep-water port at Sacramento.

Future ocean shipments of raisins may vary widely because they are dependent on raisin production and domestic and foreign demand. Raisin production fluctuates from year to year, depending on the amount of the total raisin-variety grape crop used as fresh grapes for wine and for raisins. However, over a long period of time the increased acreage of raisin-variety grapes should result in a gradual increase in raisin production.

Domestic demand has been unchanging and is not expected to increase greatly. However, the tonnage of shipments through Stockton has increased steadily, and the projected tonnage for 1960 and 1965 reflects a partial continuation of this trend. Export volume appears to have leveled off, and foreign competition has increased, so that no gain over the average export tonnage for the last 3 years is projected. Figure 12 shows dried-fruit shipments through the port of Stockton from 1950 through 1955 and the following projected tonnages for 1960 and 1965, with totals rounded to the nearest 5,000 tons.

[Thousands of tons]

Shipments	1955	Projected	
		1960	1965
Exports	37	47	47
Domestic shipments	32	36	40
Total	69	85	85

Wines

California accounts for more than 80 percent of total United States wine production. About 78 percent of California wine is produced in the Central Valley, and about 70 percent of out-of-State shipments originate there. (See fig. 13.) No significant change in production patterns is anticipated.

Shipments of California wines out of the State were approximately as follows in 1954:

[Thousands of tons]

	Bulk (packaged basis)	Packaged
Rail shipments	473	158
Water shipments:		
Via Stockton	0	39
Via Bay area ports	0	25
Via other ports	0	6
Total	473	228

The markets served by water are the east-coast States. These are also served by rail. In 1954, shipments to these States by water accounted for 11 percent of the total, rail for 89 percent.

Water shipments of packaged wine are expected to drop sharply in the first part of the decade under study. Most packaged wine now shipped by water will be moved in bulk by rail to eastern bottling plants, according to the immediate plans of major wine producers. The total wine movement in bulk by rail should increase from 89 to about 99 percent of the total, while the movement of packaged wine by water should decline 90 percent, from 11 to about 1 percent of the total.

The effects of this change in shipping practices and of other factors are shown in the following projection of packaged wine shipments:

[Thousands of tons]

	1955	Projected	
		1960	1965
1 port: Stockton	45	10	5
2 ports:			
Stockton	-------	10	5
Sacramento	-------	0	0

Beans

Dry, edible bean shipments through the port of Stockton have totaled from 12 to 22 thousand tons annually during the last 6 years. San Francisco Bay ports have also shipped large quantities of beans grown in the Sacramento Valley and the coastal counties.

Bean production in the Sacramento Valley in 1955 was 45,000 tons, of which 19,000 tons were pinks. Production in the San Joaquin Valley was 51,000 tons, of which 24,000 tons were blackeyes.

The principal market for Central Valley beans is Puerto Rico, which buys mostly pinks. Smaller shipments are made to Cuba (small reds) and the east coast (blackeyes and baby limas). A moderate increase in shipments to these destinations is anticipated. Large shipments of baby limas have been made in the past to Europe and the Far East from Commodity Credit Corporation stocks, but there is no indication that these shipments will continue after 1956.

Because of the location of pink bean production in the Sacramento Valley, from which most ocean shipments originate, it would be expected that a deepwater port at Sacramento would handle almost all bean shipments from northern California. The tonnages projected for 1960 and 1965, as shown in figure 15, rounded to the nearest 5,000 tons, are as follows:

[Thousands of tons]

	1955	Projected	
		1960	1965
1 port: Stockton	21	15	20
2 ports:			
Stockton	-------	(1)	(1)
Sacramento	-------	15	20

[1] Less than 2,500 tons.

All other outbound traffic

All other outbound commodities include (1) those items other than bulk minerals, rice, canned foods, barley, dried fruit, packaged wine, and beans which in the past have been a part of the total commercial ocean traffic emanating from the Central Valley, (2) military cargo, and (3) any item of new commercial cargo.

Over 50 commodities have been studied as other outbound cargo. These commodities were determined by reviewing port records and by discussions with port officials and chambers of commerce. During the last 6 years, commodities classed as other outbound through the port of Stockton have averaged less than 5 percent of the total port tonnage.

Several factors were considered in developing tonnage projections for other outbound commodities: trends in total tonnage of ocean shipments from northern California; population growth in northern California; trends in the volume of other outbound commercial traffic through the port of Stockton; sources of undeveloped or new commercial traffic; and likely tonnages of military cargo.

The population of northern California has more than doubled in the last 30 years, but total outbound ocean tonnage in 1954 was only 69 percent of 1925 tonnage. This decrease results from a sharp drop in domestic shipments which has not been offset by the slightly rising trend in exports from northern California.

However, the outbound volume of all dry cargo from the port of Stockton has been increasing, and the tonnage of other outbound commodities is expected to increase also. This other outbound volume has averaged 37,000 tons per year and has been projected to reach 44,000 tons by 1960 and 43,000 tons by 1965 for the port of Stockton. An equal tonnage is estimated for a deepwater port at Sacramento.

A major source of undeveloped commercial traffic is new industry locating in the Central Valley. No facts concerning raw materials, products, and markets of new industry are known at this time. New industry will not necessarily affect ocean traffic outbound from the Central Valley; so its influence is disregarded in this study.

A new item of commercial traffic, the nature of which cannot now be revealed for proprietary reasons, is expected to produce 40,000 tons per year through the port of Stockton early in the coming decade. A deepwater port at Sacramento would not share in this new movement.

Outbound military traffic from the port of Stockton is expected to average 42,000 tons per year in 1960 and 1965. Outbound military traffic from a deepwater port at Sacramento would be expected to average 14,000 tons per year in 1960 and 1965.

Other outbound tonnages, with and without a deepwater port at Sacramento, are summarized as follows, rounded to the nearest 5,000 tons.

[Thousands of tons]

	1955	Projected	
		1960	1965
1 port: Stockton	57	125	130
2 ports:			
Stockton	-------	125	130
Sacramento	-------	60	60

Molasses

Blackstrap feed molasses is received at the port of Stockton from Hawaii, the Philippine Islands, and Formosa. It is used in animal feeds, particularly those for dairy cows and for stock in feed lots.

Feed molasses from the Philippines and Formosa is delivered by ocean vessels, that from Hawaii either by ocean vessel or barge. In the last 2 years, 38 percent of total receipts has been delivered by ocean vessel. Feed molasses is also delivered to the Central Valley by tank truck from Richmond.

Consumption of feed molasses in the San Joaquin Valley should be about four times that in the Sacramento Valley, based both on the number of dairy cows and the number of stock in feed lots.

Receipts of molasses at Stockton have increased about tenfold in the last 8 years, and no reduction in demand is anticipated. However, an adequate supply from cane sugar refineries may not be available—as indicated by the leveling off of total northern California receipts from 1953 to 1954—so only a moderate increase in Stockton receipts can be projected.

The tonnages projected for 1960 and 1965, with and without a deep water port at Sacramento, along with actual receipts at Stockton and northern California ports, are shown in figure 16. The projected tonanges, rounded to the nearest 5,000 tons, are as follows:

[Thousands of tons]

	1955	Projected	
		1960	1965
1 port: Stockton	40	45	45
2 ports:			
Stockton	-------	35	40
Sacramento	-------	10	10

Fertilizer

Receipts of nitrogenous fertilizer from Norway have increased sharply at the port of Stockton in the last 3 years to more than 25,000 tons in 1955.

Most of the fertilizer is calcium nitrate, and the balance is urea. Calcium nitrate is in particular demand in the citrus region southeast of Fresno, urea in Sacramento Valley rice-growing regions.

The demand for fertilizers will probably increase. However, west coast production of urea is planned in plants at Ventura and in Washington, so that heavy competition will face imported fertilizers.

Because of domestic competition, no increase is anticipated over 1955 receipts. The Sacramento Valley is estimated to consume 30 percent of present receipts; so if a deepwater port is available there it would presumably receive that share of the imports. The projected tonnages for Central Valley ports for 1960 and 1965, with and without a deep-water port at Sacramento, are shown in figure 17. The projected tonnages, rounded to the nearest 5,000 tons, are as follows:

[Thousands of tons]

	1955	Projected	
		1960	1965
1 port: Stockton	26	25	25
2 ports:			
Stockton		20	20
Sacramento		10	10

All other inbound traffic

In the same manner as for all other outbound traffic, the trends in receipts of all other inbound commodities at Stockton and northern California ports were studied, and the commodities which might contribute to future traffic were reviewed. Imports received at northern California ports have maintained a fairly constant volume since before World War II, but domestic receipts (noncontiguous, coastwise, and intercoastal) have dropped to about one-eighth their prewar level.

Three categories of all other inbound traffic were considered: military cargo, other miscellaneous commodities, and other commodities which may provide future tonnage but which cannot be specifically anticipated at present.

It was concluded that military cargo would amount to about 2,000 tons per year for any Central Valley port, and that the average receipts of other miscellaneous commodities at the port of Stockton during the last 5 years—15,000 tons—would be representative of future receipts at Stockholm and at a deepwater port at Sacramento.

In order to take into account other commodities which may provide future tonnage, commodities which are now considered important receipts at the port of Stockton were reviewed and compared with those of 5 years previous. From this review it was indicated that fertilizer might have been disregarded in a projection made prior to 1952; so in order to take such unanticipated commodities into account, an allowance equal to that for fertilizer was included for each future 5-year period.

The projected tonnages for 1960 and 1965, with and without a deepwater port at Sacramento, are as follows:

[Thousands of tons]

	1955	Projected	
		1960	1965
1 port: Stockton	14	45	70
2 ports:			
Stockton		35	55
Sacramento		25	35

Juniors Voice Their Opinions

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MINSHALL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 29, 1956

Mr. MINSHALL. Mr. Speaker, under leave to extend my remarks, I wish to include the following letter received from the social studies class of the Shaker Heights (Ohio) Junior High School in response to an opinion poll which I conducted among the residents of the 23d Congressional District:

SHAKER HEIGHTS JUNIOR HIGH SCHOOL,
Cleveland, Ohio, March 15, 1956.

Hon. WILLIAM E. MINSHALL,
House of Representatives Office Building, Washington, D. C.

DEAR SIR: As a teacher of social studies here at Shaker Junior High, I took the liberty of using your recent questionnaire in my classes. We have discussed 5 of the issues in class, and have also been talking about the Congress; so when your questionnaire came to my attention, I thought it would fit in very well.

The youngsters answered these questions anonymously, and I suggested that they not answer questions about which they had no opinion. I thought you might be interested in the results, so I am enclosing the tally. I felt the results were quite interesting.

Thank you very much for your attention to my little experiment.

Sincerely,

BESSIE M. WYOTT,
Teacher, Social Studies.

The questionnaire referred to in the letter follows:

1. Regard the Nation's fiscal policy, check one:
   - (a) Balance the budget and reduce national debt before granting any tax reductions ---- 55
   - (b) Reduce taxes before budget is balanced ---- 28
2. Regarding a reduction in taxes, check one:
   - (a) Across the board reduction for individual taxes only ---- 30
   - (b) Reduction for both individual and business ---- 50
   - (c) Reduction for low-income groups only ---- 34
3. Regarding foreign aid, check one:
   - (a) Favor President's program expected to be $4.8 billion for next fiscal year starting July 1, 1956 ---- 76
   - (b) Favor a reduction in President's program ---- 29
   - (c) Oppose all financial aid to foreign countries ---- 3
4. Regarding Federal aid for local schoolroom construction, check one:
   - (a) A 5-year program to assist local school systems who are attempting to meet their local classroom shortage but who require additional funds ---- ---
   - (b) A 5-year Federal-aid program with funds to be distributed to local school systems in proportion to their individual enrollments regardless of whether there is local financial participation ---- ---
   - (c) Oppose any Federal aid to local school systems ---- ---
5. Regarding the proposed 40,000-mile interstate highway system, check one:
   - (a) Approve such a highway program and pay for it by issuing Government bonds ---- 21
   - (b) Approve such a highway program and pay for it by increasing the highway user's tax; i. e., gas tax, rubber tax, etc ---- 6
   - (c) Approve such a highway program and finance it with a combination of a and b ---- 58
   - (d) Oppose any new Federal interstate highway program ---- 5
   - (e) Build a toll road ---- 33
6. Regarding the annual Post Office Department deficit of one-half billion dollars, check one:
   - (a) Increase postage rates to make the Department self-sufficient ---- ---
   - (b) Maintain existing postage rates and accept the deficit as a normal cost of an essential governmental service ---- ---
7. Regarding agricultural policy, check one:

Communist Escapees Are Tasting Freedom and Returning Home—Why?

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 28, 1956

Mr. THOMPSON of New Jersey. Mr. Speaker, most Americans have been unaware of a type of Communist activity which has been successful far beyond the belief of the average citizen in a democratic country. During the 13 months ending January 31, 1956, more than 1,000 persons who had originally sought refuge from communism in the West voluntarily returned behind the Iron Curtain. These redefections show the astounding success which the shrewd and persistent Communist apparatus in Western Europe and the United States has had in seeking out refugees from Eastern Europe and playing upon their economic and social difficulties to induce them to return to their former homes.

An article from the New York Times of March 28, which I shall include with my remarks, underscores the jolting defeats which Communist propaganda has been dealing the democracies on this score and also enumerates countermeasures suggested by a commission of the International Rescue Committee under Gen. William J. Donovan. The Departments of State and Justice should consider these proposals, and the Members of Congress should give serious thought to easing immigration barriers for refugees from Eastern Europe in order to diminish the despair that overtakes occupants of dismal refugee camps in Western Germany. In a letter to the President, the American Council of Voluntary Agencies for Foreign Service, Inc., which comprises the religious, nationality and welfare agencies most active in refugee work, has recommended that our basic immigration law be amended to take care of escapees from behind the Iron Curtain after the expiration of the present Refugee Relief Act of 1953. The same letter, signed by Monsignor Swanstrom of the National Catholic Welfare Conference on February 16, 1956, recommends the cancellation of the mortgage on quotas for Eastern European countries occasioned by the Displaced Persons Act of 1948. Such action would be of "value in the future, particularly for persons fleeing from Iron Curtain countries, the letter said.

The full text of the letter is printed in the RECORD of March 27, 1956, page A2709.

It is immensely important to the Communist propaganda machine whenever a single one of the escapees elects to return to communism after tasting life in a democracy. The event is exploited as a crushing indictment of the democratic system. In reality, such events are indictments of the democracies for failure to provide the escapees with a full diet of the democratic life, sufficient to eradicate their loneliness, frustration, or remorse after choosing freedom. It is time that our citizens and our Government recognize that escapees are prize exhibits in the ideological struggle between two antithetical systems of government. The actions proposed in the following article are to my mind most important:

RUSSIA COMBATS REFUGEE FLIGHTS BY INTENSIVE COME-HOME DRIVE—SURVEY SHOWS EFFORT GAINING FORCE—GUILE AND FEAR ARE EFFECTIVE, DONOVAN SAYS

(By David Anderson)

The Soviet Union is engaged in a successful campaign to induce, through guile or fear, the return of those who have sought a sanctuary in the free world. This was reported yesterday in a study made by the International Rescue Committee.

Liberally financed and well coordinated, the Communist effort became increasingly effective a year ago and reached a peak last January. It is geared to operate at long range, both with respect to geography and time.

In the 13 months that ended January 31, 1,158 persons returned behind the Iron Curtain. However, the true purpose of Moscow is seen to lie beyond these modest statistics. It is to break the back of resistance movements represented by refugee concentrations and to discourage and destroy the temptation others may have to escape.

William J. Donovan, wartime head of the Office of Strategic Services, made public the report, which was compiled by an emergency commission of the International Rescue Committee, 62 West 45th Street. The commission visited France, Austria, Switzerland, and Germany in the last 2 months and received information on Communist repatriation drives in Belgium, Sweden, Italy, Greece, Turkey, and South America.

Serving with him were Angier Biddle Duke, president of the Rescue Committee; Leo Cherne, executive director, Research Institute of America; Irving Brown, A. F. L. and C. I. O. liaison officer in Europe; Joseph Buttinger, a political analyst and author; Clairborne Pell, director, Bell News Corp.; Herman W. Steinkraus, president, Bridgeport Brass Co.; William Vanden Heuvel, a lawyer, and Richard R. Salzmann, vice president of the Rescue Committee.

"One of the most incredible aspects of this redefection campaign has been the extent of its impact on the refugee in this country," Mr. Donovan said. "To the escapee from home, America is synonymous with security. A visit or a phone call from a Communist agent strikes with extraordinary shock.

"There are numerous cases where individuals have been located despite determined efforts to isolate themselves by changing their names or living at undisclosed addresses."

In New York during January alone, it was learned, Soviet agents made at least sixty contacts with refugees. They have been known to hound escaped persons for months, employing every weapon at their disposal save abduction and murder. The Come-Home-or-Die technique is being applied with increasing frequency in the Berlin and Munich areas.

Why would anyone leave the United States for, say Poland today? Mr. Cherne said the reasons were: genuine fear, nostalgia in moments of depression, economic insecurity, and the threat that one's family would become hostages.

"Come Home" committees have been established in the various satellite countries. The newspapers and pamphlets they publish are widely circulated in Europe and the United States, the Commission reported.

Sentimental chain letters and personal notes play important roles in the Communist bombardment of refugees. Of late, recorded radio appeals have been broadcast from East Berlin. The urge to listen was found to be practically irresistible.

The Commission has submitted five general recommendations for consideration by governments and private agencies that are anxious to counteract the Communist offense and thus restore confidence among refugees. These are:

1. A major effort should be made to arouse the free world to the real danger posed by the redefection campaign.

2. It is in the United States' own interest to expand its cooperation with other nations, especially those of first asylum in Western Europe.

3. First priority should be given to speeding the processing of refugee and escapee masses.

4. A need exists for a program to strengthen the morale among refugees and to provide a followup counseling period of a year.

5. Special provision should be made for the care of old, ill or incapacitated refugees incapable of becoming self-sufficient. The United States should admit a limited number of such persons over and above present immigration provisions.

The Commission also proposed steps for action on specific problems. Typical of these problems is that of the refugee who finds himself in this country. The report notes that he is vulnerable to Communists agents for many reasons, including the following:

"He is profoundly shocked that residence here does not make him immune to Red pressure. Often he is totally unaware of existing legal, phychological and financial facilities. Such a man is often lonesome and worried by emotional problems irritated and enlarged by Communist publicity from his homeland.

"Our free-wheeling, richly diverse, democratic society is hard to adjust to. Citizenship seems distant. The refugee community here is susceptible to rumor, with the result they often succeed in frightening themselves as much as they are frightened by the Communists."

The Commission suggests, among other solutions, a soothing, reassuring step by President Eisenhower. Government departments such as Health, Welfare and Education, Interior, Justice, and State could offer the refugee advice and assistance. Communities could organize panels of doctors or lawyers. The service clubs could help.

"Humanitarian reaction is naturally aroused by the sinister implications of the Communst redefection effort," the report said. "But there are political and economic overtones which must be met with directness and firmness."

Prosperity—Republican Style

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 28, 1956

Mr. MULTER. Mr. Speaker, permit me to direct the attention of our colleagues to the following editorial by Mr. Leslie Gould on the subject of inflation which appeared in the New York Journal-American for March 23, 1956:

FREIGHT, PAY, AND INTEREST HIKES SPELL INFLATION

(By Leslie Gould)

A new inflationary spiral is gaining momentum, so it is going to cost more to live.

Almost everything the family buys will cost more as a result of increases already announced or soon to be for many basic products. New housing will cost more. Also clothing and certain food items. Even a new family Bible is more expensive—$1.50 more for a de luxe edition.

The main factors in the inflation are the higher freight rates, wage increases, and the tight money bringing higher interest costs.

There are some exceptions to the higher trend, like meats, so the food budget may show a smaller rise.

There are black markets. Newsprint hiked to $130 a ton under the regular contracts is now $217.50 to $220 a ton in the gray market against $180 to $200 the first of the year. Nickel, officially quoted 64½ cents a pound, is bringing $3 in the black market against $1 to $1.50 a year ago.

Here are some of the increases:

Railroad freight rates 6 percent, for an added annual cost to shippers of $400 million. Truckers have applications in for a 7-percent boost, and lines in New England have gotten a 6-percent increase and a Kansas City line 7 percent. Great Lakes shipping is 6 percent higher.

LUMBER UP $5

Interest rates—for bank loans, mortgages, and bonds—are as much as a full 1 percent higher.

Lumber up 5 to 10 percent, with 2-by-4's selling at $80 a thousand board feet, a $5 rise.

Copper is costing 49 cents a pound, against 46 cents recently.

Shoes are marked up 4 to 5 percent on top of a 50-cent to $1 increase last fall. Hide prices at 17 cents represent a 2-cent-a-pound rise in recent weeks to the highest level in 2 years.

Can containers 3 percent following a 5-percent boost in tinplate. Paper-board containers up 4 percent or about $5 a ton. Both will be reflected in food prices.

Men's clothing and accessories have just been increased at the wholesale level.

STEEL AWAITS WAGE PARLEYS

The steel industry is waiting on the results of the coming wage negotiations before changing prices upward.

Paint is going to cost more as the materials are up 25 cents a gallon, plus the higher cost of tinplate, freight, and labor.

Nylon yarns have been cut 10 to 22 percent and dacron 14 to 30 percent, but these savings for the average consumer will be lost in higher costs of the converters.

In addition to their just won freight rate increases, the railroads are seeking to lift passenger fares by 5 percent.

It all adds up to a higher cost of living, the first real change after more than 2 years of stable prices.

Archbishop Cushing Pleads for Tolerance

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 29, 1956

Mr. BOLAND. Mr. Speaker, under unanimous consent, I include in the

RECORD the Easter message of one of America's most beloved and distinguished leaders of the Catholic Church, Archbishop Richard J. Cushing, of Boston:

ARCHBISHOP CUSHING HITS RACE BIAS—URGES HOLY WEEK BE KEPT FREE OF STAIN

Archbishop Cushing declared yesterday that the sacred time of Holy Week should not be stained with racial intolerance in any part of our Nation or with any bitterness between neighbor and neighbor.

The archbishop's appeal followed a recent statement by directors of the Massachusetts Council of Churches calling for a militant program of education toward elimination of racial segregation. The council, representing 11 Protestant denominations, urged establishment of full equality for all our people.

SPECIAL MESSAGE

During the next few days the entire Christion world commemorates in solemn fashion the suffering and death of our Divine Savior. Hundreds of millions of peoples will climb again in spirit the dread hill of Calvary where the God-man poured out in abundance. His precious blood for the redemption of men. In the midst of these days of special supplication I wish to commend to your particular meditation the universal nature of Christ's redemptive act for humankind.

The outstretched arms of Christ on the Cross should remind us that he embraced the whole world: "Thou wast slain in sacrifice; out of every tribe, every language, every people, every nation thou hast ransomed us with thy blood and given us to God" (Apocalypse 5 : 9). He Himself set no limits, save the boundaries of the world, for the work of His salvation—"Go into the whole world and preach the gospel to every creature * * *." (Matthew 15: 16). "Go ye therefore and teach all nations" (Matthew 28: 19).

And St. Paul reminded in unforgetable words the people of Galatia, "There is neither Jew nor Greek, there is neither bond nor free, there is neither male nor female. For you are all one in Christ Jesus" (Galatians 3: 28). Even while we contemplate this immense largesse by which God thus enfolded all mankind in His sacrificial depth, we cannot fail to see that even those who claim His name as their own have dared to narrow down the implications of His sufferings.

LET'S LOOK TO HOME

Nor must we look to other lands and other peoples to find those who in unworthy acts of discrimination attempt to set at naught the full meaning of Christ's redemption. Here in our own country, in north and south, east and west, men reject in varying degrees the just claims of their brothers to justice and equality. Whenever we thus cast aside the love of a brother, by that same gesture we have flung from ourselves the protecting claims of the fatherhood of God. The Christian must see Christ in every face: "I am the vine, you are the branches * * *" (John 15: 5). "As long as you did it to one of these My least brethren, you did it to Me" (Matthew 25: 40).

Whenever racial intolerance shows itself in any part of our Nation, whenever human hearts are turned in bitterness against their neighbors, whenever discrimination touches another with its acid sting—then is Christ crucified again and for some, at that moment He has died in vain. For those who call themselves Christian, these are moving reflections, especially at this season; they must surely have a grim meaning for all those who know themselves to have been washed in the blood of the lamb.

To be sure, the Lord understands the weakness of our ways and it is comforting to remember that His mercy is above all His gifts. And we know that it is not possible for us either in a single instant to rewrite the history of many decades in some unseemly display of excitement and zeal. A prudent concern for the general welfare of the community, however, does not suggest either temporizing or delay, it merely requires that among many paths open for action we take those which will be least violent and most effective. Difficult days like these are not times for the opportunist or the zealot; they need the patience and prudence of the thoughtful Christian who relentlessly but lovingly applies the words of Christ to the incidents of the contempary scene.

EXAMINE CONSCIENCE

I urge Catholics in the archdiocese to scan diligently their own consciences in order to scour from their souls any stain of acrimony toward their neighbors. At the same time their prayers should rise in petition to the Father of us all asking Him to sustain by His grace all those who have been placed in circumstances which can be so easily surrounded with misunderstanding and strife. May the Lord guide them by His inspiration so that they will stand firm where firmness is required, and yield where it is possible to yield; let no worldly purpose lead to a compromise of principle, and let no excess of zeal bring old fires to new flame.

Our prayers in a special manner include our brother bishops in the South who have shown themselves to be truly good shepherds guarding all the sheep of the flock entrusted to them. May God give them continuing guidance. As we enter the sacred triduum of Holy Week we must make our own the prayer of our Saviour, "That all may be one, as Thou Father in me and I in Thee; that they also may be one in us; that the world may know that Thou has sent me." (John, 17: 21.)

We're Here To Legislate, Not To Play Politics

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1956

Mr. SCHWENGEL. Mr. Speaker, as a freshman Member of Congress, I have often expressed pride in belonging to the greatest legislative body in the world. It will take more than a few disappointments and setbacks before I would abandon that pride. Some of the experiences over the past year, however, have given me cause to wonder if maybe we are not the greatest political body in the world, a designation which would give me much less cause for pride.

One instance of playing politics on a grand scale is evident in the way Congress has handled farm legislation.

In just 38 days it will be a year since the House passed H. R. 12. In this year, Congress has been in session approximately 6 months. Still we have no farm legislation. In fact, we seem farther away from any workable farm bill than ever before.

More is the pity because with the farm economy sagging through no fault of its own, government should take steps to help undue the causes for the farm crisis, most of them fashioned through Federal legislation.

On January 9, 1956, President Eisenhower brought to Congress, as the first item of business, a nine-point program which was hailed by farmers and leading farm organizations as being an instrument for soundness in agriculture.

It provided the way for farmers to adjust to a peacetime economy on a solid, businesslike basis and still be compensated for their efforts. Now, more than 2 months later, the legislation is still under consideration and we have no assurance of when it will be enacted. At the present, it has little prospect of emerging in any form which will reflect the element of statesmanship which Congress is obligated to endow to matters of this kind.

Surely, the farmer, who is fast approaching another planting season, should be free of the quandary in which Congress has placed him. He has no way of anticipating what type of program will be thrust upon him. He cannot plan in advance. He must follow the age-old requirement of keeping in step with nature by preparing the soil and planting the crops in season. It could be that these basics would be legislated from him, however, and he may be required to plant nothing, harvest nothing, and expect nothing. We have an obligation to ourselves no less than we do to all the people engaged in agriculture in this great land of ours. We are here to legislate, not to play politics.

I sincerely hope that, just because 16 of 19 members on the Agriculture Committee of one political faith come from areas where the major interest agriculturally does not fall within the realm where farmers are experiencing the greatest economic difficulty right now, there has not been a lack of interest in the real problem.

I join with other Members who feel that because we have dragged our feet and because we have played politics with the farmer's welfare, that we owe it to him to remain in session until farm legislation is enacted. None of us can enjoy an Easter recess with any peace of mind if we do otherwise.

Easter Seal Campaign: George Bonadio

EXTENSION OF REMARKS
OF
HON. SAMUEL N. FRIEDEL
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1956

Mr. FRIEDEL. Mr. Speaker, I would like to insert in the Appendix of the CONGRESSIONAL RECORD a recent newspaper article which calls attention to the fine work being done by a young student at the Drexel Institute of Technology, George Bonadio, son of Dorothy and Joseph Bonadio, of Baltimore. Young George heads a committee of students pledged to insure the success of Philadelphia's Easter seal campaign for crippled children.

In these days, when we read and hear so much about juvenile delinquency, it is

heartening to learn how much the young people of our country are actually doing in their effort to help those less fortunate.

The article follows:

TECH STUDENTS BACK EASTER SEAL DRIVE

With the annual Easter seal campaign for crippled children only 11 days away, Arthur C. Kaufmann, Philadelphia campaign chairman, has announced that Drexel students will play a large part in insuring the success of the campaign in this city.

BONADIO HEADS GROUP

Under the chairmanship of George Bonadio, students are being enlisted to stage lily parades throughout Philadelphia in various business districts on April 7. During the day the students will solicit contributions from the general public by means of coin cans, and in return will present each donor with a small paper lily, symbol of the campaign.

Already an active committee has been formed by Bonadio, which has pledged to enlist the aid of as many students as possible to participate in this effort on behalf of the crippled children in this area. Aim of the committee is to secure the help of every student for some phase of this giant undertaking.

SUPPORT AREA CRIPPLES

Funds raised through the Easter Seal Campaign in this area support the work of the Philadelphia Society for Crippled Children and Adults, Inc., in Bucks, Chester, Delaware, Montgomery, and Philadelphia Counties.

Among the many services which it provides are treatment centers in each of the five counties, a dental clinic, Camp Daddy Allen in the Poconos, a summer day camp at the George School in Newtown, and the Fuhrman Clinic School for Cerebral Palsied Children in Overbrook.

Byelorussian Independence Day, March 25

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1956

Mr. DINGELL. Mr. Speaker, to Americans perhaps the least known of all national and religious groups of the Soviet Union are the Byelorussians, or the White Russians, as they have been known to us in the West. There are many reasons for this, but the principal one is that during the last several hundred years Byelorussians have not been the real masters of their own destiny. Though they occupy a distinct area between historic Poland and Muscovite Russia and constitute a distinct national entity with their own tradition and culture, yet from the late 14th century until the partition of Poland late in the 18th century, the Byelorussians have been tossed between the Lithuanians, the Poles, and the Russians, and their historic homeland has been not only a field of strife among many rivals but also become the graveyard of many an ambitious and autocratic adventurer.

During all that time Byelorussians were the unfortunate victims of their unwanted and despised overlords. They were subjected to the harsh brutalities of innumerable alien tyrants, and they endured them all with exemplary fortitude and courage. Moreover, in the midst of indescribable tribulations and vicissitudes, they successfully maintained their distinct national traits, their language, and above all their love for independence and freedom.

Toward the end of the First World War, when the decrepit Russian regime was overthrown and the Tsar's empire crumbled, the Byelorussians saw their chance for their national freedom. Finally on March 25 of 1918 their leaders set up their own government and proclaimed the independence of the Byelorussian Democratic Republic.

The republic thus proclaimed and created did not last long; by 1921 it was engulfed in the Bolshevik revolutionary war, and subsequently was forced into the Soviet Union, yet the proclamation of that independence day has become a veritable landmark in the Byelorussians' history. It is remembered by all Byelorussians as the day on which their cherished national dream was realized, and their national independence attained.

Since 1921 more than 10 million Byelorussians have been chained to the brutal Communist steamroller. The fair land of Byelorussia has become a torture chamber for its unfortunate and helpless peoples. Innocent Byelorussians have been forced out of their homeland by the hundreds of thousands and are exiled to distant and uninviting parts of the Soviet Union. In Byelorussia the idea of freedom and independence have been proscribed; any thought of attaining national political independence is impossible under the watchful eye of the ubiquitous state security police. The unfortunate Byelorussians will not be allowed to celebrate their national independence day. Fortunately, however, those Byelorussians who live in freedom, particularly those in this free and hospitable country, celebrate that memorable day; and we gladly join them on the anniversary of their independence day and in their prayers for those Byelorussians who can celebrate only in secrecy.

Role of Arsenals in Defense Sifted

EXTENSION OF REMARKS

OF

HON. EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1956

Mr. BOLAND. Mr. Speaker, a matter that is of deep concern to the Massachusetts congressional delegation is policy of the Department of Defense with respect to the arsenals at Springfield and Watertown, Mass. Skilled craftsmen with many years of Government service have been chopped off the employment rolls. It is expected that further reductions in force will occur before the end of the calendar year. Our delegation has repeatedly protested this action. It does not seem to be and it is not in the interest of the Government to discharge workers whose know-how is essential to the national defense. The layoffs are based on the argument that these arsenals are engaged in research and development and production of weapons of which the defense officials now state that the inventory of these armaments is sufficient. We do not dispute this statement and we do not ask that production of these weapons be continued beyond any reasonable stock for use. We do, however, maintain that when such are produced and are needed, production should be by the arsenals that have developed them. To maintain a sufficient production force, it is necessary to divert other types of work to these installations. One of the fields in which this could reasonably be done is in the field of guided missiles.

I am particularly concerned with the Defense Department's policy of getting the Government out of business. If this program persists, there will be little effort expended to divert work of a different nature to the Massachusetts' arsenals that have given such great service and outstanding performance over many, many years.

Mr. Speaker, this matter is highlighted in a feature article of the March 23, 1956, issue of the Christian Science Monitor. It was called to my attention by Kenneth T. Lyons, the national commander of the Federal Employees Veterans Association—one who is doing a remarkable job in pressing for action on the problem in question.

Under unanimous consent, I include the article with my remarks, as follows:

ROLE OF ARSENALS IN DEFENSE SIFTED

(By Frederick W. Roevekamp)

The real core of the controversy over the possible shutdown of the Watertown and Springfield arsenals is the questions: Is it in the interest of national defense to turn basic weapons research over to private industry?

This central issue is being obscured by the vigorous efforts of Massachusetts Congressmen to retain jobs and skills in this region by pressing the Defense Department to let the arsenals share in the huge guided-missile program now switching into high gear.

Neither arsenal lends itself to guided-missile research, is the answer of the Pentagon to the hard-worded demands of Senators LEVERETT M. SALTONSTALL, Republican, and JOHN F. KENNEDY, Democrat, and other Congressmen to hear the detailed reasons behind announcements of wholesale discharges of workers at both arsenals.

Implied in this answer is, of course, the conclusion that arsenals have served their purpose in developing conventional weapons and are not adaptable to the highly specialized guided-missile field.

EXCESSIVE APPLICATION?

However, there are a number of men closely concerned with ordnance work in the Army who contend that the decision to keep the arsenals out of guided-missile work was not taken on technical grounds but is an excessive interpretation of the Eisenhower administration's avowed policy to get the Government out of business. This policy was designed to reverse earlier practices in which the Government got into such items as coffee roasting and paint manufacture.

The vital question now arises: Has the Defense Department swung over too far toward the other extreme of getting the Government out of purely military research work?

Indeed this is what is taking place, particularly in the Army, some informed sources say. Practically all research for the Army's approximately 40 different guided missiles has been given to private firms.

While it is sound policy to let industry do the giant job of mass-producing, it may be dangerous also to turn over the laboratory job of designing and prototyping guided missiles, it is pointed out in these quarters.

PRODUCT TYPE NOTED

Industry's natural profit motive does not necessarily conflict with mass production in defense, it is pointed out, research and development of trucks and airplanes by industry may be defensible on the grounds that these products are also civilian commodities.

But industry is not equipped to handle basic development of purely military products such as guided missiles primarily designed for the greatest destructive potential.

Instances which show that industry cannot handle such work as effectively as Government's military research units are being cited. When a missile contract was given to a large eastern electronics corporation, the company approached a west coast aviation firm to take over the development of the actual airframe while the electronics company assumed the responsibility for the electronics part.

After the west coast company had managed also to obtain from the electronic firm the contract for the launching equipment, it became apparent that it was not qualified to do this effectively.

ARSENAL CONSULTED

Then the electronics firm turned for advice to the Watertown Arsenal, long experienced in such work. But the arsenal was prevented by Defense Department regulations from taking on the subcontract for the launching equipment. And yet, even now the arsenal is developing the launching platform for the Army's "Honest John" missile.

One of the chief reasons for this shortcoming is not that private plants per se are less effective than Government researchers, it is emphasized. Rather it is because industry is geared primarily for its civilian production line and tends to concentrate its resources and its top men there.

There are those who believe that much of the lag in the United States guided missile development is due to the attempt to assign to civilian industry the task of basic research and proto-type production.

Government research installations by nature are geared for crash programs. Almost every order the Watertown Arsenal, for example, receives now is of a crash or emergency nature and must be pushed without regard to expenses or effort.

MEASURING DEVICE

Among top planners in the Army there is a strong belief that if such Government installations were given the entire contract for a number of missiles, their performance would serve to act as a sort of measuring device against that of industry, thereby assuring the highest possible efficiency.

Watertown Arsenal, for instance, could take on an entire missile development contract and then subcontract the electronics phase to some leading electronics firms in this area.

The Greater Boston area is internationally known as a concentration of topflight electronics research firms. A total of 27 principal electronics industries are located virtually in the backyard of the arsenal.

The time has long passed when arsenals carried the defense production job. Today they are regarded primarily as research and development units, laying the groundwork for industrial mass production as well as supervising its progress.

Because present Pentagon policies prevent them from developing a complete prototype of guided missiles, a number of German rocket scientists reportedly have left and plan to leave work at the Redstone Arsenal to take similar jobs with industry.

Refuges Battered by Triple Attack

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1956

Mr. DINGELL. Mr. Speaker, under unanimous consent, I include in the RECORD an editorial by Michael Hudoba, associate editor of Sports Afield, which appears in the March 1956 edition of that magazine. I believe this is very important and should be brought to the attention of the Congress and the people of the United States.

The editorial follows:

REFUGES BATTERED BY TRIPLE ATTACK

Can the national wildlife refuge system survive?

Not in the memory of this reporter has there been such a concentrated series of pressures to disrupt, exploit and take over the 17½-million acres of wildlife refuge lands. Nor, have these threats and raids been so successful.

Although the refuge system is sadly inadequate, it has been laboriously built over the years to about 50 percent of its needs for wildlife conservation (the waterfowl refuge system is only up to one-fifth of what is needed for the ducks and geese). Yet the past 2 years have seen direct assaults, erosion and subtle moves encroaching, whittling and slicing away at the entire system and its individual units.

Whether the refuges can be saved becomes a serious question for even the sportsman who wonders casually about his wildlife resources. It will take the most drastic steps to stem the cancerous gnawing at the refuge concept.

There are three basic types of deterrants to the system. These all have been accentuated in the past 2 years.

The first is the demands by the Army, Air Force, and Navy for refuge lands to be used for bombing, target ranges, and maneuver areas. Where these demands were formerly for temporary permit, requests are now pending for permanent use by the Defense Department.

The second is the whittling away of the refuge system areas under the theory of multiple-purpose-use of resources. The oil and gas leasing order for prospecting and drilling comes under this category.

The last is the failure to expand and develop the refuge system through inadequate budget.

The first two of these threats to the refuge system come from the Federal Government and the Interior Department, which administers the refuge program.

The latter is the result of joint responsibility between the Interior, Budget Bureau and the Congress for failure to seek, recommend and make adequate appropriations.

Unless prompt steps are taken to inhibit encroachments on the refuge system, in addition to measurse designed to strengthen protection of refuge lands and provisions for stepped up budgets to enable the refuge system to meet the critical wildlife and waterfowl needs, there is more than enough reason for concern over the future of the refuges as a fundamental game management program.

Representative FRANK KARSTEN, Democrat, of Missouri, a member of the Migratory Bird Reservation Commission which approves the acquisition of refuge lands, has become concerned over these problems to the point of introducing House Resolution 350.

House Resolution 350 would set up a special 5-member committee of the House of Representatives to conduct a complete investigation of the operations of the Fish and Wildlife Service pertaining to replacement and conservation of wildlife and the maintenance of wildlife refuges.

The special committee, if approved by the House, would also give particular attention to the oil and gas leasing on wildlife refuges. It would study the adequacy of the oil and gas order to protect wildlife on the refuges, and whether the usefulness of the refuges would be impaired by this order.

The committee would have subpena powers for witnesses and records, paper, and memoranda, and would hold hearings to investigate, study, and report recommendations to the present Congress.

House Resolution 350, referred to the House Rules Committee, offers a prompt and direct method to produce results for strengthening the national wildlife refuge system.

If the oil and gas leasing order protects the refuge system, as the Interior Department so vigorously claims, it should not fear the special congressional study. And Congress should welcome the interest of its Members to concentrate a study of the refuge program. It is of particular importance to all those interested in wildlife conservation restoration.

A Happy Contrast

EXTENSION OF REMARKS

OF

HON. CHESTER E. MERROW

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1956

Mr. MERROW. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include therein the following editorial from the Somersworth Free Press, Somersworth, N. H., Thursday, March 22, 1956, entitled "A Happy Contrast":

A HAPPY CONTRAST

It would be hard to find a more fitting example of the basic difference existing between the American and Russian way of life than is contained in the news accounts emanating from behind the Iron Curtain this week.

We refer to the purges which are now on against those Russians in the province of Georgia who dared to demonstrate when the Russian oligarchy put new vigor into its policy to discredit former Premier Joseph Stalin.

For decades that country's propaganda machine has engaged in the "big buildup" by which Marshal Stalin was afforded a place in the eyes of his people on a level which we in the Western World have reserved for the Deity. Children from their earliest learning were indoctrinated in their homes, schools, and workplaces with the Stalin way of life.

Now all that is reversed and as happens under a dictatorial government, new leaders find it essential to their own preservation to direct the attention and loyalty of the masses away from past heroes and to

themselves. Policies are being instituted which are contrary to those formulated and advanced by Stalin. Hence, the references of recent days to "mistakes" which Stalin has made and for which amends must be made. Those who fail to see or send up their voice in protest to these policy changes must be eliminated.

How pleasantly different is the American way.

In this country no one is obligated to believe that former President Truman or Franklin Roosevelt were particularly good or particularly poor Presidents. No one needs conform with the Republican "party-line" and believe that President Eisenhower's policies are the only perfectly correct ones. Indeed, if any American citizen believes President Eisenhower is doing an inadequate job, then he needs only declare his intentions publicly and be a candidate himself for the job.

In this country, and here's the crux of the subject, it's the individual who's important and if he has sufficient friends who'll troop to the ballot box in his support, then he can wield the power and direct the fortunes of our people. In Soviet Russia, on the other hand, the state is all important and individual rights and freedoms must yield to whatever a select few indicate to be the best interest of the whole. That is a way of life alien to our Western tradition.

In an election year, the Soviet purges should convincingly demonstrate that ours is a heritage much too precious to neglect.

Lesson in Foreign Aid Policy

EXTENSION OF REMARKS
OF
HON. CHARLES B. BROWNSON
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 29, 1956

Mr. BROWNSON. Mr. Speaker, United States foreign assistance started with the lend-lease program of World War II under which we supplied $47 billion of defense materials and services to our Allies. Since the end of World War II the United States has poured more than $55 billion additional into foreign aid of one kind or another making a total of $92 billion overall assistance.

This year, Congress has been asked for approximately $4.9 billion of new obligational authority to finance mutual aid which is $2.2 billion more than the $2.7 billion of obligational authority of the current fiscal year. A new aspect of foreign aid has been introduced in the administration request for permission to make long-term commitments involving an estimated $100 million for projects which will take a number of years to complete, such as the Aswan Dam in Egypt, and the development project for the Menkong River in Thailand, Vietnam, Laos, and Cambodia.

Aside from lend-lease and government and relief in occupied areas, foreign aid may be said to have started with $400 million and the Greek-Turkey aid program passed by the 80th Congress. This was a specific program designed to help 2 specific countries solve 2 specific problems. It worked.

It seems to me now is the time to return to legislative authorization for aid to individual countries who request, merit, and justify assistance rather than continuing our worldwide package deal on a take-it-or-leave-it basis. It seems to me significant that 34 separate overseas agencies with a total of over 115,000 employees in foreign countries have been engaged directly or indirectly in activities relating to this worldwide permanent-type aid program.

The half million constituents whom I represent want a balanced budget, economy and efficiency in government, a tax reduction, and an end to this automatic worldwide dole. C. Hartley Grattan, the economist, expressed the indignation I believe they feel when he wrote: "It seems to me that we are getting more foggy and evasive about the kind of reality we are facing every day that passes. We never quite say what we are doing, or what is being done to us, for fear, apparently, that if we begin giving things their right names they will really and truly scare us to death."

After the money is spent, can we say that all these programs work well? Of course not. I was extremely interested, last week, to read in the Sunday New York Times for March 18, 1956, an article entitled "Lesson in Foreign Aid Policy." I have discussed this particular article with several of my colleagues, including the able gentleman from Indiana [Mr. BRAY], who has often told me of similar experiences during military government days in Korea when aid became a burden as we tried to force technical assistance—technological advances—on a country whose economy was not yet ready for such rapid progress. Others of our colleagues have joined me in observing it is unfortunately true that foreign aid by increasing the total resources available to some foreign governments has allowed them to continue outmoded economic practices and to indulge their taste for radical social welfare measures.

Mr. Speaker, in studying a great deal of material on foreign aid preparatory to voting on this important measure, I have found no article more helpful than the one to which I have referred which was written by Peggy and Pierre Streit. Under unanimous consent, I include it in the RECORD at this point so that my constituents will understand my position when I vote against overall, blanket, prepacked foreign aid.

The article follows:

LESSON IN FOREIGN AID POLICY

(By Peggy and Pierre Streit)

KABUL, AFGHANISTAN.—The Helmand Valley irrigation project, the largest American-financed and constructed development in Asia, was conceived in 1950 as a boon to the people of Afghanistan. Since then, this boon has become a bitter burden that seriously threatens the Afghan economy and presents the United States with a critical problem in a politically strategic area.

The history of the Helmand Valley project is timely and valuable for two reasons. First, most of its problems are encountered again and again in underdeveloped countries. And, second, the American techniques of foreign aid, employed with dubious success in Afghanistan, are being used elsewhere in the Middle East and Asia.

American foreign aid policies are now undergoing critical reappraisal in Washington. To a large extent the story of this important but little known project can help make future aid programs more effective.

Afghanistan is a landlocked country, bordered on the north by Russia, on the west by Iran and on the east and south by Pakistan. Her geographical position has long isolated her people, both physically and culturally, from the social and technological developments of both East and West.

Recently, however, with the awakening of the Middle East and Asian countries, Afghanistan has begun to seek economic development of her potentially rich land, primarily by harnessing the waters of her turbulent Helmand River. This river has its source in the Hindu Kush Mountains and then winds for 800 miles through southern Afghanistan into Iran.

Before World War II, the Afghan Government hired Japanese technicians to begin work on a large canal designed to tap waters of the Helmand for cultivation. Work, interrupted by the war was resumed shortly thereafter, this time with the help of the Morrison-Knudson Co., an American construction firm hired by the Afghan Government. By 1949, however, the Afghans had vastly increased the scope of their plans. They now envisioned the Helmand River project as providing a firm water supply, hydroelectric power, flood control, improvement of old river land and development of approximately 500,000 acres of new land. Here the Afghans hoped to settle a large percentage of their 2 million nomads, whose perennial wanderings represent a severe drain on the Afghan economy, if not a complete loss.

The Government of Afghanistan turned to the United States Export-Import Bank for assistance in this vast undertaking. In requesting a loan, it sought aid only for the construction of major works—the dams and principal canals. The Afghans undertook to do the rest—to bring the water from the main canals to the land, to prepare the new lands for cultivation and to settle the nomads. In 1950, on the basis of these assurances and the fact that Afghanistan had a tidy dollar reserve accumulated during the war years, the bank granted a loan of $21.5 million for the development of the Helmand Basin. The loan stipulated that an American construction company should do the work, and Morrison-Knudson, already on the scene, was hired.

Morrison-Knudson brought to Afghanistan the efficiency of American private enterprise. It acquired its equipment, from nails to 25-ton trucks, from the United States in record time and was able to work steadily without the onerous handicap of having to apply to Congress each year for funds. It utilized the full talents and capabilities of local Afghan labor by establishing a training program, thus substantially reducing costs. Construction costs were held to American standards despite the fact that all equipment had to be shipped 8,000 miles. Two large dams and the irrigation network were completed months ahead of schedule.

Where once there was parched, brown Afghan earth there are now two fresh, blue lakes, and cranes and ducks are nesting where only the desert fox could live. For the first time farmers can rely on a steady supply of water from the Helmand. Last year, a drought year, these waters saved a large part of Afghanistan's fruit crop. And whereas in the past farmers have barely been able to reap 1 crop, they now almost doubled their produce with 2 yearly plantings. But as Morrison-Knudson's work progressed, the portent of a major economic and political crisis began to appear. It became sharply and tragically apparent that the persons who granted the loan, like the Afghans who accepted it, had failed to evaluate the coun-

try's ability, economically and socially, to handle the problems created by such an extensive undertaking.

It became apparent that the Helmand Valley Authority, the Afghan organization created to take over the operation and maintenance of the irrigation network, to prepare the new lands for cultivation and to settle them, had no trained men to assume these responsibilities. Furthermore the inadequate Afghan educational system offered little hope of obtaining these men. At the time HVA was to assume operation it had 1 trained engineer and 1 trained agriculturist, both fresh from foreign schools and with no practical experience. The Afghan Government gradually realized that the operation of hydraulic valves, the determination of proper water distribution, and the maintenance of a tremendous network of canals was a highly complex job and that misuse of equipment and canals could seriously damage or destroy both.

Furthermore, it also became clear that the newly settled nomad-farmers had no conception of the proper use of either land or water. Men who for centuries had used the most primitive agricultural methods and had thirsted for water did not understand the importance either of leveling the land or of leaching it of its salt content. Suddenly endowed with an abundance of water, they drowned their land, raising its salt content to the point of ruination. This land can be reclaimed, but the process is expensive, and until the Afghan farmer learns how to use his newly acquired treasures reclamation will be useless.

Some of the newly developed desert lands have also proved of inferior quality and unsuited for cultivation unless very evpertly handled. By ill fortune, the very first tracts to be settled and cultivated have been particularly difficult. Though extensive soil surveys ordinarily precede an irrigation project, these surveys had not been considered feasible in the case of the Helmand because of their complicated and time-consuming nature. Thus, nomads, lured from their old life by promises of a new one of ease and plenty, have been settled on lands that offer a hard and meager existence. Some of them have already abandoned the valley to return to their ancient nomadic wanderings.

Despite these ominous developments, the Afghan Government, having used up its first loan, turned to the Export-Import Bank for another to push the project through. In 1954, the bank, primarily to safeguard its initial investment, granted the country a second loan of $18.5 million. To date, however, there has been no decisive improvement in the Helmand Valley Project, and the very magnitude of the unforeseen difficulties has created a major political crisis in Afghanistan.

Under the terms of the loan, Afghanistan has paid all local construction and operation costs as her share of the project expenses. These have amounted to about one-third of the Afghan yearly budget of approximately $24 million—or what to Afghanistan is the staggering sum of $8 million a year. Thus, an overwhelming sum has been and is likely to continue to be spent on an undertaking which so far has yielded no revenue and which is not likely to yield any soon.

In consequence, the Helmand Valley Project, which was to have been a boon to Afghanistan, has today placed a dangerous strain both on the Afghan economy and on the nation's morale. Some Western observers in Kabul reason that recent Afghan-Russian trade agreements and the Afghan acceptance of a $100 million Soviet credit represent a partial attempt to mitigate this plight. If this is so, the United States may have unwittingly and indirectly contributed to driving Afghanistan into Russian arms.

The current state of Afghan fears and disillusionment over the outcome of the Helmand Valley project is indicated by the fact that no word of it is being published in the local newspapers and by the further fact that no key figure in the present Afghan Cabinet has journeyed the 400 miles from the capital to see the project. American observers guess that top Afghan officials are afraid to associate themselves too closely with such a precarious enterprise.

There are persistent rumors that the Cabinet is considering dropping the development as too big to handle. But strong pressures so far have prevented this. The Afghans have invested too much money to permit their withdrawal. And to abandon the settlement project is to lose face with and control of the nomads, an eventuality Kabul dares not risk.

In their distress over the failures of the project, the Afghans, not unnaturally, have laid much of the blame on those most closely associated with it. These are the Export-Import Bank, which the Afghans somehow feel made an injudicious loan, and the Morrison-Knudson Co., which the Afghans, rightly or wrongly hold responsible for the development of some of the inferior lands. But to Afghan eyes these two organizations are synonymous with the American Government. This conviction was further strengthened when the International Cooperation Administration, the foreign-aid arm of the United States Government, began work in Afghanistan in 1952.

Hence, whether Afghan logic is valid or not, in the eyes of Afghanistan, as well as the Middle East and Asia, the good name of the United States is now vitally at stake in the Helmand Valley—and at a time when the Soviet Union is entering the foreign-aid field, not only in Afghanistan but throughout Asia.

In the International Cooperation Administration, both the Afghans and the Americans had hoped to find some solution to the grievous problems of the Helmand. But ICA's operation in Afghanistan has been limited to technical assistance—to providing the country with American personnel having the technical know-how to advise the Afghans on their economic and sccial problems. And its budget in Afghanistan has been a comparatively small one—approximately $2 million in 1955.

In view of the significance of the Helmand Valley project, both to Afghanistan and to the United States, it might have been expected that ICA would have placed all its limited resources and its total personnel emphasis on this development. ICA officials believe, however, that Afghanistan vitally needs help in many other fields as well. Thus, beside the Helmand project, ICA has embarked on long-range national programs in approximately 16 fields, including education, agriculture, and natural resources, industry and mining, public health and sanitation, rural development, public administration, and community development.

These programs, ICA officials claim, will eventually redound to the benefit of the Helmand Valley by providing a broad reservoir of educated personnel upon which the project can ultimately draw.

Critics of this approach protest that ICA's work in Afghanistan has been spread so thin that results are and will be negligible. They believe that the broad national programs mentioned above are too indirect to benefit the Helmand Valley in any but a remote way. This, they feel, is particularly true of ICA's educational program. These critics hold that the crisis in the Helmand calls for fast and specific action which ICA has not taken. They feel that if the project is to be saved, a thorough survey of its technical and personnel needs must be made and immediate steps taken to meet them.

What direct assistance ICA has provided in the Helmand is also vigorously criticized, and by its own employees, on the grounds of inefficiency, mismanagement of personnel, and general program disorganization. The discontent and frustration of many ICA technicians now working in the valley is reflected in the following extracts from the final reports of two men who have recently left the Helmand:

"The high rate of the intestinal diseases, caused mostly by the contaminated water they were forced to use, no other being available, indicated that this well-drilling program was a definite need if there was to be any improvement in the health of the villagers. The well-drilling rig was ordered early in 1954, and arrived in Afghanistan in July of 1955; the 4-inch well casing arrived in late 1954. The pumps and other well supply equipment have not arrived as yet (October, 1955). Small size galvanized pipe, to be used to extend waterlines from proposed concrete water tanks, has not arrived. Due to the complete lack of materials, the water supply improvement has not been carried out as planned.

"The well-drilling rig is at present being assembled by ACU (Afghan Construction Unit), but no crew experienced in its operation is available. The well-drilling operator originally requested probably will be on hand for the training of a crew of workmen. Therefore, a scratch crew used by M-K in the drilling of a few wells will be hired. No arrangements have been made by ICA for paying the crew, maintenance of the machine or cost of operation.

"I suggest that work on the hospital be continued to completion as soon as possible. This is one construction project of two that is visible evidence of FOA (ICA) work in Afghanistan, the other being the swimming pool at Lashkari Bazaar.

"My assignment was as an agricultural economist to advise on problems of land use and those social problems ordinarily associated with the settlement of newly developed land. The cooperating agency was unable to find a counterpart (an Afghan to be instructed by the American technician) for me until quite recently; so that very little of my time has been devoted to my professional field, and accomplishments are few.

"On this tour of duty living conditions, for me, have been satisfactory and my personal relations with Americans, Afghans, and Pakistanis have all been harmonious and pleasant, but the amount of visible accomplishment has been very disappointing, my advice has not been sought in any important matter and that volunteered has been rejected in nearly every instance. The course of events will reveal whether or not the advice was good."

ICA faces overwhelming problems in Afghanistan, and particularly in the Helmand Valley. It must work with an almost illiterate people, overcome the language barrier, cope with Washington bureaucracy and meet many bitter and accumulated problems inherited from a project it had no part in creating. Where responsibility rests for the existing confusion and inefficiency is open to question. But the fact clearly remains that the help Afghanistan needs she is not getting, and the Helmand Valley has profited relatively little from ICA's presence there.

Could the United States have been spared the crisis it now faces in Afghanistan? Four agencies have been involved in the Helmand Valley project; yet it does not seem that full responsibility can be attributed to any one of them.

Undoubtedly the Afghan Government overestimated its ability to cope with such a massive project. But having been long isolated from the rest of the world and having no previous experience with large-scale developments, Afghanistan can hardly be blamed for her lack of knowledge.

The Morrison-Knudson Co. did recognize some of the inherent hazards of the undertaking. But M-K, as a private organization, had responsibility only for a con-

struction job and not for its economic and political consequences.

The United States Export-Import Bank, in granting the first loan, dealt with the project primarily as a banking venture. It could not fully examine the consequences of the loan, nor did it feel called upon to assume responsibility for them.

The American Embassy in Afghanistan was extremely small when the initial loan was made. It had no staff to make extensive appraisals of the project. Furthermore, Afghanistan was then far outside the pale of the primary preoccupations of American foreign policy. At the time of the second loan, the die had been cast—American interests appeared so deeply involved in Afghanistan that there was little choice but to continue with the project.

In short, there was no single agency charged with the responsibility for investigating the long-range consequences of this giant American-financed venture.

What has been learned by 5 years of bitter experience in Afghanistan?

One lesson seems clear: a prerequisite of future extensive economic development projects in Asia and the Middle East is a thorough evaluation of the economic and social tolerance of a given country for a given project. One thing that must be guarded against is doing too much too soon. Furthermore, it seems apparent that overall authority and responsibility for this work and supervising the projects as they progress must be vested in a suitable agency.

It should also be recognized that the techniques of American foreign aid which were effective in Europe, where the foreign-aid program was born, do not necessarily apply in Asia. In Europe trained technicians existed; all they needed was up-to-date technical advice. In Asia these trained technicians seldom exist, and American technical advisors find themselves with no one to advise. Thus, American foreign-aid policies must be revised to permit American technicians to operate projects until the nationals of the assisted country have had sufficient time and training to utilize American advice. This indicates that an economic development project has little practical use in Asia unless it is supplemented with a training program geared to produce the personnel needed to operate it.

The United States must also accept the fact that its prestige will inevitably be at stake wherever any American organization, public or private, engages in development projects in this part of the world.

And, finally, the United States Government and the American people must reconcile themselves to the fact that the much-needed foreign-aid program in underdeveloped countries of Asia and the Middle East is a Herculean task, long range in nature, fraught with frustration and criticism, with results that, by American standards, are bound to be agonizingly slow.

Perhaps the most important lesson the Helmand Valley project can teach is that the United States still has much to learn about helping others to help themselves.

Our Hellenic Heritage

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 29, 1956

Mr. MERROW. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include therein a speech given by me in the Greek Orthodox Church Assumption Virgin, Manchester. N. H., Sunday, March 25, 1956, in celebration of the 135th anniversary of Greek Independence Day. The speech is entitled "Our Hellenic Heritage":

OUR HELLENIC HERITAGE

(By Congressman CHESTER E. MERROW, Greek Orthodox Church Assumption Virgin, Manchester, N. H., Sunday, March 25, 1956)

I am very grateful for the opportunity to participate in this ceremony commemorating the 135th anniversary of Greek Independence, established on March 25, 1821, when Greece raised the standard of revolt against the Turks. On this occasion we pay tribute to the young men who made the supreme sacrifice in order to help maintain the Independence of Greece. Today we honor Greece for the great contributions made over all the years to the free way of life.

GOVERNOR DWINELL'S PROCLAMATION

The Governor of New Hampshire in his proclamation setting aside Sunday, March 25, 1956, as Hellenic Day, used these words:

"Whereas Greece has contributed much to the advancement of mankind in the field of art, literature, and science in the past 2,500 years, and has been a leader in the preservation of independence; and

"Whereas the Greek nation has taken up arms as our ally in two world wars and is now allied with us in preventing the attempted encroachments of totalitarian powers in Eastern Europe; and

"Whereas Greece stands as the bastion of democracy in the West in preventing communism from spreading its hardships and evils in that part of the world;

"Now, therefore, I, Lane Dwinell, Governor of the State of New Hampshire, do hereby proclaim Sunday, March 25, 1956, as Hellenic Day in honor of the 135th anniversary of the Greek independence."

GREECE, THE BIRTHPLACE OF DEMOCRACY

The Greek people and their friends in all the Western World look to this day as a day of rejoicing, a day of retrospection, and a day of rededication to the ideas and ideals that form the foundation of free civilization. The free world, and particularly the Western World, hails Greece as the birthplace of the democratic form of government and of a glorious civilization which, even at the present hour, we are being called upon to maintain and defend.

The United States is the undisputed leader of the Free World in this struggle. We recognize that the roots of our institutions lie deep in the history of Greece. It is the wonder of the world that on the tiny Hellenic peninsula freedom had its birth, and that the developments in Greece form a heritage which has made possible subsequent democracies and the rise to the position of preeminence which we hold today. In all the annals of history, no group of people has had such a far-reaching and powerful influence on the establishment of freedom as have the Greek people.

OUR INDEBTEDNESS TO GREECE

Daniel Webster, in his moving and immortal speech delivered in the United States House of Representatives on January 19, 1823, stated in clear and eloquent language the influence which Greece has had upon the Republic of the United States. These words are as true today as when delivered by one of the world's foremost orators—a man whose eloquence ranks with that of the Greek orator Demosthenes. Said Webster: "We must, indeed, fly beyond the civilized world; we must pass the dominion of law and the boundaries of knowledge; we must, more especially, withdraw ourselves from this place, and the scenes and objects which here surround us—if we would separate ourselves entirely from the influence of all those memorials of herself which ancient Greece has transmitted for the admiration and the benefit of mankind. This free form of government, this popular assembly, the common council held for the common good—where have we contemplated its earliest models? This practice of free debate and public discussion, the contest of mind with mind, and that popular eloquence, which, if it were now here, on a subject like this, would move the stones of the Capitol—whose was the language in which all these were first exhibited? Even the edifice in which we assemble, these proportioned columns, this ornamented architecture, all remind us that Greece has existed, and that we, like the rest of mankind, are greatly her debtors."

GREECE, A BASTION AGAINST TYRANNY

The proud history of Greece stretches into antiquity over a period of 4,000 years. It is a fascinating story of achievement against recurring adversity, and within the memory of millions now living, Greece stands, as she has so nobly done in the past, against the forces of tyranny and despotism. As we recall the history of Greece, there unfolds in our memory the long story of the valiant struggle which spans the centuries as the people of Hellas have defended free civilization against the barbarous onslaughts of tyrannical and despotic power. In ancient days people of lesser cultures looked with envy at the magnificent civilization of the Hellenic city-states. Time and time again the Greeks were forced to defend their very existence to fight for their ideals.

FOUNDERS OF WESTERN CULTURE

During the fifth century B. C. the Persian hordes under Xerxes were repulsed, ushering in with this victory the Golden Age of Greek culture. This was the age of Plato and Aristotle, the age of political, literary, and artistic maturity—the age that produced masterpieces that have since inspired art and thought the world over.

We recall the work of Plato and Aristotle in government, Sophocles in literature, Socrates in philosophy, Meton in astronomy, Ictinus in architecture, Hippocrates in medicine, Herodotus and Thucydides in history, Euripides in drama, and Protagoras in rhetoric. These individuals have played a major role in shaping Western culture and are influencing our way of life to the very hour. The breadth and depth of Greek intellectual accomplishments were so extensive that they form the basis of the free institutions we are defending today. As we recall Greek history on this most significant occasion, we are impressed anew by the ever-present influence of Greek thought on the very society in which we move today.

GREEK THOUGHT AND THE CHRISTIAN FAITH

Greece has given us a priceless heritage. The Greeks embraced the Christian faith and the first churches in Europe were founded in Macedonia by St. Paul. It was the combination of the Christian faith and the Greek thought that makes up the Greek tradition as we know it—the tradition that has lived on through the centuries—the tradition that forms the basis of free Western civilization. The combination of Greek thought and the Christian faith has produced the freedoms which we enjoy today and the emphasis that Christianity places on the value of the individual is at the core of our civilization.

The Golden Age was followed by that of Alexander the Great who succeeded even in his short lifetime in spreading the Hellenic culture through much of Asia and parts of Africa. As a result of Alexander's conquests, Greek became the common language of the whole Middle East, thus paving the way for the spread of Christianity.

By peaceful evolution this combination of Christianity and Greek thought transformed the eastern part of the Roman Empire into the Greek Byzantine Empire. This empire held the torch of civilization high for more than a thousand years and stood as a rampart between Christian Europe and despotic Asia.

GREECE THROWS OFF THE OTTOMAN YOKE

However, the Byzantine Empire succumbed to the Turks in 1453 with the fall of its capital, Constantinople. By the 16th century, the Ottoman Turks held all of Greece. Freedom and liberty seemed to have been stamped out in this cradle of democracy for the following three centuries. Yet through this long period of Ottoman rule, the Greeks continued to keep their heritage alive in their democratic ideals and their Christian faith. Through the church, they retained hope and resourcefulness. The Greek Orthodox Church has had a long, proud history in building a civilization of freedom and a civilization that places emphasis on the dignity of the individual human being.

When the 19th century opened, Turkey was decadent, with internal weaknesses developing rapidly. Resistance in Greece to the Sultan's rule, which had actually never ceased, began to grow. The Greek people were developing a strong sense of national consciousness. The impact of the superior Greek culture was felt by the Turkish overlords and by all the near neighbors of Greece.

Greek leaders of the rapidly rising middle class were interested not only in revolution against the Turks, but also in the establishment of the type of social and political government at that time advocated by the French revolutionaries. Having endured the hardships of foreign rule for centuries, the Greeks now felt that they could challenge the authority of their hated overlords and when their religious leader, Archbishop Germanos of Patras, raised the standards of revolt in his monastery against the Turks on March 25, 1821, all Greece joined him in this national struggle. It is most significant that the signal for the war of independence was given by a Greek prelate in a monastery.

Great Britain and France were both eager to see the oppressed Greek people win over the Turks. Even Czarist Russia, in her desire to see the Ottoman Empire weakened, was on the side of the Greeks. As for the United States, the memory of our own fight for independence was still fresh in our hearts and minds, and President Monroe spoke for us all in his annual message of 1823 expressing sympathy for the Greek cause.

With our own moral support and with the aid of a joint French-Russian-British fleet, the Greeks finally won—although the struggle did not end until 1827. Finally, the Turks were utterly defeated at the Battle of Navarino on October 29 of that year. Although they were supported by other friendly nations, the impassioned Greek patriots themselves made great sacrifices in this brutal war of independence. By these sacrifices they won forever the admiration of the American people and the freedom-conscious people everywhere.

GREECE DURING THE SECOND WORLD WAR

The development and progress of the Greek people was suddenly and disastrously interrupted by the Fascist attack on Greece in 1940. When the war first broke out in Europe, Greece had remained neutral. However, its neutrality was violated on October 28, 1940, when the Italians presented an ultimatum and then attacked.

The magnificent resistance offered by the small Greek Army on this occasion was totally unexpected by the Italians. The Greek Army not only kept the enemy at bay throughout the winter of 1940, but were able to capture two forward bases of the Italian forces. Thus the Greeks were able to bottle up the Italian forces for almost 6 months. It was not until the Germans opened up a second front that they were forced to fall back. This heroic stand against the Italian forces recalls an ancient day of glory when the Greeks at the Battle of Salamis in 480 B. C., even though woefully outnumbered by the Persian fleet, were yet able through sheer courage and fortitude to completely cripple and rout the enemy.

On April 6, 1941, the Germans attacked Greece from Yugoslavia and Bulgaria. The Greeks received aid from the British, but by April 27 the British force of 57,000 was forced to evacuate. The Greek Army was outflanked and had no alternative but to surrender. By June 1, the whole of Greece was in Axis hands. Her valiant stand against Hitlerite Germany commanded the respect and admiration of freedom-loving people throughout the world.

Before Greece fell into Axis hands, however, the determined Greek resistance had upset the Nazi timetable, which called for an attack on the Soviet Union early in the spring and gave the Allies valuable time to build up their strength. Some historians have also pointed out that the amazing strength shown by the Greek resistance also forced Hitler to keep troops in Greece on ocupation duty that might otherwise have been used against the Allies in Sicily and in Italy. In any case, it was obvious that the determined resistance of the Greeks made a considerable contribution to the Allied war effort.

As we contemplate the resistance the Greeks made to the Axis powers, we recall once again Daniel Webster's speech of 133 years ago in which he said: "Does it not become us, then, is it not a duty imposed on us, to give weight to the side of liberty and justice, to let mankind know that we are not tired of our own institutions and to protest against the asserted power of altering at pleasure the law of the civilized world." Magnificently and splendidly Greece has always risen to the occasion and struck telling blows for liberty that will be remembered forever in the annals of freedom.

There was bitter suffering in Greece during the occupation. Thousands of Greeks were killed by the invaders; hundreds of thousands more died of starvation and disease. Destruction was enormous. When Greece was liberated in late 1944, 11 percent of the population was dead either at the hands of the Nazis or from starvation and disease. The country was in a state of indescribable misery. Ninety percent of industrial equipment was destroyed. Farm lands were ravaged; all livestock had perished. The greater part of the Greek merchant fleet, which before the war had been one of the world's largest, was sunk. All that remained was a shell of a country and the shadow of a people.

RESISTANCE TO COMMUNISM

And then, this tragic situation was shamelessly exploited by international communism. Before the Greek people could recover from the chaos of World War II, they plunged into another war, civil rather than international. In the moment of Greece's greatest weakness, in 1945, the Communists struck.

Guerrilla bands had been organized by the Communists during the war to harass the Nazi occupation forces. With the end of the occupation and the setting up of a new government, the Communists had attempted to obtain a dominating position in the new Greek Government. They had failed. So guerrilla forces were sent from the sanctuary of Greece's Communist neighbors. They burned and pillaged 1,700 Greek villages, slaughtered thousands of men, women and children, and kidnaped 28,000 children who were transported behind the Iron Curtain. The Communists intended to take over the government and force the country to accept Communist control. They were almost successful, but the British quickly bolstered the Greek Government forces. Throughout this early period of Communist aggression, the British Government had to bear the major responsibilities.

However, by early 1947 Britain decided that she could no longer carry the burden of assisting Greece in her struggle. Also it had become clear that Greece still faced a long period of warfare. The United States at this time adopted the aid to Greece and Turkey program. On March 3, 1947, I said on the floor of the United States House of Representatives that I was convinced that "Greece and Greece alone is the only hope for democracy in the Balkan area. Greece is the one country in this section where anglo-American ideals and principles have a chance of surviving and spreading. * * * I hope that the United States will do everything in its power to aid Greece."

On May 22, 1947, Congress passed Public Law 75, granting military and economic assistance to Greece and also to neighboring Turkey. This legislation was carefully worked out by the House Foreign Affairs Committee, and I am happy that as a member of that committee, I supported the legislation vigorously and spoke for its passage when it was considered on the floor of the House. The United States immediately established military and economic missions in Athens. The groundwork was laid for a systematic military campaign to wipe out the Communist force. It was not until 1949, however, that law and order were finally reestablished. In that year a united Greek people, with American assistance, decisively defeated the Communist forces.

REBUILDING THE COUNTRY

Immediately after defeating the Communists, the Greeks turned to the immense task of rebuilding their shattered land. At the same time our own country stepped up its program of aid for the rehabilitation of Greece. In this field again, our assistance was wisely and courageously used. The Greek people, always sturdy, thrifty and hard working, accepted American aid with gratitude and worked with the full measure of their own ability to rebuild their shattered country.

The Greek economy has slowly recovered from the chaos into which it had been plunged. The railroad system has been fully restored and several hundred miles of new track have been added. Two thousand miles of highway have been repaired and resurfaced, and an additional 1,000 miles of highway have been added to the nation's road system. The important Corinth Canal and all Greece's ports have been cleared and put back into operation.

Production in the farmlands has now surpassed prewar levels and thousands of acres of swamp and wasteland in northern Greece have been drained and irrigated for the growing of grain and rice. Great efforts are now being made toward a long-range power development program. Plans are already in operation for the exploitation of Greece's rich mineral deposits.

In spite of the progress that has been made, economic recovery in Greece is still in the making. In per capita income and in natural resources the country is still among the poorest of the Western European family of nations. Yet these sturdy people, our allies in NATO, proceed with their tasks firmly and resolutely, confident that their unity of purpose will bring a steady improvement in their living conditions.

CYPRUS

The same spirit that has characterized the Greek people down through the centuries is evidenced today as they strive for liberty and self-determination on the island of Cyprus. The world is vitally concerned in what is happening on this tiny island and with the future of the Cypriotes, who are striving for self-determination and for union with their mother country, Greece.

I have long been interested and concerned with the situation in Cyprus. In September 1954, I was asked by Mr. Stephen S. Scopas, supreme president, Order of Ahepa, and chairman, Justice for Cyprus Committee, to serve on a national honorary committee entitled, "Justice for Cyprus Committee," com-

posed of prominent Americans to further this democratic and humanitarian cause and to uphold the principle of self-determination. I was pleased and honored to accept. On many occasions I have made my position clear and in letters written to members of the American Hellenic Council of New Hampshire in October 1955, I stated: "At this time I hope to reaffirm my personal views on Cyprus. As you know, they are well known and I have stated them on several occasions. I believe that freedom should be given to the Cypriotes. You can count on my continued interest and cooperation."

HOUSE CONCURRENT RESOLUTION 224

On last Tuesday, the 20th of March, I introduced what is now House Concurrent Resolution 224 which reads as follows:

"Whereas it is the policy of the United States to encourage efforts toward independence and self-government truly expressive of the desires of the people and as they show their capability to establish and protect free institutions; and

Whereas the Island of Cyprus, one of the most ancient cradles of Western civilization, is a vital part of the free world area; and

Whereas the island of Cyprus has been since 1925 a crown colony of the United Kingdom; and

Whereas 80 percent of the population of the island of Cyprus is Greek and has always been inhabited by Greeks: Therefore be it

"Resolved by the House of Representatives (the Senate concurring), That it is the sense of the Congress that ways and means should be vigorously explored and found in order to insure the applicability of the principle of self-determination of peoples in the case of the population of the Island of Cyprus."

VIOLENCE MUST CEASE

For the peace and welfare of the entire world, violence must come to an end in Cyprus. The 3 nations primarily concerned are Greece, the United Kingdom, and Turkey. All 3 are our allies through NATO. Greece and Turkey, along with Yugoslavia, are also members of the Balkan Pact. Thus the discord resulting from the situation in Cyprus affects all American interests in that part of the Eastern Mediterranean which borders on the Iron Curtain.

The self-determination of the Cypriotes is a matter in which we are vitally interested. Our own struggle for independence has made us sympathetic to the desire for independence by people wherever they may be. We understand and are sympathetic to the wishes of the Cypriotes for an opportunity to determine their own future, to govern themselves, and to be united with Greece.

Cyprus has become an international question. It is unthinkable that violence should continue on the island, and certainly every effort should be exerted by all the parties concerned in this matter to end violence and to reach a speedy solution to this problem. The Greek people, always dedicated to freedom, are anxious that the Cypriotes determine their own future and until this is accomplished, the problem will not be settled. In my opinion, the removal by the British of Archibishop Makarios from the island of Cyprus was most unfortunate and deeply to be regretted. It is my hope that ways and means will soon be found to enable the highest Cypriote church official of the Greek Orthodox Church, Archbishop Makarios, to return to his people.

It is fervently hoped that all those engaged in the handling of the Cypriote question will do everything possible to terminate violence, that negotiations will be resumed and proceed in good faith, and that Cyprus will soon attain the goal of freedom. Toward the attainment of that goal I pledge my continued efforts.

CONCLUSION

Thus, in commemoration of the aniversary of Greek independence, we see, as we have taken a cursory glance at the history of Greece, both ancient and modern, that there always burns in the heart of every Greek a constant and determined resistance to tyranny. Whether against Darius or Xerxes, the Ottoman empire, the Italian Fascists, the Nazis, or the Communists, the indomitable spirit of the Greek people inspires liberty-loving nations everywhere throughout the world.

So today, as we are engaged in a universal, world-encircling struggle against the evil forces that would destroy the ideas and the ideals that had their birth in Hellas and in Christianity, we receive anew, from the inspiring Hellenic heritage which is a part of the heritage of this republic, the determination and the inspiration to defeat the onslaught of communism against the free world. We will win in this, the greatest struggle for freedom in which men have been engaged.

On this Greek Independence Day in 1956, let all of us dedicate ourselves anew to the ideals of freedom which are at the core of the civilization we cherish. In the development of these ideals, Greece has made an extensive and imperishable contribution. At no time in history has the day we are now commemorating been of deeper significance. The accomplishments made on the Hellenic peninsula are wrap and woof of the fabric which constitutes the principles of the free world and the democratic way of life.

Because of Greek accomplishments, the Republic of the United States has been able to develop the greatest democracy the world has ever known. Greece has always carried on a most gallant fight for individual liberty. We salute Greece on this memorable occasion as the freedom-loving nations of the earth march to the future, determined to achieve success in this current universal struggle against communism for the survival of the free world and free men.

Convention of Railway Employees Urges Support of H. R. 9065, To Amend Railroad Retirement Act

EXTENSION OF REMARKS
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 20, 1956

Mr. MACK of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following telegram, which is a resolution of the Railway Employees Department in convention assembled in Chicago, Ill., adopted on March 5, 1956, as follows:

CHICAGO, ILL., *March 13, 1956.*

Hon. PETER F. MACK, Jr.,
House Office Building,
Washington, D. C.:

Resolution adopted by 11th convention of Railway Employees Department in session March 5–8, 1956:

"Whereas the Railway Labor Executives Association is sponsoring the bill H. R. 9065 now before the 84th Congress (and all identical bills); and

"Whereas such bill provides a badly needed 15-percent increase in benefits for most beneficiaries under the Railroad Retirement Act; and

"Whereas such bill proposes to keep the retirement trust fund in sound financial condition by raising additional funds in the amount of 2 percent of covered payroll; and

"Whereas the increase in tax on employees would be immediately offset by exempting all the employees railroad retirement tax from gross wages in the computation of his income tax: Now, therefore, be it

Resolved, That the Railway Employees Department, in convention assembled in Chicago on March 5, 1956, representing approximately 300,000 railroad employees, give full and unqualified support to the bill H. R. 9065, 84th Congress; be it further

Resolved, That a copy of this resolution be sent to the respective chairmen of the House and Senate committees by which this bill will be considered; and be it further

"Resolved, That each general chairman and delegate to this convention comunicate this resolution to the local lodges he represents with the request that the membership write to their Congressmen and Senators requesting their support of this bill."

MICHAEL FOX,
President, Railway Employees Department, AFL–CIO.

Law and Order

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 13, 1956

Mr. MADDEN. Mr. Speaker, the following resolution was unanimously passed at Terre Haute, Ind., when the General Missionary Baptist State Convention was held in that city on March 21, 1956:

The executive board of the General Missionary Baptist State Convention of Indiana, Inc., in session at the St. Paul Baptist Church, Terre Haute, Ind., March 21–22, 1956, appointed a special resolution committee on racial tension and authorized said committee to prepare and submit the following resolution:

"Whereas since May 17, 1954, when the Supreme Court handed down its historic decision against segregation in the public schools, there has been a reign of terror, violence, and murder against the Negro aimed at preventing him from aspiring to enjoy the democracy for which he has fought, bled, and died; and

"Whereas this violence, terror, and murder is committed in brazen defiance of the Constitution, the Supreme Court, and the American way of life; and

"Whereas we are firm believers in democracy and the democratic process, we feel that the Constitution of the United States spells out the rights and privileges of all American citizens and there should be no tension at points where the Constitution of the United States is crystal clear: be it therefore

"Resolved, That we commend the ministers and other leaders of Montgomery, Ala., for the gallant stand they are taking against tyranny, discrimination, and unfairness; be it further

"Resolved, That we urge the members of this convention to express their sympathy for and cooperation with them by not ceasing to pray for them and that all churches lift an offering and send a donation to them; be it further

"Resolved, That we, the General Missionary Baptist State Convention of Indiana, Inc., go on record as taking a stand against all activities against the Constitution of the United States, Supreme Court, and the democratic process; be it further

"*Resolved*, That we appeal to the President of the United States, the Attorney General of the United States, and our Indiana Senators and Congressmen to use the influence of their great offices to bring an immediate end to this reign of terror, violence, and inhumanity to humanity; be it further

"*Resolved*, That a copy of this resolution be sent to the President of the United States, the Attorney General of the United States, and each Indiana Senator and Congressman."

Respectfully submitted.

Rev. L. K. Jackson, Chairman; Rev. T. H. Rankins; Rev. W. H. Thomas; Rev. W. M. Caldwell; Rev. P. C. Harrison; Rev. C. G. Rowlett; Brother Solomon Stevenson.

Noisy Radio-TV Commercials

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 28, 1956

Mr. HOSMER. Mr. Speaker, this is an iterim report on my faltering campaign against the practice of broadcasting loud, noisy, and therefore obnoxious, commercials on radio and TV. The campaign was launched about 3 weeks ago on behalf of millions of harassed listeners, amongst whom is included myself.

First. The practice appears to continue unabated.

Second. The FCC has not responded to my complaints, or even acknowledged receipt of my letters.

Third. An identical nonresponse has resulted from my direct complaints to the radio and TV networks.

Fourth. Mail continues to reach my office from listeners all over the country seconding my complaint and demanding the practice be stopped.

Fifth. A midwestern radio and TV station owner has dignified my campaign with a letter, the burden of which is that commercials really are not loud, they just seem that way.

With such discouraging results thus far, perhaps the campaign ought to be abandoned. Broadcasters and the FCC apparently believe that it is only the people who object anyway and if they do not like loud commercials they can eat cake. But in my book the people still are important, and I intend to keep the campaign going.

Lest there be lurking doubts in the mind of any network vice president that the people are not really concerned, I offer the following sample from my mailbag:

MARCH 28, 1956.

Representative HOSMER:

Shrieks and groans and barnyard growls,
Wildcat calls and coyote howls,
Noise made sick by its own sad din.
Shriek of voice like horns from tin.
Everyone to his state, my boys,
Some dub it commercials,
I call it noise!

Thanks for your efforts, and don't reply to this. A Congressman like you is doing such a fine piece of work that he shouldn't be hampered by unnecessary letterwriting.

FLORENCE STELLWAGEN.

[From the Washington Evening Star of March 28, 1956]

LOUD COMMERCIALS

I take off my hat to Representative HOSMER of California, in his recent utterance regarding loud commercials on radio and TV.

Two years ago I wrote a letter of protest to one of our Washington stations setting forth in detail the offending programs both for their loud theme songs and commercials. Results, absolutely nil. Fact is they did not dignify my letter by an acknowledgment.

Perhaps now, since a Member of Congress has protested, we may get some action.

The only thing I could do in the matter was to switch the dial, which I have consistently done regardless of the quality of the broadcast.

R. L. HARRISON.

Barriers at the Border

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 27, 1956

Mr. PELLY. Mr. Speaker, recently I attended by invitation some discussions of the United States-Canada section of the Chamber of Commerce of the United States board of directors.

After participating in a frank discussion of policies affecting the relationship of Canada and ourselves, I was particularly interested in the following editorial in yesterday's Washington Post and Times Herald.

BARRIERS AT THE BORDER

While our distinguished Canadian guests are completing their visit here, it is perhaps useful to note that not all the measures restricting trade between the two countries originate with the United States. Canadian Finance Minister Walter Harris has just proposed as part of his budget a 20 percent tax on advertising revenues of foreign publications with special Canadian editions. This is directed particularly at such American magazines as Time and the Reader's Digest, the Canadian editions of which have circulations of some 165,000 and 875,000, respectively. Incidentally, the Digest, with editions in both English and French, has the largest circulation of any magazine distributed in Canada.

The measure is frankly protectionist and caters to the complaint of Canadian publishers that periodicals of strictly Canadian origin account for only about one-fifth of the circulation in Canada. It would apply only to magazines with Canadian editions carrying Canadian advertising (which Mr. Harris says are diverting advertising from Canadian publications), and not to regular editions sent duty free from the United States. There may be some sympathy with the fear of Canadians that they are being over-Americanized. But it is difficult to see how the demand for American magazines, which after all is a matter of taste, can be curbed by taxation of advertising. The Government's aim apparently is to drive the advertisers out of the special Canadian editions and the editions themselves out of business.

Advertising taxes are in any event an onerous and dangerous affair subject to great abuse. The Canadian proposal is essentially a foolish step comparable to the bill, happily vetoed by the governor, to prevent foreign-owned firms from brewing beer in Maryland. It is noteworthy that a number of newspapers, among them the Toronto Telegram, Montreal Gazette, and Ottawa Citizen, have spoken up vigorously against this kind of tax manipulation. There have been many trade discriminations of American origin, to be sure—though few of them of such audacity. But we have become so accustomed to reason and restraint from Canada's leaders that it is all the more deplorable to see them resorting to such an obnoxious form of protectionism.

Rail Pension Bill

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 29, 1956

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial which appeared in the March 31, 1956, issue of Labor, the official organ of 15 recognized standard railroad labor organizations. The editorial entitled "Memo to Congress on Rail Pension Bill," follows:

MEMO TO CONGRESS ON RAIL PENSION BILL

Members of the House Interstate Commerce Committee have had full opportunity to get the facts about the proposed amendments to the Railroad Retirement Act, as brought out at the committee's recent hearings. Other members of the House and Senate have been presented with a one-sided picture, painted in daily newspaper editorials stirred up by some high officials of the Treasury Department and Budget Bureau.

Labor believes all Members of Congress, and the public, are entitled to hear both sides. The side not presented in the hostile editorials follows:

First, there is no question that retired railroad workers, their wives, widows and other dependents, need increases in their pensions and benefits. Members of Congress know that from letters they receive from their constituents. The rail union chiefs are doing their duty in trying to get the needed increases.

Second, now as always, both Congress and the union representatives are trying to keep the Railroad Retirement Fund financially sound, so its income will equal its outgo in the long run. So the needed pension and benefit increases will be matched by an income increase.

That's what the rail unions propose—a 1 percent raise in the retirement tax on the employees and likewise on the employers, lifting the tax on each from 6¼ to 7¼ percent.

Now let's lay the rest of the cards on the table, face up for everyone to see. The amendment bill proposes that railroad retirement taxes shall not be counted as earned wages in computing the Federal income tax. The effect would be to save most of the employees about as much money as they would pay in increased pension tax. The hostile editorials say there's something wrong about that. Well, let's ponder it:

In the first place, a rail worker never sees the money deducted from his pay for retirement taxes. The latter are an unavoidable expense, which he must pay to hold his job and earn a living on the railroads. In that respect, the pension tax is just like other occupational expenses and business expenses which are deductible in income-tax returns.

They are too numerous to list here, except for a couple of examples. Professional men can and do deduct their bar association and medical association dues, thus reducing income taxes paid by lawyers and doctors. Union dues likewise are deductible. That's because such dues are working expenses, just as rail retirement taxes are.

Railroads are allowed to deduct their retirement taxes as a business expense. Why shouldn't the roads' empolyees be allowed to do the same sort of thing? Here's how it works out now:

Theoretically, the carriers and their employees are supposed to contribute 50–50 to the retirement fund. Actually, every $1 the employees contribute costs them 100 cents. But each $1 from the railroads costs them only 48 cents. They get back the other 52 cents by deducting the dollar from the profits on which they pay the 52-percent corporation income tax.

As a result, the 7¼ percent retirement tax proposed in the amendment bill would cost the carriers only 3.48 percent. The employees would pay their full 7¼ percent, unless they are allowed to offset the tax as proposed in the bill.

Even after such offset, most employees would pay at least 5.8 percent of their 7¼ percent pension tax, or nearly twice the 3.48 percent retirement tax actually paid by the carriers. That's because the offset would save the employees at the most only the 20 percent personal income tax on their contributions, while the carriers save the 52 percent corporation income tax.

Also consider this: Railroads and other corporations are allowed to greatly reduce their income taxes by charging off in 5 years the cost of plants and equipment which won't actually wear out for as long as 40 years. A railroad worker wears out on the job in 40 years or less, but he gets no charge-offs to reduce his income taxes while he's still able to work.

Both England and Canada allow workers to deduct their retirement-system contributions from the wages and salaries on which they pay income taxes. The Treasury, Budget Bureau, and the hostile editorials say it would cost too much to do that here, and they present greatly exaggerated cost figures in an attempt to scare Congress and the public.

Congress should not allow this cost talk to divert its attention from the purpose of the bill—to give retired railroaders and their families badly needed aid and the kind of tax treatment they should have had long ago. If a proposal is right and fair, it should be approved, even if it means some loss of revenue. Congress and the Treasury could more than make up the loss by plugging 1 or 2 of the many tax-law loopholes which allow rich men to dodge their share of the burden.

Letter Regarding Transportation Activities of the Post Office Department

EXTENSION OF REMARKS
OF
HON. LESLIE C. ARENDS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 29, 1956

Mr. ARENDS. Mr. Speaker, under leave to revise and extend my remarks, I am inserting in the RECORD a letter I received this morning from Assistant Postmaster General E. George Siedle.

I am doing this in order that the Congress may have full and accurate information relative to the operations of our postal service:

POST OFFICE DEPARTMENT,
ASSISTANT POSTMASTER GENERAL,
BUREAU OF TRANSPORTATION,
Washington, D. C., March 29, 1956.

Hon. LESLIE C. ARENDS,
House of Representatives.

DEAR CONGRESSMAN ARENDS: You, like myself, attended the dinner of the Federation of Railway Progress and heard President Kennedy of the Brotherhood of Railroad Trainmen.

During the course of his remarks Mr. Kennedy made reference to certain Post Office Department transportation activities regarding which he was either mistaken or misinformed. His remarks have since been published in the CONGRESSIONAL RECORD for Friday, March 23, 1956.

Realizing that as a Member of Congress you are vitally interested in the policies and conduct of the postal service, I feel that it is my duty to set the record straight.

Let me point out what Mr. Kennedy said, and show what the actual facts are.

1. Mr. Kennedy stated: "Literally hundreds of passenger trains have been pulled off * * * because the mail has been taken away and awarded to trucks."

The facts are: For the period February 1, 1953, to December 31, 1954 (a typical period), a total of 350 trains were discontinued. Of these, 311 were discontinued because the railroads took positive action to withdraw the trains before any mail was diverted. Only 39 trains were discontinued after mail had been diverted for service or cost reasons.

2. Mr. Kennedy said: "Trucks are obliged to bid against each other as contract carriers, and I am told a very large number of successful bidders have gone broke in their bargain services to the Department."

The facts are: Federal statutes require the Department to award contracts for motor-carrier operations to the lowest responsible bidder. Competitive bidding is mandatory. Department records show that less than one-tenth of 1 percent of successful bidders have failed annually.

3. Mr. Kennedy said: "Mail which it (Post Office Department) ships by rail is handled at a profit, and mail by air at a tremendous loss."

The facts are: Since nearly all nonlocal mail is carried by more than one mode of transportation before arrival at destination, it is impracticable to allocate revenues or cost to a single segment of a through movement. For this reason there is no way of determining a profit or loss on rail movement as against air movement. Revenues and expenses have been allocated, however, as between classes of mail. As shown by our cost ascertainment report, the Department experiences heavy losses on those classes of mail which move by surface means, chiefly by rail. On the other hand, it is on the class of mail which moves principally by air that the Department most nearly breaks even. It is therefore obvious that Mr. Kennedy's statement has no factual basis.

4. Mr. Kennedy said: "Yes despite this loss, the Post Office Department is engaging in an experiment * * * shipping 3-cent mail between important terminals by air. This action is absolutely illegal except as an experiment."

The facts are: The 3-cent airlift on a nonpriority basis has substantially improved service without added cost to the Department. The legality of the operation was questioned in a suit brought by five principal railroads and it was upheld unanimously by the United States Circuit Court of Appeals in the District of Columbia in a decision rendered in December, 1955. The court refused to put any limit on the length of time an experiment may be carried on.

As you are aware, it has always been Post Office Department policy to utilize the speediest available means of transportation. The Department must, therefore, take fullest advantage of the new developments in air and highway transport. This does not mean that we are abandoning railroad service. Far from it. Of a total of $439 million expected to be paid by the postal service to all forms of transportation companies in fiscal year 1956, the railroads will receive an estimated $302 million. This is more than twice as much as will be received by all other forms of transportation combined.

In making changes in transportation, the Department is definitely committed to economy as well as service improvement. In pursuance of this policy the total sum paid out to carriers for postal transportation was reduced from $421 million in fiscal 1953 to $378 million in fiscal 1955 even though the volume of mail increased 8.4 percent.

Sincerely yours,

E. GEORGE SIEDLE,
Assistant Postmaster General.

Small Business: Backbone of Our Country's Economy

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 21, 1956

Mr. DODD. Mr. Speaker, it has always been my contention that the small businesses of the United States have consistently formed and should continue to form the backbone of our country's economy.

I feel certain that all Members of the House will agree that in order to maintain our economic well-being, we cannot tolerate conditions which would jeopardize the existence of the independent businessman.

For these reasons, I am pleased to be associated with my distinguished friend and colleague, Mr. WRIGHT PATMAN, in cosponsoring H. R. 11, to amend the Robinson-Patman Act of 1936.

The amendment provided for in H. R. 11 is of great interest to me because I feel it will present a further guarantee that our free competitive system will be protected, by seeing to it that equality of opportunity for all businesses, large and small alike, will not be interfered with.

The Nation is constantly being told that we are in an era of prosperity. However, Dun & Bradstreet reports indicate that if there is such an era, it is one of big business prosperity. On the other hand, it is also an era of declining economic health for small businesses.

Although big business profits and stock market prices are at an all-time peak, we are witnessing the greatest number of small business failures since the pre-World War II depression years.

From the beginning of 1956, through March 22, there have been more than 3,050 small business failures in the United States. In a 1-week period of this month, there were more than 300 failures of small businesses. This number of failures sets a tragic record that has not been matched since early 1939.

This startling number of small-business failures clearly indicates that this vital segment of our economy needs help. The small-business organizations of this country have pointed out one way that Congress can help them, and that is for us to pass H. R. 11. This request is a modest and reasonable one. It does not ask for a Federal subsidy. It does not ask for a giveaway, but rather it is simply asking for antitrust laws which will give the small-business man a reasonably equal competitive opportunity to succeed.

I feel that if the small-business man is given this opportunity to succeed, it will serve not only the interests of small business, but it will serve the interests of all Americans.

In order to understand the importance of H. R. 11, it is necessary to review briefly what was accomplished by the Robinson-Patman Act, the act H. R. 11 is intended to amend. In 1936, the Clayton Antitrust Act was amended and strengthened by the Robinson-Patman Act for the purpose of giving small business protection from price discrimination. Thus the Robinson-Patman Act corrected a situation in this country which was of extreme detriment to small-business men.

Before the Robinson-Patman Act was passed, a big seller could engage in local price cutting, that is, price discrimination to drive the local competitor out of business. Likewise, a large and powerful buyer was able to obtain price concessions which enabled him to sell goods at prices that small competitors in the field could not possibly meet. This was true regardless of the small-business man's efficiency and good service to the public.

The legislative history of the Robinson-Patman Act seems to make one thing clear above all others, and that is that the act was intended to require the supplier to give fair and equal treatment to his wholesale and retail customers. More precisely the law was intended to require the supplier to charge equal prices to competing customers when there was not a difference in costs for supplying his different customers.

The law was not intended, nor did it give the small merchant any undeserved advantage, nor did it interfere with the efficiency that may be associated with large-scale marketing operations. The law clearly and specifically states that the supplier may charge his customers different prices up to the full extent that the different prices are justified by cost differences.

Thus the law was clearly intended to stop price discriminations where the effect of these discriminations would substantially lessen competition and tend to create a monopoly.

In the majority opinion of the Supreme Court in the case of Standard Oil Co., Indiana, against Federal Trade Commission, the desired effect of the Robinson-Patman Act was greatly decreased. In its decision the Supreme Court held that a charge of unlawful price discrimination could be defended by showing that the discrimination was made in good faith to meet competition. The Court held that this defense was good even though the discrimination resulted in a complete destruction of competition.

I feel the law should be effective against a monopolistic practice, and should prevent the creation of monopoly whether it is created in good faith or bad faith.

In the Standard Oil Co. case the Supreme Court seriously weakens the Robinson-Patman Act. H. R. 11 will correct this weakness and enable the Robinson-Patman Act to continue the usefuless to the Nation's economy that it has abundantly demonstrated over a number of years.

In my estimation H. R. 11 is a very modest and reasonable solution to the problem. It will restore the effectiveness of the Robinson-Patman Act. In effect, H. R. 11 simply says that it is illegal for a supplier to discriminate in his prices where the effect of such discriminations may substantially lessen competition or tend to create a monopoly.

This would not prevent a supplier from discriminating to the full extent justified by costs, nor prevent him from changing his prices when he desired, provided he makes the new prices available to all his customers. There is nothing in H. R. 11 that would prevent a supplier from refusing to sell to customers with whom he did not wish to deal.

H. R. 11 is not an antichain-store bill, nor is it in any sense an antibig-business bill. Rather it applies to all businesses, big and small, by giving to each a fair chance to buy from a supplier on the same terms and conditions under similar and like circumstances.

I have been assured that it has been endorsed by every genuine small business organization in the United States.

I strongly feel that H. R. 11 has great merit, and should be passed with dispatch. For the small-business man there is an urgent need that this bill will supply. It is no consolation to small business people who are going out of business today to know that we will eventually get around to passing this vital legislation.

There is a discharge petition on the Speaker's desk, and I ask my colleagues to sign this petition so that the Members of the House may have a prompt opportunity to pass on this legislation which small-business men need and want.

The need is urgent, and I feel that we should do all that is necessary to promptly enact H. R. 11 into law.

Thirty-eighth Anniversary of Lithuania's Independence

EXTENSION OF REMARKS
OF
HON. FRANCIS E. DORN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 29, 1956

Mr. DORN of New York. Mr. Speaker, I should like to bring to the attention of the House the statement of Secretary of State John Foster Dulles, and the proclamation of Mayor Robert Wagner, of New York City, on the occasion of the 38th anniversary of Lithuania's independence.

Secretary of State John Foster Dulles issued the following statement on February 16:

This year the peoples of Lithuania, Latvia, and Estonia will commemorate the 38th anniversaries of their declarations of independence from Russia. On this occasion it is appropriate to call attention once more to the determination and self-sacrifice which the peoples of these countries showed in the community of free nations.

Though the Baltic peoples have been deprived of this freedom, we know that they retain their will to be free.

We continue to believe in the principle that sovereign rights and self-government should be restored to those who have been forcibly deprived of them. We are confident that this principle will one day be realized.

Mayor Robert Wagner, of New York City, issued the following proclamation:

Whereas on February 16, 1918, Lithuania was proclaimed an independent republic by the people of Lithuania, climaxing a long struggle of a courageous and gallant nation for freedom;

Whereas Americans of Lithuanian origin and ancestry will commemorate this occasion with special services emphasizing their faith in the American way of life and demonstrating their belief in the inalienable rights of freedom-loving peoples; and

Whereas the people of New York City appreciate the contributions the Lithuanian people have made to the cultural heritage and development of this great city since the arrival of the first Lithuanian in New York City, Dr. Alexander Carolius Curzius, who came to teach the classics to the children of the early Dutch Colony of Nieuw Amsterdam (1659), today's New York, and as New York has served as the gateway to the ever-increasing numbers of Lithuanians who came here and became an integral part of our industrial system:

Now, therefore, I Robert Wagner, of the city of New York, do hereby declare February 16, 1956, Lithuania's Independence Day in the city of New York and call upon all citizens of our great city to observe this anniversary and pay honor to our Americans of Lithuanian descent.

The Proper Attitude

EXTENSION OF REMARKS
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 29, 1956

Mr. OSTERTAG. Mr. Speaker, Dr. Clifford C. Furnas, the Assistant Secretary of Defense for Research and Development, recently discussed our defense posture with me in a television interview. An eminent scientist himself, Dr. Furnas harbors no illusion that we in this country have a monopoly of scientific brains or even production know-how; he knows, and says candidly, that the Soviets are closing the gap between our country and theirs in the development of the weapons of war.

At the same time, Dr. Furnas sees no reason for alarm or despair. Science is and always has been in the public domain. The only thing we have to fear is complacency. The major goal toward

which we must resolutely bend our efforts is peace.

Under leave to extend my remarks, Mr. Speaker, I include in the RECORD an editorial from the Buffalo Courier-Express of March 27, 1956, setting forth Dr. Furnas' views and commending them as "the proper attitude."

DR. FURNAS NEITHER SMUG NOR ALARMIST

Dr. Clifford C. Furnas, Assistant Secretary of Defense for Research and Development, is to be commended for the clarity and candor with which he discussed the status of this Nation's defenses and the scientific progress being made by the Russians in the military realm. In conceding the advances achieved by the latter, he demonstrated no evidence of alarm, just as in analyzing America's defenses he showed no sign of complacency. This realistic attitude undoubtedly will be welcomed by the American people.

The on-leave chancellor of the University of Buffalo, while denying that the United States is falling behind the Soviet Union, acknowledged that in some military fields the Russians are catching up with this country—in short, that they are closing the gap. At the same time, he made it clear that the Russians are not overtaking the Americans in the development of jet bombers and intercontinental ballistic missiles. Neither country has yet perfected the IBM weapon, he asserted, pointing out that when either does, the result will come close to being an ultimate weapon because of its destructiveness and the difficulty of defense against it.

Particularly to be admired is Dr. Furnas' awareness of the challenge which the progress of Russia in the scientific field presents to this country, and the sense of adventure he finds in keeping America in the lead. His own eminence as a scientist makes him cognizant of the scientific talent of the Americans and their ability to meet and overcome obstacles. Yet he is keenly aware of the fact that there is no such thing as absolute security. While he finds the present situation uncomfortable, he does not look upon it as perilous—though he recognizes that a general spirit of self-satisfaction with our own progress could make it so. His, we believe, is the proper attitude.

Increased Foreign Trade Helps Both United States and Europe

EXTENSION OF REMARKS
OF
HON. THADDEUS M. MACHROWICZ
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 29, 1956

Mr. MACHROWICZ. Mr. Speaker, under leave to revise and extend my remarks, I should like to have reprinted in the RECORD an interesting article which appeared in Switzerland Speaks, a special supplement to the Washington Post and Times Herald of Sunday, March 11, 1956. This publication contained a number of articles, attractively illustrated, covering a wide variety of subjects from Swiss scenery and Swiss history to current day economic questions which confront Switzerland.

It is to the latter that I wish to draw attention in particular. In the article below, the central theme is the importance of dependable foreign markets to the prosperity of Switzerland. Every school child knows that Switzerland is a country that is relatively poor in natural resources but not in the skill of its human resources. These skills, have through history, been employed in the production of fine watches. The sales of these watches in foreign markets have, in turn, been the means whereby goods could be purchased to sustain the standard of living in Switzerland. Indeed, Switzerland and her watch industry has become the classic case of specialization and international trade.

This trade is of benefit to the United States not only in terms of the availability to Americans of fine watches at a good price, but also in terms of production and sales to Switzerland. Virtually every State in the Union sells some items to Switzerland which Switzerland pays for in sales of watches to the United States. I should like to point out in this connection that Michigan in 1954 exported approximately $13,400,000 worth of automobiles, metal goods, and machinery to Switzerland.

It is no secret that in the past 2 years, there have been taken or threatened by the Government that have resulted in worsening of our trade relations with Switzerland. I think it, therefore, a great service that Switzerland Speaks gives a great number of leading Swiss an opportunity to tell their story—in effective and convincing terms. I recommend that all of us interested in expanded international trade relations read and ponder these fine articles.

The article follows:

UNITED STATES ACTION AFFECTED WHOLE SWISS ECONOMY—WATCH TARIFF HIKE JOLTED THE NATION

(By G. Ketterer)

The revival of protectionism in America caught the Swiss watch industry by surprise. Its leaders had believed that the practical value of the Swiss-American reciprocal trade pact had been so clearly demonstrated since 1936 that the United States would be very loath to turn back the clock.

However, the 50 percent increase in watch tariffs in July 1954, made it apparent that protectionists were again winning the upper hand. Later proposals to further restrict Swiss watch trade with the United States have confirmed this trend.

Legislative protectionism to safeguard the American watch industry began in 1913 with the Underwood Tariff Act. It grew more severe in the Fordney-McCumber Act and reached its peak in the Smoot-Hawley Act, which set watch duties as high as 250 percent ad valorem.

Swiss watch trade with the United States was effectively smothered and our watch industry was paralyzed. Since the watch industry was depended upon to earn foreign currency for the Swiss export economy, the crisis soon involved the entire country.

The ensuing stagnation was ended by the Reciprocal Trade Agreement signed in 1936. Between 1936 and 1954, Swiss watch exports to the United States rose from annual average of 2½-3 million units to 8 million jeweled-lever watches a year.

As a result the Swiss watch industry undertook vast programs of expansion. Many millions of francs were spent for new machinery and research and other programs and thousands of new employees were hired.

American industry and agriculture also benefited greatly from this reciprocal trade. United States exports to Switzerland rose from about $7.5 million in 1936 to a current average of more than $160 million a year.

The demonstrated value of this trade program bave the Swiss watch industry confidence. Another basis for our optimism was the belief that the United States watch industry was still enjoying adequate safeguards in duties and rates, which averaged 35 percent ad valorem. On above-17-jewel watches, which were rapidly assuming greater importance in the American market, United States companies were protected by a prohibitive tariff rate of $10.75 per watch.

In retrospect, Swiss industry leaders realized that they had underestimated the full effect of appeals to fear by the rival American watch industry. When President Eisenhower increased the watch tariffs in 1954, he cited defense essentially as the overriding reason for his action. And although this concept has since been carefully investigated and sweepingly challenged by many of the most able people in American economic and political life, the myth still persists that the United States watch industry posesses unique and irreplaceable skills essential to the war effort.

Within 3 months after the tariff increase, the United States Justice Department instituted a suit charging that importers and the Swiss had infringed the antitrust statutes. Some months later, at the insistence of United States watch manufacturers, the Treasury Department reviewed its long-standing interpretation on the question of permitting importers to assemble additional jewels in watches once they had cleared customs.

In the same period the protectionists resorted to still another device when they sought to have the Treasury reverse its directives on what constituted an adjustment in watches. Under the existing interpretation, most Swiss watches admitted to the United States do not require extra payments for adjustments.

The 1954 tariff increases pushed United States duties on watch imports close to the all-time high of the Smoot-Hawley Act. In the following year, imports of watches and movements into the United States dropped 2,636,553 units. In the first 6 months of 1955, Swiss exports of 17-jewel movements, the mainstay of our trade with the United States, fell 16.6 percent.

We feel that any hope for the resumption of normal Swiss watch trade with the United States must depend on a revived world-trade spirit in the United States together with a realistic reevaluation of the extreme claims which have characterized the protectionist drive.

Arms to Israel

EXTENSION OF REMARKS
OF
HON. LAURENCE CURTIS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 29, 1956

Mr. CURTIS of Massachusetts. Mr. Speaker, under leave to extend my remarks, I include parts of a speech prepared for delivery at Temple Reyim in West Newton, Mass., on Sunday evening, March 18, 1956, as follows:

The most vivid impression of Israel following a visit there and to neighboring countries was that here had arisen a modern democracy with a bustling type of machine-age life similar to what one might find in an American community. This remarkable development had taken place in a short period of time, and stood out the more because of the less developed aspect of some of the other areas in that corner of the world.

The next most vivid impression was of the courage and determination of the people who had built up this land, and were taming the deserts and the rocky hillsides, much as American frontiersmen had developed our own country. This courage and initiative is evident in the faces and bearing of the people. They carry themselves proudly as become a people who are making such rapid strides.

A third impression is that here is a small country where intensive efforts are needed to make the land productive, where every acre is important, and where the frontiers are always but a short distance away.

It follows that frontier incidents and border disputes, which might be of minor consequence to a large nation, affect the very vitals of this much smaller nation.

It follows also that such a country is vulnerable to sudden attack, that the lines must be held right at the frontiers, and that defensive arms and measures are of unusual importance.

Difficult conditions now confront Israel as the result of a recent war with her neighbors, terminated only by an uneasy armistice. The country faces blockade of its land communications on all sides. War in the area is threatened, and that is now upsetting the whole world.

Our own Government has authoritatively stated that the continued existence of Israel is a basic tenet of American policy. That policy of course implies much more than existence. It means existence in an atmosphere of peace and friendliness with opportunity for prosperous trade and all the rights which other nations enjoy.

If that be American policy, the time has come for us to reassure ourselves that we are taking the best and wisest steps to implement that policy and to aid in bringing about peace in the area.

Secretary of State Dulles in his speech of last August 26 stated that the United States would participate in an international loan to enable Israel to pay compensation to refugees, and also to make possible irrigation and water development projects, and would be willing under certain conditions to join in collective security measures for the area.

But it seems now that more is needed. I was impressed by the remarks of Senator DUFF, of Pennsylvania, at a dinner held by the Conference of American Jewish Organizations in Washington on January 18, 1956. He stated that now was the time for decisive action in the Near East, and urged that the free world "should guarantee the existing borders between the disputants," and should "offset arms to Egypt by arms to Israel—not to encourage an arms race but to maintain a proper balance between them."

Since then there have been many similar expressions in editorials and articles. The opinion has been expressed that present American policy has not been effective, and only the other day a leading New York newspaper called for a "bold, new policy."

I agree with that, and, speaking only as an individual, urge the following action:

First, the United States should sell defensive arms to Israel in order to maintain the balance of arms in the area and to offset the recent flow of arms from Iron Curtain countries to Egypt. Even if help from the outside could be expected in case of aggression against Israel, arms would still be necessary to ward off immediate attack and until effective help could arrive.

Second, the United States should furnish no arms to Israel's neighbors so long as they refuse to negotiate in good faith for peace.

Third, the leading nations of the free world should offer a security pact to Israel which would be open also to her neighbors and if this cannot be arranged, then the United States should make such an offer. The Tripartite Declaration of 1950 is only a declaration, and should be backed up by a more definite commitment, which only a pact or treaty can provide.

Fourth, in view of the fact that the Tripartite Declaration contemplates the possible use of force, congressional authorization should be sought by the request for passage of a Formosa type of declaration, giving advance authority for military measures in a defined area under defined conditions, if later found necessary.

Finally, the policies announced by Secretary Dulles in his speech of August 26 last, referred to above, should be implemented and vigorously carried forward.

This is the type of bold, new policy which will bring the greatest benefit both to the United States and to the Middle East area. It is also clearly in the interest of the Western World to aid and preserve this Western-oriented democracy, this bastion of freedom, and outpost of the free world. This policy will sustain and preserve a nation with which the United States has had mutual friendship since its birth as a Nation, and in whose development the United States and her citizens have played such an important part.

This is a dynamic program which will answer the charge that our policy has been indecisive, and which will go far to assure peace in the Middle East.

American Prosperity and Capitalism

EXTENSION OF REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1956

Mr. MASON. Mr. Speaker, the average family income in the United States was estimated at $4,200 in 1954, according to figures compiled by the Bureau of the Census. This figure was $300 higher than in 1952. This 7 percent gain in family income since 1952 largely reflects a continued rise in wage rates and take-home pay for workers in most major industries.

Our American capitalistic economy is both the wonder and envy of the world. It enables us to enjoy the highest standard of living of any people on earth—much higher. Yet there are some people who would exchange our own proven successful capitalistic system for a socialistic system that has failed wherever it has been tried.

For the benefit of those few Members of Congress who favor more centralized Government control than we have already, a little more socialism than we have already as a result of the New Deal program and its advocates, I extend as a part of my remarks the following editorial taken from the Saturday Evening Post of March 31, 1956, entitled "There's No Patent on Our People's Capitalism":

THERE'S NO PATENT ON OUR PEOPLE'S CAPITALISM

(By John Bird)

It's a shame that this age of electronic gadgets hasn't produced some dandy little device with which we could tune in the mental gymnastics of the various Soviet delegations of farmers, housing experts, and journalists that have been swarming over the United States in recent months, their jolly smiles outwardly reflecting the Geneva spirit.

The comrades haven't talked about their feelings, but we doubt that even the most doctrinaire among them failed to observe that our economy is somewhat different from the system defined as capitalism in their textbooks. And they must have noted that the United States variety currently is delivering to 164 million Americans the best all-around living that any people ever has enjoyed.

It is easy for visitors to observe the tangible results of our amazing, highly mechanized production system. They have seen some of the 50 million chromium-festooned automobiles which crowd our 3,500,000 miles of roads and streets. We're sure that they got the point that many of these cars are driven by members of our sweated proletariat on their way to capitalistic factories, shops, and offices, where roughly 65 million have jobs at the record average wage of $77.11. On virtually every once-vacant lot the comrades saw new homes going up at the rate of 1,300,000 a year, more than 10 million since the end of World War II. And they may have noticed that most of these new homes are equipped with the newest labor-saving gadgets that have made servants rare in the United States. Also, the vistors may have been told—although we doubt that they believed it—that the majority of new homes are being built for workers.

On our farms the visitors could see a few of the 4⅓ million handy tractors which symbolize our modern agriculture, a mechanized, family-type agriculture, so productive that the biggest problem of our farmers, who make up only 13.5 percent of our population, is the disposal of chronic surpluses.

All in all, the comrades could find here more bathrooms, TV sets, food freezers, telephones, automatic washing machines, air-conditioning units and all the other items that go into our good living than exist in all of the rest of the world.

But we doubt that they saw a single tall silk hat.

If the visitors like statistics, they must have found it baffling that in a nation where Wall Street is reputed to call the turn, the average family now has an income above $5,000, before taxes, while only 3 percent of the families have incomes over $15,000. There must be a puzzle for them in our economy, which, without benefit of 5-year plans, has expanded to the threshold of a $400 billion gross national product—perhaps 3½ times that of the Soviet. They must have envied the apparent ease with which our broad-based system turns out a flood of the necessities and the nicieties of life, and at the same time gives us more time to enjoy them.

Obviously, today's United States economy is as far removed from the Marxian concept of capitalism as the modern atomic scientist is from the Neanderthal firemaker. With remarkable speed in recent years it has evolved into a new kind of "people's capitalism" in which the broad mass of people themselves, through their savings, pension funds, investments and insurance, provide much of the capital, as well as the labor, skill and management for our productive enterprises—a system in which the workers themselves are their own best customers.

The visitors from behind the Iron Curtain are perfectly free to copy the secrets which energize our system. We'll be glad to give them blueprints of the process. It isn't a complicated design—in fact, you can put the main principles on a post card—points such as freedom of belief and speech, free competition for jobs, markets and profits, free elections, clear limitations on the powers of Government, and so on.

No subversion or conspiracy is necessary to spread the United States system, and we believe it is spreading and holds out the best promise for the underdeveloped nations of the world.

Constitutional Role of the President

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 26, 1956

Mr. DOYLE. Mr. Speaker, under unanimous consent heretofore granted me so to do, I herewith call to your attention and to the attention of my colleagues the following editorial which appeared in the Christian Science Monitor for Tuesday, March 20, 1956:

CONSTITUTIONAL ROLE OF THE PRESIDENT

(By Joseph C. Harsch)

WASHINGTON.—When President Eisenhower said in his public speech of availability for a second term that many of the things customarily done in the past by Presidents "can now be done equally well by my close associates" he was referring partly, but not entirely, to the ceremonial activities of the office.

But implicit and explicit in what was said then, and has been said on the subject by others in recent times, is a recognition of a change which has been taking place in the role of the President since well before the beginning of the Eisenhower administration, but perhaps has been proceeding faster since Mr. Eisenhower assumed the Presidency, and faster still since his illness.

The reasons for the change are appreciated if we consider the contrast between what the United States and the functions and the responsibilities of its Federal Government were when William Howard Taft was President and what they have become over the intervening years.

In Mr. Taft's day (the last full Presidency before World War I) the United States was a third-rate military power, with minor foreign interests and negligible overseas responsibilities. Those were the days of the "Pax Britannica" when the United States existed comfortably and cheaply behind the all-pervasive security of a British fleet which "ruled the waves" of the world and kept the peace.

Those were also the days when the Federal Government in Washington presided gently over the internal affairs of the country. The range of its domestic activities is attested by the fact there was then no Department of Health, Education, and Welfare, a combined Department of Commerce and Labor was only 6 years old, and the Department of Agriculture was only 10 years old.

The Federal Government in those days was only on the threshold of the assumption that it had proper functions outside of the national defense, the provision of a uniform coinage, a system of courts, and postal service. The idea that it might also manage such things as prosperity, the relations of employers to workers, and the quality of public education was novel, radical, and a long way from being generally acceptable.

Today the United States is the first military power in the world, its foreign responsibilities are phrased in a series of interlocking alliances which literally girdle the globe, and the Federal Establishment not only manages and controls the price of every major farm commodity but concerns itself even with the relationship between political views and employment.

In Mr. Taft's day the President could easily know everything going on in the Federal establishment and make every important decision which came along in addition to performing the ceremonial functions. These functions were often a welcome relief from boredom.

In present days no one man can even know all of the factors involved in the major decisions, let alone the existence of the lesser problems.

The change has, inevitably, bred a vast Federal establishment and a rapid and extensive dispersal of the powers of responsibility and decision. It could not be otherwise. In Mr. Taft's day, the Presidency was a part-time job for one man. It has become a full-time job for hundreds.

The present condition was not contemplated by the Founding Fathers, nor was it provided for in the Constitution which they set up.

The main present condition which was not contemplated in the existence of high officials of Government exercisting vast powers of planning and decision who are not directly answerable to the voters on election day or effectively subject to the direct control of the Congress between elections.

The President is the elective link between the voters and the managers of the great departments and agencies of government. But as powers of responsibility and decision flow from the President to the nonelective managers, the gap widens between them and the citizenry.

Today there is a trend toward the fragmentation of the Presidency. It has not been brought about willfully, or suddenly. But it has happened. There is a flow of powers of responsibility and decision from the President to the managers of the great departments and agencies.

Congress retains a grip on these men through its control of the purse strings, committee supervision, and the power of investigation. Perhaps this type of control can provide adequate continuing elective authority over these nonelective men. But at the present time they tend to become more autonomous of both White House and Congress.

This was the trend of development in the Roman Empire. Britain blazed a different trail in its efforts to retain elective control over the great departments of government. It evolved the parliamentary system of Cabinet members chosen from the elected membership of the legislature.

The United States can reinvigorate its own peculiar solution of the problem of maintaining elected control over the nonelected bureaucracy. Unless it does it might find itself perforce having to choose the British road as the only way of avoiding a journey down the old Roman road.

The Communist Conspiracy

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Thursday, March 29, 1956

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, the text of an address given by me before the Inland Daily Press Association in Chicago, Ill., on February 27, 1956.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

There are many reasons why it is a pleasure for me to speak before the Inland Daily Press Association. It is always a pleasure to appear on a program with our Indiana editor, and my good friend, Stew Riley.

There is a special reason why it is a great satisfaction for me to speak today to this association of newspapermen of our Middle West.

These are not ordinary times. Many things which we have taken for granted are suddenly in jeopardy. Who in the United States, from the days of William Zenger, doubted that freedom of the press had been won for all time? Then suddenly the long hand of Communist power reached out, and seized a quiet Indiana reporter named Bill Oatis. They put him in a Communist jail, subject to we know not what tortures, and kept him there for years, regardless of the power and might of the United States.

Today, we know an ingenious and ruthless enemy of freedom seeks to destroy everything we stand for. But as the danger increases, we learn the old lesson, that we never truly value everything in time of security as we value it in the time of danger.

Even a few years ago, freedom of the press was a legal right, a high point in history, a matter of professional pride—something we could take for granted.

Today, freedom of the press is coming to be as real to all of us as it was in the days of Peter Zenger and John Milton, who won our freedom for us in days of darkness and bitter hate.

About a year and a half ago, I sat in a Senate hearing room and listened to Gen. James A. Van Fleet tell our Subcommittee on Internal Security, how, during the Korean war, we could have beaten Red China, broken the back of communism in Asia, and turned backward the lava flow of communism, for the first time since it erupted in Moscow in November 1917. Standing before a map with a pointer in his hand, General Van Fleet showed us the single railway along the North China coast, which was the only railway the Red Chinese had, to move their troops to Korea and then to supply them. The railway from North China could have been bombed continuously by our Air Force throughout the last 200 miles of its journey to the front.

On our side, the general said, "We had command of the water and air. We had and still have unexcelled bases in Japan and Korea for redeployment. We had a base in Japan fully at our disposal. We had the flank protected by our Navy and all this base here to destroy a Red Chinese Army far from home, well out on the limb, and in great difficulty all the time. That is why I say this was the right place and at the right time, with the wonderful nation of the Koreans, the right ally."

Of course, every one of my listeners knows what happened. Our American boys were not permitted to defend themselves by striking the enemy at his supply lines, his bases, and the bridges across which he sent his troops 24 hours a day.

Another high commanding officer in the Korean theater, Gen. George E. Stratemeyer, described the situation in these historic words, "We were required to lose." Gen. Mark Clark, Adm. C. Turney Joy, and Lt. Gen. Edward M. Almond, gave our subcommittee more details on this planned disaster. Together with General Van Fleet, they told us how the United Nations violated its own fundamental principle of collective security, when it refused to accept the divisions offered by Chiang Kai-Shek to fight against the aggressors in Korea. Our military leaders showed us how Red China's armies were originally freed to move toward the Yalu, when our Seventh Fleet was ordered by our President to blockade Chiang Kai-Shek on Formosa so he could not strike Red China's flank on the mainland. They showed us how we even put a limit on the number of South Korean soldiers who would be allowed to defend their own country. Of course, that meant more Americans were bound to be killed.

You remember Samson, who was so strong that no one could overcome him, until some

one he loved and trusted cut off the long hair, which was the source of his strength. Like Samson, America was too strong to be defeated except by enemies from within.

All of these limitations and restrictions, all of this policy of shearing Samson's hair, was contrived in Washington. As General Almond expressed it, "It is bad enough to have to fight the enemy; it is terrible to have to fight both the enemy and those that you are supposed to have support from."

We know the excuse given us by the administration in Washington, which conducted itself so that it seemed like an enemy to its own troops in the field. The excuse was that if we allowed American soldiers to fight, as they have always fought at every other time in our history—if we allowed them to fight to win—it might cause the war to spread beyond Korea.

Did this strategy of cutting Samson's hair keep the war from spreading? Or did we really help extend it? If we had whipped Red China in Korea, would she have been able to move against Indo China? If we had whipped Red China in Korea, and released Chiang's forces for an attack on the mainland, would the Red Chinese be building airfields and assembling fleets today, for an attack across Formost Straits?

These questions answer themselves. But what do they have to do with the subject of my talk here today, namely, "Communist Infiltration of the Press?" They have this to do with it. General MacArthur and every one of the Korean commanders who testified before us unanimously believe that the Red Chinese would never have dared even to enter the Korean war unless they had been told of our "Samson's hair" policy in advance.

Who told them? We don't know for certain who gave the Red Chinese this information, so vital to the course of recent world history. We do know the Communists always cover their penetration in Government offices with parallel penetration into the press. Thus a stream of slanted reports adds to the confusion, while espionage by their agents in the press gives them much unpublished information about what their opponents intend to do.

In London, the head of the American desk in the British Foreign Office was a man named Donald MacLean. "His hand fingered all the crucial inner secrets of the Western Alliance" according to an acknowledgement made on the floor of Parliament itself. Guy Burgess was at the center of British-American secret negotiations in Washington. Today they are both proven Soviet agents living in Moscow.

Fearless reporters in the British press have been tearing away the veil of official secrecy around Burgess and MacLean, since they fled east in 1951. Their findings were finally confirmed by the disclosures in Australia of Vladimir Petrov, a former Soviet spy. From these findings, we learn that MacLean and Burgess were open Communists during their undergraduate days at Cambridge in the 1930's. Even before they left the classroom they traitorously joined, not the Communist Party, but Soviet Intelligence, and provided themselves with a cover by pretending to have abandoned Communism. Note the interply between Government and press. The first job that this concealed Soviet agent, Burgess, obtained, after he left the University, was on a newspaper. He was again trying to get a newspaper job in 1951, when his orders came to head for the Kremlin.

Somewhere in this planned chaos, the Communists were fully informed of our State Department's policy to protect Red China.

How could Americans have accepted this fool's policy? Red China was in the war, not outside. The only question was whether we should attack an enemy already fighting us, or turn the full destructiveness of war upon our friends and allies, the Koreans. This decision to protect Red China made it necessary to bomb the lands and burn the buildings of the brave Korean people, while the territory of Red China was made a privileged sanctuary by our own Government.

Now let's turn the clock back to 1939, when Adolph Hitler was trying to decide whether he would start World War II. The decisive factor in his thinking was this: if we struck toward the West, would he be safe in the East? Would the Soviets be with him or against him? Stalin himself was puzzling over the same question. Whose side would he choose? Would he go along with Britain, France, and Poland in an alliance which could have stayed Hitler's hand, or would he ally himself with Hitler and let loose the Nazi hordes?

Before he made his decision, Stalin had to know what Japan might do. One day, word came to him from Tokyo that Hitler was proposing a German-Japanese alliance against the U. S. S. R. So Stalin moved toward Berlin with a gesture of friendship. That friendship produced the Hitler-Stalin Pact, which started World War II. The man who told Stalin about Hitler's negotiations in Tokyo was one Richard Sorge, who had gone to the Far East years before with the cover of a reporter for Frankfurter Zeitung.

Sorge was the grandson of a man who had been secretary to Karl Marx. He had been an undercover Communist since 1927. The Communist spy ring he organized in the Far East was one of the most deadly in the history of the world. It included Ozaki Hozumi, journalist; Branko De Voukelitch, a journalist; Guenther Stein, a journalist; Kawamura Yoshio, a journalist; Wawi Teikichi, a journalist; Funakshi Hisao, a journalist; Nakanishi Ko, a journalist; and Agnes Smedley, a journalist. At one time or another these men and women had written for Havas News Agency, the Manchurian Daily News, the Berlin Tageblatt, Shankhai Mainichi, the Rengo News Agency, the Christian Science Monitor, and the New York Times.

Let me dwell for a moment on the case of Agnes Smedley. It is very significant for a number of reasons.

In 1949, the Pentagon published a statement about the Sorge spy ring, based on reports from Major General Willoughby, who was General MacArthur's chief of intelligence in Tokyo. Agnes Smedley was named in this report. She made a tremendous display of outraged indignation. Harold Ickes, who had served so long in the Roosevelt Cabinet, was one of the many powerful people who rushed to her defense. Someone in the War Department backed down, in a shameless display of cowardice, and withdrew the charges against her. Smedley herself threatened to sue General MacArthur, but when General Willoughby publicly stated that he was responsible for the statement that Smedley was a Soviet spy, and he would be delighted to confront her in a lawsuit, she forgot all about her indignation.

She fled to England and died there on the eve of the Korean war. Then it was learned that this "innocent, abused" American journalist had left her ashes and all that she possessed to Chu Teh, the general who was to lead his troops against Smedley's American countrymen only 6 months later.

On the first anniversary of her death, Smedley's ashes arrived in Communist Peiping. An immense celebration was held in her honor. The Communist Kwang Ming Daily contained a whole page of tributes to her from the most important of Red Chinese writers, who praised her without stint for exactly what General Willoughby had said she was, an underground Communist agent through her entire adult life. The Communists boasted of how she had served them as a world propagandist, as an apologist for the Red Chinese army, as a raiser of money for Communist causes, and as an underground agent who used her apartment to hide other agents and send them on their way as couriers for the Communist conspiracy.

Now let's come back a little nearer to the present. You remember, of course, the Australian spy scandals of 1954. You remember how Vladimir Petrov unmasked the Soviet spy ring there. You remember too, that a Royal Commission on Espionage issued a report based on the documents Petrov had given to it.

Here is what that report said on the subject of journalists:

"The interest of the MVD in journalists, and in particular in members of the Parliamentary Press Gallery at Canberra, appears clearly from the material before us. The principal reason for that interest is obvious. Parliamentary journalists are in constant touch with ministers and highly placed officials. They frequently receive 'off the record' and background information, sometimes of an important nature.

"It is apparently the worldwide Soviet practice for Tass representatives to be recruited espionage agents. It certainly was so in Australia, where Nosov, Pakhomov, and Antonov—in succession the Tass men here—were all active MVD cadre workers.

"The study of journalists for the MVD was primarily the task of the Tass representative, who could without exciting attention mix freely with journalists, and would be naturally accepted by them as one of themselves. He is thus in the way of gaining access to such information as they have and may be able to use them as at least unwitting informants."

And only a few short days ago Yuri Rastvorov, another world-famous defector from the Soviets, told our subcommittee that 80 to 90 percent of Tass correspondents are agents of Soviet intelligence.

Against all of this background, which I have detailed to you here, the Subcommittee on Internal Security began last summer an investigation of its own into Communist infiltration of the American press.

Our first witness was Winston Burdett, a well-known commentator for the Columbia Broadcasting System, who told us that he had joined a Communist cell on the Brooklyn Eagle in the 1930's. He said the Communist Party had ordered him to become a European correspondent for the Eagle. Why? He told us—in order to perform espionage service for the Kremlin. He also gave us the names of 16 persons whom he had known as Communists, when he belonged to the Brooklyn Eagle cell.

Who were some of those Communists, and what happened to them? One was Alvah Bessie. He went to Hollywood and ultimately became one of the famous "Hollywood Ten." Another was Nat Einhorn. He is now public relations man for the Embassy of Communist Poland. Another was Charles Saul Lewis, whose story is one of those juicy little tidbits we are still finding as we open up new rat holes in this shady business.

Lewis was a $75a-a-week copyreader in 1943, when Elmer Davis' OWI put him in its New York office, with responsibility "for direct implementation of United States policy toward allied and neutral countries and the furthering of our aims toward the enemy." Seven months after he landed on the payroll, OWI tried to increase Lewis' salary by nearly 50 percent. The Civil Service Commission raised a howl of protest, but Lewis seems to have known the right people, so the raise went through. A short while after that, he was sent to San Francisco as the personal representative of Elmer Davis to reorganize the San Francisco office. Among his other responsibilities, Lewis "supervised the various language control desks on the output of the Voice of America." He had never been a foreign correspondent. He knew no foreign languages at all when he controlled these language control desks. But there seems to have been something about

him, nevertheless, which appealed to the people who ran OWI.

What happened to this former member of the Brooklyn Eagle Communist cell when Germany surrendered? The Office of Military Government took him to Berlin and in a few months he was formulating and directing the implementation of policy governing radio broadcasting in Germany.

German newspapers and political leaders began complaining that the policy our friend Lewis formulated and directed was soft toward communism. The day of the Berlin airlift arrived. It was obvious to anyone that at that moment America needed every possible facility to bring words of freedom and encouragement to the German people. Obvious, that is, to everyone but the man who formulated and directed our broadcasting policy. His method of supporting his country's policy at this perilous moment was to ship a brand new 40,000-watt transmitter out of Berlin itself, just when it was ready to double our broadcasting capacity. Security officials finally caught up with Charles Saul Lewis, but he resigned from Government service rather than face a hearing.

So he came home and returned to private industry. When we put Lewis on the witness stand last summer, he was an employee of a radio station in rural New England. His salary was $70 a week, or $5 less than he was making as a copyreader when OWI clasped him to its bosom back in 1943. Lewis admitted he had been a Communist in the Brooklyn Eagle cell, but he asked us to believe he had renounced communism before he joined OWI, and long before he hustled that radio transmitter away from the Berlin airlift.

Congressional committees are continuously digging out stories like this about Elmer Davis's OWI. It's not hard to understand why Elmer spends so much time in print, on the platform and on the air trying to put congressional committees out of business.

Another witness in our investigation of Communists in the press was Ira Henry Freeman of the New York Times. Mr. Freeman also acknowledged that he had been a Communist in the past, but denied that he was a Communist at present. He gave us the name of the man who had been head of the Times Communist underground in the 1930's. That man bore one of the most famous newspaper names in the United States, but he is dead now. In deference to his family, who are good Americans, the New York Times attorney asked us to leave his name out of public hearings. Against all precedent of the subcommittee, we granted the Times request.

What did the Times do? It published an editorial denouncing the chairman of our subcommittee, Senator EASTLAND, and also the subcommittee counsel, and myself, for daring to call to the witness stand Communists who had been, ever so remotely, connected with the Times. The Times declared that it had been singled out for this attack. Why? Because, the Times said, it was against "many of the things for which Mr. EASTLAND, his colleague, Mr. JENNER, and the subcommittee counsel, stand."

Why did the Times consider it an attack against the Times, when the subcommittee called to the witness stand, certain Communists and ex-Communists who are or had been employed by it? We thought we were attacking, not the New York Times, but the Communist apparatus. We thought the Times would be grateful for the subcommittee's help in getting evidence, under oath, of what they should certainly wish to know.

Why did the Times feel that it was singled out? It is interesting to follow that question. Did the Times mean that other New York newspapers employed as many Communists as the Times employed, but had not been mentioned? If that is what it does mean, will the Times give the subcommittee the names of those Communists on other New York newspapers? But if the charge does not mean this, if the Times has no information about Communists on other New York newspapers, then what is its purpose in trying to persuade its readers all over the world that it has been singled out? Does it by any chance wish us not to subpena those whose Communist activity we have information about, if they are or had been employees of the Times?

The 22d witness was a man who worked on the Times 1 day, and next day became managing editor of the Communist Daily Worker. He told us in vivid detail how the Daily Worker was under the absolute daily discipline of Gerhardt Eisler, the comintern's top agent in the United States. This witness, James Glaser, is presented employed on the New York Post. He has not been a member of the New York Times staff for 21 years. Now, seriously, is it an attack on the New York Times to put this man on the witness stand? Is it an attack on the New York Post to put him on the witness stand? Is the Daily Worker a Communist paper or is it not? We think the testimony James Glaser gave us was vitally important in further uncovering the international Communist conspiracy. Should we have refused to hear him in deference to an employer of 21 years ago?

The 24th witness was Clayton Knowles, who is presently a Times reporter. He told us that he is not a Communist now, but he had been a member of a Communist cell on the Long Island Daily Press in the late 1930's. He gave us important information about that cell. Was it an attack on the New York Times to take his public testimony about a Communist cell on the Long Island Daily Press? Would the Times frankly say it preferred that we let Clayton Knowles testify in secret as a "concealed accuser" of the alleged Communists on the Long Island Daily Press?

The 27th and 28th witnesses were John T. McManus and James Aronson. Both were former Times employees, but they are presently the moving spirits in a weekly newspaper which goes under the title of the National Guardian. And what is the National Guardian? The National Guardian is a direct link with the American brainwashers and torturers, who serve the Chinese Red Army. The National Guardian was the American end of the unspeakably treasonable operation conducted inside Communist China by John W. Powell and his confederates. Powell edited and published the China Review, which the Chinese Communists described to American prisoners of war as "our magazine." American prisoners of war were forced to study and approve the vicious and anti-American lies in Powell's China Review under pain of torture, starvation and death. The National Guardian, was Powell's American agent. Through the Guardian, the Chinese Communists were able to bring pressure on the wives and mothers of American boys held prisoner in Red China. Was it an attack on the New York Times to call John T. McManus and James Aronson to the witness stand? Does the Times mean we should have ignored this service to Red China, in deference to them?

Here are some additional facts which we did not put into the record. I am sure that they will be especially interesting to this audience of newspaper people. You all remember the long hard fight to break the Communist control over the New York Newspaper Guild. You remember that that fight was won in 1947, when John T. McManus was defeated for reelection as president of the New York Guild. "Plain Talk" reported the vote of Times employees in that election. Here is the score, and I quote: "The New York Times (employees) gave the pro-Communist candidate 516 and the anti-Communist candidate 256."

Now let me generalize a moment on this whole question of Communist infiltration of the press. I have told you the facts about Guy Burgess in Washington and London, the Sorge ring in China and Japan, and the Australian apparatus. I have told you the facts about the men who were Communists with Winston Burdett in the United States. What conclusion can we draw from these facts? The conclusion is obvious. The Communist conspiracy is and always has been interested in infiltrating the press, because the press is important. Also a press cover is as good a cover for a Communist agent as any which could be found. Journalists have access to information which never reaches the hands of other citizens. They have opportunities to divert, distract, and misguide public opinion, which are never given to other citizens.

So what should be done to attack this problem? Does it clarify the issues to say that the Subcommittee on Internal Security is against the press, if we hunt out Communist agents who are planted among you? Should those who believe in an independent press raise the cry that the subcommittee is against the press itself? That's the kind of thing some people said back in 1939, when the Dies committee went after Communists in labor unions. They said that Dies was attacking labor itself, didn't they? In the end the CIO had the courage to clean the Communists out of its own ranks, but 10 years had been lost.

What happened when our subcommittee began to hunt Communists in the IPR? We were accused of being the enemy of scholarly research. Guenther Stein and Agnes Smedley were among the IPR "scholars" we were "persecuting." So were Alger Hiss, Harry Dexter White, Frank Coe, Lauchlin Currie, Owen Lattimore, and a whole host of others whose shameful story we put into the record. When we dug out a barrel full of Red agents who had been planted in the faculties of American universities, some people said we were against education. When we dug a barrel full of Communists in the United Nations Secretariat, some people said we were against the United Nations. I don't believe the members of the Inland Daily Press Association think the Subcommittee on Internal Security is against the American press, when we pull the covers off Communists who are hiding within that press. I believe that the members of the Inland Press Association and the great majority of American newspapermen are just as anxious to expose the Communist traitors who have crept in among them as are all other good Americans, regardless of the callings they follow.

I have spoken to you of the Communist efforts to penetrate the press, because that is where your interest lies. We know also of Communist intrigue against our schools, our churches, our labor unions, our business enterprises, and our financial institutions. We know only too well of the unremitting effort to penetrate our political parties, and our Government agencies.

I have spoken of our country as a fortress whose citizens were so just, no decent men wished to attack it, and whose walls were so strong no evil men dared try. Today we are in danger from those who would undermine our walls, and send saboteurs to mingle with us, to destroy us.

It is a lonesome road for those who try to uncover the trail of communism and end its evil power. Every one who has ever touched the Communist evil has paid a high price. But we are beginning to see we are all threatened. We are all needed for defense of the citadel.

We love our country. We would give our lives to save it from destruction. We can save our country against this strange new evil when every American is ready to fight

the enemy on his doorstep and ready to work with all other Americans who are defending their own. Then we shall all be soldiers fighting together, to drive this unclean evil force from our land.

We Need More Camping Places

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 29, 1956

Mr. METCALF. Mr. Speaker, on March 16 the San Francisco Chronicle, one of the leading newspapers of California, published an editorial entitled "We Need More Camping Places." It emphasizes the need for increased financial support for recreational facilities of our national forests, to maintain them adequately and to expand them to meet the growing needs of our citizens. I believe this is another demonstration of public support for the type of legislation embodied in my bill, H. R. 1823, which would, among other things, provide for a continuing reinvestment of national forest revenues into recreational facilities of the forests which are today, more than ever before, "the people's playgrounds." I am hopeful that a hearing can be scheduled soon on H. R. 1823 so that this much-needed legislation can be acted upon. The San Francisco Chronicle editorial follows:

WE NEED MORE CAMPING PLACES

Spring is in the air, vacation time will soon be here, and millions of American families will start out on the search—too often in vain—for a good camping spot.

The sad fact is that in California and throughout the Nation the demand for recreation facilities at United States Forest Service campgrounds outruns the supply. Pinchpenny neglect by Congress has left many Forest Service camps in a state of disrepair. Despite the growth of population, the California National Forests have actually suffered a net loss of some 700 camp units in the past 5 years. The Forest Service simply lacks money to keep up simply facilities; a table, a parking space, a garbage can, a toilet.

Many campgrounds have had to be closed by the health departments of California counties because of water pollution and lack of sanitary facilities. People looking for Forest Service camps and finding them full up, or closed up, are forced to camp along roads and trails at unsupervised sites. Such camping results in additional stream pollution, health hazards, forest fires, and erosion of watersheds.

The National Forests are the birthright of the people, and they should not be deprived of the wholesome recreation in natural surroundings which the Forest Service camps offer. These facilities are not the plush, room-service-and-table-d'hote amenities of some of our National Parks; mostly they are simple camping areas under the trees with a safe water supply, stone fireplaces and toilets provided.

Recently the House voted to appropriate $15 million for new facilities in the national parks. That is, of course, gratifying. Yet for operation of all the United States Forest Service recreation facilities in the country, the House has allowed only $2,140,000. That is woefully inadequate.

The Forest Service says it needs $2,768,000 a year to maintain the recreation facilities it now has. In order to keep up with visitor demand, it needs around $24 million to build new facilities.

In California alone, some $2,650,000 is needed to repair and expand Forest Service camps. Contrast this with the $350,000 which California's 18 national forests are due to get under the House budget.

In the coming years the California State parks and the national parks are planning to emphasize daytime use; thus overnight visitors and summer campers will be turning more and more to the national forests.

When the Senate Appropriations Committee considers the Forest Service budget next week, it should wake up to the responsibility of Congress for keeping the forests open to the millions who are entitled to enjoy them.

Good News in a World of Tension

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 20, 1956

Mr. DONOHUE. Mr. Speaker, at this time I should like to include a very timely editorial entitled "Good News on the Polio Front," which appeared in the March 20 issue of the Worcester (Mass.) Evening Gazette.

The article emphasizes the great blessing of the polio-vaccine discovery and the substantial promise it gives for the early elimination of this dread disease which has been such a terrible scourge upon the human race, particularly children. In a world that seems to be threatening itself with self-destruction through atomic warfare, this is good news that serves to remind us that the good and true objective of science is to preserve and progress a civilized society, not destroy it.

The article follows:

GOOD NEWS ON THE POLIO FRONT

According to Secretary of Welfare Folsom, the latest figures show that the rate of paralytic polio is less than one-fourth as high among youngsters who have had Salk vaccine as among those who have not.

According to United States Surgeon General Leonard Scheele, Massachusetts, despite its late decision on the matter, should get plenty of vaccine to complete 2-shot vaccinations for all of our 1.4 million eligible children and expectant mothers.

What this means, of course, is that never again will this State have to go through another horrible year like 1955, when over a thousand cases of polio resulted in a virtual epidemic. Barring unforeseen circumstances, 1956 should see only a scattered few cases of the disease in Massachusetts. Subsequent years may see the disease practically wiped out, just like diphtheria and smallpox.

In the midst of the unhappy news from so much of the world, this is an item that is due cause for rejoicing. Polio, the dread killer and maimer of children, has been practically conquered at last. We can never be fully aware of what that will mean to us and future generations.

Christian and Jew

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. KEATING. Mr. Speaker, a most important week for Christians and Jews is drawing to a close. For Christians this has been Holy Week. For Jews this week has marked the beginning of the Passover. At a time when the two faiths are under fire in all corners of the globe, these are days for the most solemn rededication to respective religious principles and to efforts to achieve interfaith harmony.

We must draw together today on the bases of our similar principles in ethics, dignity, decency and goodness to the end that the forces of godless communism may be turned back. The religions of the world must play a dominant role in the quest for freedom and peace. They form the only firm foundation upon which the future of the world can rest—a foundation in the hearts and souls of men.

Only by following the principles of our religious teachings will we be able to gain the peace which is such an important thought in the minds of all who celebrate the Holy Week or the Passover this week. Under leave to extend my remarks, I include a timely and thoughtful editorial from the Rochester Democrat and Chronicle of March 26, 1956. The similarity of the task before all Christians and Jews is clearly set forth in this fine editorial:

CHRISTIAN AND JEW

This is Holy Week for Christians, and the beginning of the Passover for Jews.

For Christians, it commemorates Christ's triumphal entry into Jerusalem, and the glorious and tragic days that followed. For Jews, it recalls the beginning of the historic deliverance of their people from bondage in Egypt.

For both faiths, it is a time of trial.

Christianity's principles, pivoting upon the dignity of man, are threatened by mighty forces which worship expediency and materialism, and consider man unimportant as against the "sacred" state. This condition is called the "cold war." Its threat to the Christian is real, for Christianity and stark materialism cannot be bedfellows.

The Jew, patient, still persecuted in many lands today, also is watching the growing threat by mighty forces. In his case, the threat is directed at his spiritual homeland, the tiny State of Israel. It is beginning to shape up as one of the greatest and most macabre jokes in history that some people should actually believe the cries from the great league of Arab nations with their 40 millions of people, that they are being threatened by the midget republic of fewer than 2 million inhabitants.

In Rochester these days, Christians and Jews will worship in their own ways, in harmony.

But all should reflect upon the vast similarities in principles, in ethics, in dignity and decency and goodness in their two faiths. They must stand together in greater strength and tolerance and progressiveness today than ever before. For as against the millions of

people gathered, willingly or unwillingly, to the banners of the dictators, the Christian as well as the Jew is a member of a minority group. The world is in a deeper struggle today than most of us are willing to recognize.

Water: Our Thirsty Economy Needs a Dwindling Resource

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 29, 1956

Mr. METCALF. Mr. Speaker, the following article, from the September 1955 issue of the Democratic Digest, calls attention to the most important of our national resources—water.

WATER: OUR THIRSTY ECONOMY NEEDS A DWINDLING RESOURCE

In Asia, India and Pakistan have exchanged harsh words over the 1,500 mile long Indus River which waters both their lands. In the Middle East, Israel and Syria have raided each other's frontiers in a dispute which is kept bitter by the desperate need of both countries for the waters of the Jordan River. In Saudi Arabia, the rulers have permitted foreigners to come in and drill for oil, so that their desert will be broken by a few oases forced to blossom by the wicked foreigners.

Southern Italy has traditionally suffered from drought and the poverty it imposes, while on the luxurious resort island of Capri, water must be brought in by tankers.

From the dawn of recorded history, through the Biblical days when Joseph predicted 7 years of drought and famine for the people of Egypt, down to our time, men have prayed and fought for the water that makes soil productive.

Even in the United States, the land of proverbial riches, water has become a problem. Peter Drucker, writing in Harper's magazine, has predicted that it will be one of the "Eleven Coming Issues in Politics," because, as he says:

"* * * we are living off our water capital—running the risk of repeating with our water resources the orgy of destruction we indulged in with our soil. * * * Yet we continuously pour new population and new industries into areas of marginal water supply, inviting disasters that we should have experience enough to forestall."

The Agriculture Department confirmed Mr. Drucker's analysis with its own dryly factual report of the water scarcity in the West, where the situation is most acute. "The general water supply is as low * * * and as poor as at any time in the past 50 years." The Department's forecast: The West could expect its water supply to continue to decline in 1955.

This appraisal probably came as no surprise to the West. For 5 years now, the situation has been growing increasingly worse. With recent droughts accentuating the problem, pleas for Federal aid and for some long-range planning have been heard in almost every major western agricultural and industrial area.

Recently banner headlines in the Denver Post proclaimed: "Water Storage Hits New Low." A picture extending across the entire front page showed a city reservoir virtually dry, holding only 25 percent of capacity.

"Los Angeles," reports the Kansas City Star, "is limited in its growth absolutely and entirely by the amount of water available." In fact, the Los Angeles water shortage is so acute that the city is considering one plan to bring water in from 300 miles away at a cost of $1.3 billion for the dam and aqueducts. In Texas, Fort Worth editorials talk of importing water from the faraway Mississippi.

The West has been rapidly eating into its available water reserves. Ground water is being withdrawn from the high plains of west Texas at a rate of 1.4 billion gallons a day—30 times the rate of replenishment. Ground-water pumping has been carried to such extremes in southern California that now some of the supply is brackish. Near Chicago, the subsoil-water table has been lowered by 500 feet.

The water shortage is not just limited to the West; 1,031 cities and towns all over the Nation reported enforced curtailment of water use during the first 8 months of 1953. New York and Philadelphia are competing for the same water supply.

But the West's problem is unique. Some of the Western States, such as Arizona, are already using all of the dependable water supply within their borders, and the 17 Western States, as a whole, are now using 70 percent of all the water they might be expected to develop at reasonable costs.

Unfortunately the demands will increase as fast as the cost. By 1975, estimated water requirements will have doubled. Direct industrial uses will increase by 170 percent. But the demands of a growing population impose upon the United States another need that involves even more water: Increasing its output of food. In order to do this, one agriculture expert estimates that "all acreage * * * currently idle has to be put back to work by 1960. By 1975, even if marginal lands are used, there might be a deficit of more than 100 million acres."

This means but one thing: We will have to expand and accelerate our Federal reclamation program, by which water is brought to arid land, and the land is brought into farm production.

The reclamation program has been as much a part of the West's agricultural development as the McCormick reaper. In the 50 years since the program began, 69 reclamation projects have brought water to 7.1 million acres of farmland as well as to 56 urban areas. This has raised $10 billion worth of crops, brought $6.8 billion to farmers in income as well as $10 billion in nonfarm income in reclamation areas.

But now, despite these demonstrated benefits, the reclamation program came to a virtual halt in 1953 when the Republicans took office.

Of course, the Eisenhower administration has given verbal support to reclamation. In his 1953 state of the Union message, the President promised that new projects "will be planned for the future." Yet only a few months later he chopped nearly one-fourth from the reclamation funds previously requested by President Truman. The Republican Congress made even deeper cuts.

But the administration did not stop at cutting funds for current reclamation construction. It also cut out nearly 70 percent of the funds requested by President Truman for the planning and design of future projects. In future years, this is likely to leave a gap in the reclamation program that cannot be made up, since a major reclamation dam cannot be planned overnight. It takes years of planning and engineering design.

Moreover, in the past 2 years, the administration has reduced the Reclamation Bureau's staff by almost a third.

But the administration's attitude toward reclamation can best be summed up in one simple fact: In the 2 years it has been in office, it has not begun work on a single new multi-purpose reclamation dam.

In order to rescue its waning reputation in the West, the administration, which opposes Federal projects in most areas, threw its support behind the upper Colorado storage project, a series of Federal storage dams and power projects. Oregon's Senator RICHARD NEUBERGER has spotted the reason: In the Colorado area, power costs are high and industrial customers few. "No utility corporation covets these sites," he says.

In contrast, utility corporations do covet the lucrative power sites in the Pacific Northwest, where there are abundant supplies of cheap water power and opportunities for industrial development. There, however, the administration opposes the kind of Federal development it is pushing in the Colorado Basin, and favors turning over the greatest undeveloped water power site in America to the Idaho Power Co., whose development plan would provide no reclamation

But reclamation itself is not an answer to the water shortage. Somehow, new supplies of usable water must be found.

However, science has offered one encouraging development to what would otherwise be a very discouraging prospect.

Back in 1952, the United States Government began scientific explorations on how to make use of the world's largest untapped source of water—the ocean. In only 4 years of experiment, the Government's saline water conversion program has taken giant strides in the field of removing the salt from and purifying sea water and brakish inland sources for agricultural, industrial, and even human use.

The saline water conversion program was started under former Secretary of the Interior, Oscar Chapman, who asked Congress to appropriate $25 million for research.

At the program's outset, costs of converting water were estimated at $400-$500 an acre-foot. Scientists set themselves a goal of reducing the water cost to $120 for industrial purposes and $40 for irrigation, (which does not require the purity demanded by most industries). This year, David Jenkins, director of the program, announced that this goal was well within reach.

The good that could come from a cheap method of saline water conversion is great indeed. At present the West is understandably engaged in a tug of war over the rights to water from the Colorado River. Low-cost water from the sea might well answer many of California's water problems. Moreover, other seaboard cities such as New York might well benefit from an effective water conversion system.

Just as important as purifying sea water, are the methods being developed to demineralize brackish inland water supplies. One company, working on Government contracts, has set up a tiny experimental project in a truck trailer in Buckeye, Ariz. The experiment has been highly successful and the company believes that on a larger scale costs could be considerably reduced.

According to Democratic Senator LYNDON JOHNSON, proper water development in his State of Texas "would put another million acres of farmland into cultivation * * * increase Texas' synthetic rubber production more than four times and nearly double petroleum refining."

Even in the field of foreign relations, low-cost water supplies could make a constructive contribution. A successful, though expensive, example is the sea water conversion plant installed by Westinghouse at Kuwait on the Persian Gulf.

Before the Kuwait plant was installed, the Kuwait Oil Company had to bring in water by tanker from a source 90 miles away.

Curiously enough, in spite of the administration's stated awareness of the Nation's water shortage, the Interior Department under Secretary McKay has been reluctant to forge ahead in this encouraging field.

Most experts closely connected to the program admit that the time has come to set up

large pilot plants to test the various methods of conversion, which up until now have only been laboratory experiments. Yet, this year Secretary McKay asked for an increase of only $200,000 a year in funds, hardly enough to do more than continue existing experiments. The Budget Bureau, which speaks for the President in these matters, declined even to endorse this small increase.

But in June, largely through the enthusiasm and hard work of Senator CLINTON ANDERSON, Democrat, of New Mexico, and the combined efforts of California's Representatives ROOSEVELT and ENGLE, the House and Senate agreed on a bill which raises funds to be appropriated from the $6 million asked for by the administration to $10 million.

An editorial in the Denver Post suggests where to put the blame for 3 years of inaction:

"Our complaint against the Eisenhower administration's Department of Interior has been its failure to dramatize the dynamics of its program and to speak forthrightly and factually for the great West that the Department was created, primarily, to serve."

AF Academy Praises Florida Education

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 29, 1956

Mr. SIKES. Mr. Speaker, under permission to extend my remarks and to include extraneous material, I would like to insert in the CONGRESSIONAL RECORD the attached article by Mr. Allen Morris entitled "AF Academy Praises Florida Education," which appeared in the Pensacola News Journal on Sunday, March 25, 1956. This is a very fine tribute to the Florida school system and I would like to commend the reading of the article to my colleagues:

TALLAHASSEE.—State School Superintendent Thomas D. Bailey, who has been hearing with some pain "Why Johnny can't read" and other criticisms of the public educational system, got a pleasant surprise in the mail the other morning.

Bailey learned that achievement and aptitude tests at the Nation's new Air Force Academy have shown Florida's public schools at or near the top in the United States, insofar as the end product, the educated child, is concerned.

While there have been through the years various theoretical measurements of the effectiveness of school, the Air Force testing was the first known here which matched Florida boys against those from all the other States.

The Academy's registrar, Maj. William C. Cox, explained in a congratulatory letter to Superintendent Bailey that the Academy requires all candidates for admission as cadets to take comprehensive examinations whose subjects include mathematics, social studies and English.

"One comparison of the States was made by using all candidates in each State and another comparison was made by using only the selected group from each State," wrote Major Cox. "In each case, Florida stood No. 1."

In other words, all the Florida applicants ranked higher, as a group, than did all the candidates for cadetships from any other State. And the 5 Florida boys chosen to be cadets likewise ranked higher, as a group, than did the selected cadets from any other State.

In each of the 5 subjects, the score of the 5 Florida men selected for the first class substantially exceeded the average for the 306-man group. In the mathematics field, for example, the Floridians scored 730 points compared to an average of 622 for cadets from the remainder of the country. In a jet-propelled age, mathematical aptitude and achievement are especially important to those who will build tomorrow's Air Force.

But to many Floridians, the most encouraging aspect of the Air Force examination statistics may be the plain indication that their sons and daughters are being offered the opportunity for a balanced education. The Florida cadet candidates not only finished at the top of the national field in mathematics, but third to other States in three other categories, and fourth in the remaining subject, English.

Registrar Cox added this significant comment in his letter to Superintendent Bailey: "It is also of interest to note that all of the Florida cadets have been on the dean's list each month since classes began in September."

Superintendent Bailey said he thought all Floridians could take pride in the showing made by the Florida Academy applicants, especially since these came from all parts of the State and were not concentrated in any one area that might happen to have better schools at the moment than some others.

"I believe Major Cox's letter proves conclusively that we have a sound educational system right down the line," explained Bailey. "If we didn't have excellent teachers in all subjects, our graduates certainly would not have made the tremendous scores they did in competition with the rest of the country. The Air Force Academy examinations have demonstrated that the opportunity to learn exists in Florida for all who wish to do so.

"But, of course, the taxpayers are due more credit than anybody else—they've financed the improvements we have made and will continue to make in our public school system."

Remember the Good Old Days in Yellowstone in the 1920's?

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 29, 1956

Mr. METCALF. Mr. Speaker, an article published in the Park County News, Livingston, Mont., and written by Prof. A. R. Patton, a former Montana resident, recalls Yellowstone National Park as it was in the 1920's. Believing this article to be of general interest I am inserting it in the RECORD.

Contrast the conditons that existed in Yellowstone Park at that time with the overcrowded conditions today and the need for improvement in park facilities is dramatically demonstrated.

The article follows:

REMEMBER THE GOOD OLD DAYS IN YELLOWSTONE IN THE 1920'S?

(EDITOR'S NOTE.—The following is a most interesting observation on many experiences in Yellowstone Park, covering a period of nearly 35 years, which we know will be of interest to Park County News readers. The writer, A. R. Patton, son of the late A. R. Patton, who with J. F. Alspaugh for many years operated the Progress Clothing Store, and Mrs. Patton, 204 Callender Street. He is now professor of biochemistry at Colorado A & M. College at Fort Collins, Colo.)

(By Prof. A. R. Patton)

This summer there were 8 people representing 3 generations of the Alva Patton family, reunited at Fishing Bridge in Yellowstone Park for the first time in many years. Memories of the old days haunted some of us. We thought of our first camping trip through Yellowstone in 1921—the 4 of us at that time—and how it became an annual affair after that and finally a habit that has lasted for 35 years.

We camped on grass under the trees at Old Faithful in 1921, and you can't do that any more. I remember that at least once our tent was so situated that we could lie in bed in the morning and look out the open tent flap and see Old Faithful geyser erupting. As nearly as I can tell now, our tent was not far from the place where that loudspeaker now blares for 10 minutes before each eruption. I have a little snapshot from that time showing Old Faithful in action. It is dated August 4, 1921, and there are only 3 persons in view as onlookers. You can't take a picture of Old Faithful on August 4 with only 3 people in it any more. The viewers were my mother, Mrs. Alva Patton, who now lives at 204 East Callender Street; my brother, Dr. R. L. Patton, a professor at Cornell University in New York State; and my father, the late Alva Patton. I call my father the "late" not because he passed away in 1949 but because even in those days he was generally known to us as the "late Alva Patton" because he was so often late home from the Progress Clothing Store, where he was in partnership with Mr. Alspaugh. Most of his friends pronounced his name "Alvy."

There were bears around then, too, but they didn't attract so much attention. But if a girl had showed up wearing shorts like they do now, that would have stopped more cars than any present-day bear jam. As I recall the girls wore heavy black stockings, knickers buttoned below the knee, and middy blouses. Even though the bears were fed garbage at the so-called "bear feeding grounds," later presided over by a ranger with a carbine to keep the people from molesting the bears (so they claimed), once in a while some restless bruin would wander into the campground in search of fresher eats. In those days the sedans, which were scarce, had cloth tops, and the bears had learned that a locked sedan could be entered by climbing a tree, elbowing out on a limb, and gently lowering the rump through the lid. Later the owners would return from the Savage show at the lodge to find a big black bear placidly reclining inside the locked chariot, well-smeared with a mixture of sticky eatables and shredded upholstery.

One night I remember some fellow from Utah camped next to us. He had a pickup truck loaded with peaches. That poor guy was up most of the night shouting "hoopla" amidst a sound of crushing peach crates. The next noon he was sound asleep on a picnic table. He'd had a hard night, as indeed had we. This was due to the fact that every time he hollered "hoopla" (why hoopla?) the li'l ole bear shinnied up the nearest stick of wood, and that happened to be the tree one end of our tent was roped to!

"Yes, We Have No Bananas" was popular in those days, and "Barney Google," and it was tunes like that which were sung around the campfires along with such old favorites as "Till We Meet Again" and "Long, Long

Trail." Frequently the latter became "There's a long long nail a grinding into the heel of my shoe, and seems as if it must be in a mile or two." That was before Petrillo, and any professional talent that happened to be in the crowd was brought forth to shine unstintingly. I well remember the day an old Model T puffed into the campground with a pump-organ strapped on the running board. In the seats were some vaudeville people (pre-TV), and for several nights while camping there they put on their song-and-dance acts at the campfire, and led the singing with the folding organ. There is something about the reflection of flickering campfire light against the tall lodgepole pines, and the rustle of the crackling flames, that beats the thump-thump of steam rising in a city apartment and the flicker of the billboard lights across the street. Entertainment was informal in those days, and there was enthusiasm.

Camping was fairly primitive as we began it in 1921. There was the old Buick open touring car with wooden spoke wheels and linoleum trimmed running boards, with tent, cupboard, poles, and various odds and ends tied to it with rope. We left the back seat home and packed blankets in its place. At first we cooked on a wood fire, covered with a discarded number plate from an N. P. switch engine propped on some iron rods brought along for the purpose. There is only one item of menu that I recall, although we must occasionally have eaten something else. This one item was a big skillet of sliced onion and potato, fried until brown. The aroma which permeated the campground from this fragrant concoction caused considerable drooling, even among the dudes who sometimes left their hotel verandas in the evening to stroll through the campground, slumming, or so we thought. I remember one particular well-dressed dandy giving us the eye, and my dad saying "Look at that fellow; I'll bet he wouldn't be caught dead living like this." A few moments later this same dude passed us on the way back, then turned back and stopped to chat. I remember one thing he said was, "My, I certainly envy you folks who can travel in your own car and live outdoors like this, but I don't happen to own a vehicle myself." Well, you could have knocked us over with a fender.

The worst part of camping was the cold nights, for which we were not prepared. We had never heard of sleeping bags in those days, and we not only slept high on folding cots, cold underneath, but we pitched the tent tight with about 2 inches of ventilation around the bottom. That ventilation was ice cold. I remember lying in bed suffering at 4 in the morning and thinking to myself that the guy who composed the song The World Is Waiting for the Sunrise sure must have been on a camping trip when he thought of it. But then by 4:30 the loud thud-thud of woodchopping would commence, evidence that others were cold, too. Now we sleep in dacron bags on air mattresses, and are nice and warm.

At each campground in the early twenties the trees had number tags on them, and every night about suppertime a couple of 90-day wonders would come around with a clip board to take down the license numbers and locations of the campers (sagebrushers). Then, if you left a fire burning, which we never did, and tried to sneak out of the park entrance (there was only one, and that was at Gardiner), the rangers would send you back and make you put out that fire in front of everybody even if they had to stay up all night to be sure there would be a fire to put out when you got back. Mighty good idea. The recording of registration data was done out loud in code, and this was partly for the amusement of the open-mouthed sagebrushers. I remember one year the code for a car from Montana was "crooked Joe Dixon." I guess there must have been a governor of that name at the time, but I was too young to remember.

There was a rather indelicate delicatessen at the Old Faithful campground, and for 15 minutes every afternoon they sold milk. An open truck from Livingston would bring up several cans of unrefrigerated raw milk. At the sound of a loud toot on its Buell horn all the sagebrushers would grab pots and pans and come running in the hopes of getting some milk. This bluish liquid was doled into the pots with a big dipper, and drunk at once or used in cooking before it would spoil. There was never enough to meet the demand; why they did not bring more I never knew. Nowadays you have refrigerated homogenized vitamin D milk in paper cartons (from Idaho Falls, I think).

Those Buell whistles are something I would like to hear in the park again. All the official park vehicles had them. They hooked to a spark plug hole and when opened gave forth a series of melodious hoots which would wake the dead. Instructions were to blast them at all turns in the road, and since there were no straight places these tooters hooted practically continuously. They were the trademark of the park. The old White buses (actually yellow) were really trucks with high wheels, folding tops (always down except in a cloudburst), and without benefit of storage battery. Rotation of the motor was begun by exercise at the crank in front, and the lights were acetylene. Hearing those Buell horns reverberating from the walls of the canyon when the buses came in was a thrill lost to later generations. Oh, for the good old days.

The dudes piled into these buses every morning at Gardiner. They had arrived by train in Livingston earlier that morning, and had been given time to roam in search of breakfast and curios before the trip to Gardiner. Usually they went to the Evans Curio Store, the Sharp Curio Store, Jones Bros., or perhaps the Kline Hotel. That was where the Murray Hotel is now. A park train ran from Livingston to Gardiner every morning, and back at night, getting into its siding on Park Street about 9 p. m. It boasted what I as a small boy looking out of the window of our house on Fifth Street called the "open people car," a sort of flat car with a fringe on top, where the dudes could ride in the open air and sniff the pungent Artemisia tridentata and get thoroughly peppered with engine cinders. That is how most people got to the park, and so most of them never saw that gosh awful goat ledge of a road we drove over just before reaching Gardiner, just as Yankee Jim had left it. It was a sort of purgatory which must be passed through to reach Yellowstone, a barrier which made the park seem something special and out of this world. Later I got a similar feeling when arriving in Manhattan through the Holland Tunnel, like coming up into a sink through the drainpipe. That little chunk of cowpath hanging high above the river was strictly a place where only the driver kept his eyes open.

Cars in fact had only been allowed in Yellowstone for 7 years, since 1915. Before that time it had been held that the roar of an internal-combustion engine would scare the pants off most of the livestock up there. And airplanes were prohibited from flying over the Park for much longer than that, although I well remember that in the fall of 1927 Lindberg flew his *Spirit of St. Louis* low over his old haunts in Yellowstone, and nobody did anything about that, because it seems that only recently he had flown the Atlantic all alone and was quite a hero and still is. I was disappointed because he was supposed to fly over Livingston and I ran my model T up Harbat's Hill and waited but he turned south over Yellowstone instead.

At Old Faithful in those days there was the original Hamilton store with a couple of totem poles out front, the old part of Old Faithful Inn, and the Wiley camps, which consisted of an assortment of canvas tents on wood frames. The campground, which as I mentioned was so new there was still grass on the ground, was watched over by a kindly Irish spirit named McCarty, as I recall. Each night he would drop around to our campfire, and invariably wind up by saying, "Well, it looks like it's going to be clear and cold tonight." My brother used to call him the old bunny gentleman.

I have visited a lot of other national parks in later years, but I have never heard a better ranger lecture than the one given at Old Faithful by a ranger on a horse, and hence called the sermon on the mount. That fellow was not only a showman, he knew his stuff. All about how bears can sit in a teacup when they are first born, and things like that. I don't remember his name, but a lot of oldtimers in Livingston will. Folks in Yellowstone used to stay over at Old Faithful just to hear that lecture.

Nowadays you can hardly walk around Old Faithful area any more; it is all posted with signs telling how dangerous it is. Guess the park must be crumbling in its old age, because I walked all over those dangerous crusty places in the old days, 35 years ago, because I didn't know any better and there were no signs. After Old Faithful finished playing, it was the custom for everyone to rush up and look down the hole as soon as possible. I remember a movie company asked permission to tie the heroine over the hole, to be rescued just in time before the geyser played. That request was refused, however; not, it was explained, because of any danger, but because the park authorities did not look with favor at the idea of allowing Old Faithful geyser to partake of villainy. I remember one 90-day wonder who delighted in thrilling his dudes by walking backward up to each hot spring on his tour, stopping just short of suicide, and then speaking his piece while standing on a ledge half an inch thick extending out over the hot water.

One good thing, they have got away from most of the satanic references now. It used to be that every other thing in the park was hell's this or the devil's that. Finally, they have become merely thermal action, as my son learnedly states. However, there is that new one, the black paintpot which opened up above the dragon's mouth in 1948. I have never seen so much mudslinging as that in my born days, and I thought this summer they should call that one campaign cauldron, or something political like that.

These memories flitted past at the family reunion in the summer of 1955. R. L. Patton and his family, A. R. Patton and his family, and our mother, Nannie. Little is left of the happy old days. Only a few relics remain. One of these is the motor launch at the lake boat dock which I rode in 1921. It is still there, and in daily use, but with a new motor last year, I was told. I photographed President Coolidge at that dock, going on a fishing trip in a blue serge suit. Some other things have not changed. There are still savages, male and female, and including amongst others sheetslingers, pearldivers, gearjammers, pack rats. Rottenlogging still survives. And there are still the supercilious 90-day wonders. The spirit of Yellowstone never dies. Much of Yellowstone is still unspoiled. One of the first explorers, seeing Yellowstone Lake—1859, I think—wrote that he was glad to see it before it was spoiled because soon its shores would be teeming with pleasure seekers. Well, nearly 100 years have passed and I can say its shores are not yet teeming with pleasure seekers. In fact, I have found in my boat that it takes only a few minutes to leave the crowds behind and be back in the Yellowstone wilderness which I knew and loved as a boy.

The Disunited Democrats

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 29, 1956

Mr. SIKES. Mr. Speaker, under permission to extend my remarks and to include extraneous material, I wish to have inserted in the CONGRESSIONAL RECORD a reprint of an outstanding news column by Mr. Walter Lippmann which appeared in the March 29 issue of the Washington Post and Times Herald entitled "The Disunited Democrats":

TODAY AND TOMORROW
(By Walter Lippmann)
THE DISUNITED DEMOCRATS

The Democratic Party, it is now evident, is in another of those periods of inner conflict which it passes through about once in each political generation. The party was sharply divided in the days of William Jennings Bryan. Then Woodrow Wilson united it. After Wilson, it became bitterly divided over prohibition and the Ku Klux Klan until Roosevelt, in the days of the great depression, united it in the New Deal. Since the death of Roosevelt at the end of the war the tension between northern and southern Democrats has been increasing. Governor Stevenson, who is a national leader in the line of Wilson and Roosevelt, has been trying, but not successfully, to reunite the party.

There is a real and important issue between Stevenson on the one hand, Truman, Kefauver, and Harriman on the other. It is not about whether Stevenson is too moderate in his criticism of Eisenhower, or whether he can give the Republicans bigger hell than KEFAUVER or Harriman. There is at issue the deep question of party policy and party strategy: is there to be a united Democratic front or are the Democrats to run, as under Truman in 1948, as a northern party?

Shall they aim to win the Presidency by preserving the united front with the southern Democrats who are in control of Congress? If so, Stevenson is their man, indeed their only possible man. Or, shall they let the erring southern brothers go Republican or Dixiecrat while they fight the election as a militant northern party appealing to the Farm Belt and to the big cities? If so, they can make their choice of KEFAUVER, Harriman, and perhaps some others in an open convention in which former President Truman, the hero of 1948, will be dominant.

The New Hampshire and Minnesota primaries indicated that among northern Democrats the balance has turned rather emphatically against the policy of a united front under Governor Stevenson. Why is this? It is because there is not now any national issue which overrides, as in Wilson's time and in Roosevelt's, sectional and local interests. A united front policy means giving the local interests something less than they want. It can work only when there is something so big, such as a war or a depression, that local interests are not all-important.

Truman, Kefauver, and Harriman are in a position to say, "We told you so last autumn when Governor Stevenson announced his candidacy; we told you then that the Democrats must run as a militant party, ignoring the South, and seeking the Negro vote, the labor vote, and the farm vote in the Northern States." They did not put it quite so frankly. But what they were asking for was that the party should follow the Truman pattern of 1948.

Although they have by no means proved that the Truman pattern could win again in 1956, what has happened since Governor Stevenson announced on November 15 has done much to justify their view that this is not a favorable year for a united Democratic front.

It is, however, only fair to remember that November 15 was 7 weeks after the President was stricken, and that there was no good reason then to think that he could or would conduct a genuine campaign for reelection. Last November there were the best reasons for supposing that the Democratic candidate would be pitted against NIXON, either as a candidate for President or as candidate for Vice President along with a frail Eisenhower. Against NIXON, the Democrats had every prospect of winning with Stevenson and the policy of a united front. For Stevenson, more than any other man in either party, possesses the unifying spirit which is the secret of Eisenhower's appeal to the people. The Gallup poll was insistent upon Stevenson's ability to beat NIXON.

It is the President's remarkable recovery which has transformed the situation.

Stevenson and the united front have had no effective support either among the northern or the southern Democratic politicians. The first allegiance of politicians is to the constituency in which they have to be elected, and for that reason a united front policy can never be the first choice of politicians. The southern Democrats, who are in control of Congress, have in this session done nothing to make it easier, much to make it harder, for Stevenson to carry on the policy of the united front.

* * * * *

The situation could change in the months to come. But on the prospect of an Eisenhower-Nixon Republican ticket, one may have doubts whether any of the leading Democratic politicians in the North or in the South are really interested in the Presidency. In part, that may be because they feel that the Democrats have only an outside chance to win the Presidency. But it may be also because they have done well enough, very well indeed, with Eisenhower in the White House and themselves in control of Congress and of so many of the State capitols. They may, in other words, regard the present division of powers between the two parties as not at all unsatisfactory.

H. R. 722

EXTENSION OF REMARKS
OF
HON. LEROY JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 29, 1956

Mr. JOHNSON of California. Mr. Speaker, today I address myself to the proposal which is contained in the bill, H. R. 772, which provides for a modification of the Walter-McCarran Act.

When that bill was before the House, I voted for it. The proposal which I make in my bill would not materially change that bill, but in my opinion, would distinctly eliminate certain inequities to a groupp of our people. As all of you know, the Walter-McCarran bill followed the same basic principle which had been contained in the Johnson Act of 1925, of which Hiram W. Johnson, our Senator, was one of the coauthors, and Mr. Albert Johnson, of Hoquiam, Wash., was the other coauthor. The principle in the Johnson Act gave preference to the so-called Nordic races, of which I am one and of which I am proud. Also, the classification as to the right of migration into the United States was dated back to 1890 and applied to the population racial pattern at that time. This same principle was carried out in the McCarran Act, which dated back to 1920, in other words, about 30 years back of the time when the bill became effective.

Undoubtedly in the consideration of the bill, it was determined by the evidence before the committee that wrote the bill just how many immigrants we could absorb and be assured that they would readily melt into the population and become good American citizens.

The odd result in both these cases was that, despite the fact that the Nordic races were given preference, they did not take full advantage of the preference given them. This, I understand, was more true when the Walter-McCarran bill was passed than it was at the time the Johnson bill went into effect. However, it is a well-known fact that the Scandinavian countries—Norway, Sweden, and Denmark—scarcely use any of the quota to which they are entitled. This is likewise true of the British Empire. It is also true of the Netherlands, Belgium, France, and to some extent of Germany.

In other words, there are vacancies which could be used by countries that have serious population problems.

I am frank to say that I am speaking of only one country. The one that I am thinking about is Italy. This is due in large part because we have a great many Italians in my congressional district. Many of them, especially the leaders among them, feel that it is unfair to class them as an undesirable group of people who are given a very small quota with no flexibility and a quota that virtually prohibits any migration of their fellow countrymen.

Among the Italian group in my district, I need mention only a few as typical of the kind of people and the part which the Italians contribute in our community life.

Many years ago a lowly fruit peddler migrated from Italy to the United States. He finally landed in San Francisco, and became a peddler of fruit. He made a meager living and later became a businessman who sold fruit wholesale. After he became prosperous, it began to irritate him when he learned of the high rates of interest which the banks at that time charged those who needed to borrow money to invest in their business. This situation grieved him and he decided to find a way to make the borrowing of money a little easier for the borrower who needs credit for his business. In other words, he wished to develop a credit system that he considered equitable. The result was that he and some others acquired a bank, which they called the Bank of Italy, and whose policy it was to make business loans easier for the businessman.

That bank prospered and began to buy up branch banks in various parts of California. It later changed its name to Bank of America, and as perhaps all of you know, today there are 555

branches in California of the parent Bank of America.

There is no doubt in my mind that, if Mr. Giannini had had merely the ambition to become a wealthy man, he could have died worth from ten to fifty million dollars. The instincts of the man became absolutely apparent when his will was probated. It showed that he had a personal wealth of $445,000. It also provided stupendous gifts for agricultural research to the University of California, and to other public, worthy institutions. In other words, the man was not the grasping type that it was anticipated he would be by some people, due to the large bank over which he was the dominant figure.

His son, who later became the president of the bank, and his family carried on the benefactions and policies which Mr. A. P. Giannini started. Is it not natural that those people should feel that they are discriminated against because unfortunately some persons of Italian birth have become criminals. They are as ashamed of that as we are. And it is unfortunate that frequently idle gossip is indulged in that the great mass of Italians in some manner condone the criminal conduct of some of those that have been convicted, and some that have not been convicted but who have been born in Italy and migrated to America.

I need but mention another man, who had much the same kind of a career as Mr. Giannini. He also started as a peddler of fruit and soon became one of the largest agriculturists and most humane agriculturist in the State of California. I refer to Mr. Di Giorgio. This man farmed vast areas of fertile land in the San Joaquin Valley. He raised many different kinds of fruit and nut crops. He had a big office in New York where his goods were distributed to the trade in that large metropolitan area. In the State of California, we have a great many migratory laborers. The reason is that they harvest one crop and then they must go to another place where a different crop comes in. Many of them start in the lower part of California, and work their way through the various stages of the crops clear up to the States of Oregon, Washington, and Idaho.

The squalid way in which these workers lived attracted the attention and the sympathy of Mr. Di Giorgio. He realized that they were human just like he was, and that they had families and should have a chance to raise their families in a home environment like all Americans expect.

Consequently, he was one of the pioneers in trying to provide labor for these migrants all through the year. In the wintertime he would have the ranch land plowed; his employees would fix the fences; they would do all kinds of work in the offseason which would keep them busy and also improve the ranch for the owner. Recognizing that the happiness of a family revolves around the home, Mr. Di Giorgio stated to build houses for his workers. He sold them for less than they cost, and permitted the persons who bought them to buy on the installment plan. The result was that he had satisfied and contented workers. A group of labor union people at one time boycotted the place, claiming that what he was doing was unfair to labor. Remember there was no strike among the laborers, they were thoroughly satisfied. Apparently the union decided that the laborers must be organized. They were unwilling to become organized as they felt they did not require to be organized to obtain good treatment from Mr. Di Giorgio. The result was that the Labor Committee of the House of Representatives some years ago sent out a group to look into the matter, and they found that every single laborer on the ranch of Mr. Di Giorgio was thoroughly satisfied with the treatment that he was being given, including the wages and the living conditions. The result was that there was no more agitation concerning the workmen on the Di Giorgio ranch.

This man also, upon his death, gave a great deal to charitable institutions. He was a wonderful example for men who are financially successful to leave posterity something as an indication of their gratitude for the opportunity which has been theirs to accumulate funds and to become an important person in the community or in the State and Nation.

I wish to mention one other individual who happens to be a close, personal friend of mine who would not give me permission to do this if I asked him. However, I feel that he is typical of the people of the Italian race that live in our area. His name is Philip Cavalero. He is a lawyer of tremendous ability. His father was a farmer. He went through the schools of San Joaquin County and then he determined to go to Stanford University. This was by his own efforts and by helping his father, who was kind enough to pay him for his work. At Stanford he became one of the best debaters in the university. He won the Carnot medal as the best debater in the college. After completing his academic course, and his law course, he was admitted to the bar of California, and shortly thereafter he became a member of the firm with whom he still works. The name of the firm is Rutherford, Jacobs, Cavalero, and Dietrich. Mr. Cavalero is one of the best water lawyers in the State of California. He is a thoroughly ethical, capable, successful member of the bar of California.

These are three typical examples of what the Italians are in our area. Also, among them we have some of the finest vegetable crops to be found anywhere. The Italian gardeners of San Joaquin County, and the Italian gardeners of Lodi, Calif., have an organization and once a year they have a great picnic. The output of agriculture crops by these groups staggers the imagination, and it is one of the things that has helped make San Joaquin County, the fifth county in the point of dollar value of their crops in the entire Nation. Frequently I get things from them, such as asparagus, peaches, cherries, and so forth that I distribute to the Members of the House.

This all leads me to say why is it not possible to give the home country of these remarkable persons a little better opportunity to send people to America to occupy the spaces which are not taken by other nationalities. We must look further still to understand really how disappointed the American-Italian feels by virtue of some of the provisions of this law.

I frequently listen to the TV, and I am especially interested in hearing tuneful songs sung by people that know how to do it. One of my favorites is Perry Como. He is a remarkable individual. Just looking at him one could tell that he was modest and kind, as well as extremely capable in his chosen field of endeavor. He is merely symbolic of many others in all fields of endeavor in our life, many of whom were immigrants.

In the long span of history, I doubt if there is any country in the world that has contributed as much as Italy. They contributed Christianity, law, invention, science, architecture. A study of their past shows that in practically every century they have played a dominant part since long before the Christian era in making contributions to mankind. Therefore, I am hoping that the bill, which I have and which a number of other colleagues have, will be given serious consideration to the end that the unfortunate situation in which Italy finds itself, due largely to a mad dictator who domineered and almost ruined the entire nation, makes their population situation that much more difficult. Mussolini could have had a place in history as one of the great men of this era. He had an empire in Africa, which I have visited where he could put his excess population, but he threw it all away in his frenzied demand for political power and domination.

We must consider many of the cultural things that Italians have contributed to the world. Italian artists have contributed their experience and creative talents to the construction and decoration of buildings for monarchs and religious communities since Carlovingian times. Later, the famous masters of Como and campione participated in creating cathedrals in Spain, France, Germany, and Hungary; and the Roman Piero Oderisi of the Cosmati school, built the two earliest tombs destined for English Kings—Edward I and Henry III—in Westminster Abbey, in the 14th century. During this century, Italian artists participated in building the Papal Palace of Avignon, and frescoed it; among these artists, the great Sienese Simone Martini was outstanding. Others were in France and Bohemia at this time, and a follower of Giovanni Pisano built the Mausoleum of Saint Eulalia in the cathedral of Barcelona. Later, Italian artists succeeded in replacing the Gothic style throughout Europe with Renaissance classics. Much more could be said about the influence of these artists. Another group of artists and architects decorated the Chateau of Fontainebleau magnificently, and made of it a model of style, and a school for future French art.

In the 17th century, the celebrated Taj Mahal of Agra, one of the marvels of Indian architecture was built by the Venetian Girolamo Veronese with craftsmen he brought with him.

Italian explorers like Marco Polo unlocked unknown parts of the world.

Marconi discovered wireless telegraphy. An early Italian scientist, Leonardo da Vinci—1452–1519—who was also a sculptor and artist and painter predicted that some day motive power would propel machines in the air to vie with the birds. In the First World War the Italians built Capronis and other models of planes that were used in the prosecution of the war. The author of this statement served in France with Fiorelli LaGuardia at a French field where we both were learning to fly Neuports and other French planes. Fiorelli was sent to Italy because of his knowledge of the Italian language and I learned that he flew some Capronis in combat on the Italian front.

Italian painters decorated the Capitol Building where we hold our sessions of the House of Representatives and the United States Senate holds their sessions.

We certainly must recognize that Italy, the nation, has made tremendous contributions during the long period of its existence.

We should not discard or ignore these tremendous contributions in every field of endeavor because perchance a few bad men of Italian birth have become criminals or gone sour and disgraced their native land by their un-Christian-like conduct.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided,* That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D. D.

STANDING COMMITTEES OF THE SENATE

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Eastland, Clements, Humphrey, Scott, Symington, Aiken, Young, Thye, Hickenlooper, Mundt, Williams, and Schoeppel.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, McClellan, Robertson, Magnuson, Holland, Stennis, Clements, Johnson of Texas, Bridges, Saltonstall, Young, Knowland, Thye, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Dworshak, Dirksen, and Potter.

Committee on Armed Services

Messrs. Russell (chairman), Byrd, Johnson of Texas, Kefauver, Stennis, Symington, Jackson, Ervin, Saltonstall, Bridges, Flanders, Mrs. Smith of Maine, Messrs. Case of South Dakota, Duff, and Welker.

Committee on Banking and Currency

Messrs. Fulbright (chairman), Robertson, Sparkman, Frear, Douglas, Lehman, Monroney, Morse, Capehart, Bricker, Ives, Bennett, Bush, Beall, and Payne.

Committee on the District of Columbia

Messrs. Neely (chairman), Bible, McNamara, Morse, Frear, Beall, Hruska, Case of New Jersey, and Allott.

Committee on Finance

Messrs. Byrd (chairman), George, Kerr, Frear, Long, Smathers, Barkley, Anderson, Millikin, Martin of Pennsylvania, Williams, Flanders, Malone, Carlson, and Bennett.

Committee on Foreign Relations

Messrs. George (chairman), Green, Fulbright, Sparkman, Humphrey, Mansfield, Barkley, Morse, Wiley, Smith of New Jersey, Hickenlooper, Langer, Knowland, Aiken, and Capehart.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Kennedy, Symington, Ervin, Humphrey, Thurmond, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Cotton, Bender, and Martin of Iowa.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Long, Jackson, O'Mahoney, Scott, Bible, Neuberger, Millikin, Malone, Watkins, Dworshak, Kuchel, Barrett, and Goldwater.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Daniel, Ervin, Bible, Thurmond, Bricker, Schoeppel, Butler, Potter, Duff, Purtell, and Payne.

Committee on the Judiciary

Messrs. Eastland (chairman), Kefauver, Johnston of South Carolina, Hennings, McClellan, Daniel, O'Mahoney, Neely, Wiley, Langer, Jenner, Watkins, Dirksen, Welker, and Butler.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Neely, Douglas, Lehman, Kennedy, McNamara, Smith of New Jersey, Ives, Purtell, Goldwater, Bender, and Allott.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Pastore, Monroney, Hennings, Scott, Neuberger, Laird, Carlson, Jenner, Langer, Curtis, Martin of Iowa, and Case of New Jersey.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, Gore, Thurmond, McNamara, Neuberger, ———, Martin of Pennsylvania, Case of South Dakota, Bush, Kuchel, Cotton, and Hruska.

Committee on Rules and Administration

Messrs. Green (chairman), Hayden, Hennings, Gore, Mansfield, Jenner, Barrett, McCarthy, and Curtis.

UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel Sheraton-Park, Washington, D. C.
Mr. Justice Black, of Alabama, 619 S. Lee St., Alexandria, Va.
Mr. Justice Reed, of Kentucky, the Mayflower.
Mr. Justice Frankfurter, of Massachusetts, 3018 Dumbarton Ave.
Mr. Justice Douglas, of Washington, 3701 Connecticut Ave.
Mr. Justice Burton, of Ohio, the Dodge.
Mr. Justice Clark, of Texas, 2101 Connecticut Ave.
Mr. Justice Minton, of Indiana, the Methodist Building.
Mr. Justice Harlan, of New York, 1677 31st St.

OFFICERS OF THE SUPREME COURT

Clerk—Harold B. Willey, 3214 N. Wakefield St., Arlington, Va.
Deputy Clerk—Reginald C. Dilli, 1329 Hemlock St.
Deputy Clerk—Hugh W. Barr, 4701 Connecticut Ave.
Marshal—T. Perry Lippitt, 6004 Corbin Road.
Reporter—Walter Wyatt, 1702 Kalmia Rd.
Librarian—Helen Newman, 126 3d St. SE.

UNITED STATES JUDICIAL CIRCUITS

JUSTICES ASSIGNED
TERRITORY EMBRACED

District of Columbia: Mr. Chief Justice Warren. District of Columbia.

First judicial circuit: Mr. Justice Frankfurter. Maine, New Hampshire, Massachusetts, Rhode Island, Puerto Rico.

Second judicial circuit: Mr. Justice Harlan. Vermont, Connecticut, New York.

Third judicial circuit: Mr. Justice Burton, Pennsylvania, New Jersey, Delaware, Virgin Islands.

Fourth judicial circuit: Mr. Chief Justice Warren. Maryland, Virginia, West Virginia, North Carolina, South Carolina.

Fifth judicial circuit: Mr. Justice Black. Georgia, Florida, Alabama, Mississippi, Louisiana, Texas, Canal Zone.

Sixth judicial circuit: Mr. Justice Reed. Ohio, Michigan, Kentucky, Tennessee.

Seventh judicial circuit: Mr. Justice Minton. Indiana, Illinois, Wisconsin.

Eighth judicial circuit: Mr. Justice Clark. Minnesota, North Dakota, South Dakota, Iowa, Nebraska, Missouri, Arkansas.

Ninth judicial circuit: Mr. Justice Douglas. Washington, Oregon, Montana, Idaho, California, Nevada, Arizona, Alaska, Hawaii.

Tenth judicial circuit: Mr. Justice Clark. Colorado, Wyoming, Utah, Kansas, Oklahoma, New Mexico.

STANDING COMMITTEES OF THE HOUSE

Committee on Agriculture

Messrs. Cooley (chairman), Poage, Grant, Gathings, McMillan, Abernethy, Albert, Abbitt, Polk, Thompson of Texas, Jones of Missouri, Watts, Hagen, Johnson of Wisconsin, Anfuso, Bass of Tennessee, Mrs. Knutson, Messrs. Jennings, Matthews, Hope, August H. Andresen, Hill, Hoeven, Simpson of Illinois, Dague, Harvey, Lovre, Belcher, McIntire, Williams of New York, King of Pennsylvania, Harrison of Nebraska, Laird, Dixon, Mrs. Farrington, Messrs. Bartlett, and Fernós-Isern.

Messrs. Cannon (chairman), Mahon, Sheppard, Thomas, Kirwan, Norrell, Whitten, Andrews, Rooney, Gary, Fogarty, Sikes, Fernandez, Preston, Passman, Rabaut, Yates, Marshall, Riley, Sieminski, Evins, Lanham, Deane, Shelley, Boland, Magnuson, Natcher, Flood, Denton, Murray of Illinois, Taber, Wigglesworth, Jensen, H. Carl Andersen, Horan, Canfield, Fenton, Phillips, Scrivner, Coudert, Clevenger, Wilson of Indiana, Davis of Wisconsin, James, Ford, Miller of Maryland, Vursell, Hand, Ostertag, and Bow.

Committee on Armed Services

Messrs. Vinson (chairman), Brooks of Louisiana, Kilday, Durham, Rivers, Philbin, Hébert, Winstead, Price, Fisher, Hardy, Green of Pennsylvania, Doyle, Wickersham, Miller of California, Pennett of Florida, Holtzman, Mollohan, Lankford, Huddleston, Short, Arends, Cole, Johnson of California, Gavin, Norblad, Van Zandt, Patterson, Cunningham, Bates, Hess, Nelson, Devereux, O'Konski, Bray, Wilson of California, Osmers, Mrs. Farrington, Messrs. Bartlett, and Fernós-Isern.

Committee on Banking and Currency

Messrs. Spence (chairman), Brown of Georgia, Patman, Rains, Multer, Addonizio, Barrett, O'Hara of Illinois, Mrs. Sullivan, Messrs. Fountain, Reuss, Mrs. Griffiths, Messrs. Ashley, Vanik, Bell, ———, ———, Wolcott, Gamble, Talle, Kilburn, McDonough, Widnall, Betts, Mumma, McVey, Hiestand, Nicholson, Oliver P. Bolton, and Bass of New Hampshire.

Committee on the District of Columbia

Messrs. McMillan (chairman), Harris, Abernethy, Smith of Virginia, Klein, Teague of Texas, Davis of Georgia, Morrison, Dawson of Illinois, Williams of Mississippi, Steed, Wier, Jones of North Carolina, Rutherford, Simpson of Illinois, O'Hara of Minnesota, Talle, Miller of Nebraska, Auchincloss, Allen of California, Kearns, Patterson, Gubser, Broyhill, and Hyde.

Committee on Education and Labor

Messrs. Barden (chairman), Kelley of Pennsylvania, Powell, Bailey, Perkins, Wier, Elliott, Landrum, Metcalf, Bowler, Chudoff, Mrs. Green of Oregon, Messrs. Roosevelt, Zelenko, McDowell, Thompson of New Jersey, Udall, McConnell, Gwinn, Smith of Kansas, Kearns, Velde, Hoffman of Michigan, Bosch, Holt, Rhodes of Arizona, Wainwright, Frelinghuysen, Coon, and Fjare.

Committee on Foreign Affairs

Messrs. Richards (chairman), Gordon, Morgan, Carnahan, Chatham, Zablocki, Burleson, Hays of Arkansas, Mrs. Kelly of New York, Messrs. Dodd, Hays of Ohio, Donovan, Jarman, Byrd, Selden, Pilcher, Williams of New Jersey, Chiperfield, Vorys, Mrs. Frances P. Bolton, Messrs. Smith of Wisconsin, Merrow, Judd, Fulton, Jackson, LeCompte, Radwan, Morano, Mrs. Church, Messrs. Adair, Prouty, and Bentley.

Committee on Government Operations

Messrs. Dawson of Illinois (chairman), Holifield, McCormack, Chudoff, Brooks of Texas, Holtzman, Mollohan, Fountain, Hardy, Blatnik, Jones of Alabama, Garmatz, Moss, Kilgore, Fascell, Mrs. Griffiths, Messrs. Reuss, Hoffman of Michigan, Riehlman, Mrs. Harden, Messrs. Brownson, Meader, Brown of Ohio, Lipscomb, Reece of Tennessee, Younger, Knox, Krueger, Jonas, and Minshall.

Committee on House Administration

Messrs. Burleson (chairman), Byrd, Friedel, Ashmore, Hays of Ohio, Jones of Missouri, Rhodes of Pennsylvania, Lesinski, Smith of Mississippi, Dowdy, Long, Alexander, Thompson of New Jersey, Abbitt, LeCompte, Morano, Schenck, Carrigg, Harrison of Nebraska, Corbett, Bennett of Michigan, Hillings, Oliver P. Bolton, Lipscomb, and Halleck.

Committee on Interior and Insular Affairs

Messrs. Engle (chairman), Aspinall, O'Brien of New York, Rogers of Texas, Mrs. Pfost, Messrs. Haley, Shuford, Powell, Edmondson, Metcalf, Christopher, Sisk, Udall, Diggs, Rutherford, Mrs. Green of Oregon, Messrs. Miller of Nebraska, Saylor, Wharton, Berry, Dawson of Utah, Westland, Pillion, Young, Hosmer, Rhodes of Arizona, Budge, Chenoweth, Utt, Mrs. Farrington, Messrs. Bartlett and Fernós-Isern.

Committee on Interstate and Foreign Commerce

Messrs. Priest (chairman), Harris, Klein, Granahan, Carlyle, Williams of Mississippi, Mack of Illinois, Roberts, Moulder, Staggers, Dollinger, Rogers of Texas, Dies, Friedel, Flynt, Macdonald, Hayworth, Wolverton, Hinshaw, O'Hara of Minnesota, Hale, Dolliver, Heselton, Bennett of Michigan, Hoffman of Illinois, Beamer, Springer, Bush, Schenck, Carrigg, and Derounian.

Committee on the Judiciary

Messrs. Celler (chairman), Walter, Lane, Feighan, Chelf, Willis, Frazier, Rodino, Jones of North Carolina, Forrester, Rogers of Colorado, Donohue, Brooks of Texas, Tuck, Ashmore, Quigley, Boyle, Davidson, Reed of Illinois, Keating, McCulloch, Miss Thompson of Michigan, Messrs. Hillings, Crumpacker, Miller of New York, Taylor, Burdick, Curtis of Massachusetts, Robsion of Kentucky, Hyde, Poff, and Scott.

Committee on Merchant Marine and Fisheries

Messrs. Bonner (chairman), Boykin, Garmatz, Robeson of Virginia, Mrs. Sullivan, Messrs. Thompson of Louisiana, Miller of California, Kluczynski, Byrne of Pennsylvania, Bell, Tumulty, Davidson, Zelenko, Clark, Ashley, Dingell, Tollefson, Allen of California, Seely-Brown, Sheehan, Van Pelt, Ray, Mailliard, Dorn of New York, Pelly, Cederberg, Baumhart, Chase, ———, Bartlett.

Committee on Post Office and Civil Service

Messrs. Murray of Tennessee (chairman), Morrison, Davis of Georgia, Rhodes of Pennsylvania, Lesinski, Dowdy, Alexander, Moss, Robeson of Virginia, Mrs. Pfost, Messrs. Fascell, Tumulty, Kilgore, Holifield, Rees of Kansas, Corbett, Mrs. St. George, Mr. Gross, Mrs. Harden, Messrs. Cretella, Gubser, Broyhill, Cederberg, Henderson, and Johansen.

Committee on Public Works

Messrs. Buckley (chairman), Fallon, Davis of Tennessee, Blatnik, Jones of Alabama, Dempsey, Smith of Mississippi, Kluczynski, Steed, Thompson of Louisiana, Gentry, Burnside, Mrs. Blitch, Messrs. Wright, Huil, Gray, Clark, Rogers of Florida, Dingell, Dondero, McGregor, Auchincloss, Mack of Washington, Scudder, George, Becker, Scherer, Withrow, Cramer, Baldwin, Schwengel, Alger, Bush, and Nicholson.

Committee on Rules

Messrs. Smith of Virginia (chairman), Colmer, Madden, Delaney, Trimble, Thornberry, Bolling, O'Neill, Allen of Illinois, Brown of Ohio, Ellsworth, and Latham.

Committee on Un-American Activities

Messrs. Walter (chairman), Moulder, Doyle, Frazier, Willis, Velde, Kearney, Jackson, and Scherer.

Appendix

The 1956 Olympic Games

EXTENSION OF REMARKS
OF
HON. JOHN MARSHALL BUTLER
OF MARYLAND
IN THE SENATE OF THE UNITED STATES

Monday, April 9, 1956

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech dealing with certain aspects of the 1956 Olympic games which I delivered on the evening of April 3, 1956, before the Father Rosensteel Council of the Knights of Columbus in Silver Spring, Md.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE 1956 OLYMPIC GAMES

Last June, in Baltimore, I delivered an address on a subject in which I am keenly interested. I discussed certain aspects of a situation which has aroused in me a great deal of indignation.

It is a subject which should make all Americans indignant, regardless of their individual interests.

I spoke at that time on the subject of sports—amateur athletics as they relate to the activities of hundreds of America's goodwill ambassadors who participate in the Olympic games every 4 years.

I say "good-will ambassadors" because that is exactly what they are.

These clean, wholesome, young Americans have traveled to the far corners of the globe every 4 years as outstanding examples of our way of life. They have always been dedicated to the true spirit of amateur competitive sportsmanship. They are living testimonials of the excellence and superiority of the free American system.

More often than not, these exemplary young people have proven themselves to be athletically superior. But, win or lose, they have consistently excelled in sportsmanship. And, regardless of the outcome of their endeavors, America's young men and women have never been found wanting in their valuable roles as representatives of that type of decency, morality, fair play, and courage which underlies the greatness of this Nation.

It can truly be said that America's young athletes—like her soldiers—have never let this Nation down.

There is, however—and it is extremely sad to relate—a growing body of evidence indicating that we, the American people, will, by sheer default, let them down this year at Melbourne, Australia.

This is a serious charge for me to make.

I do not make it in a moment of passion or with tongue in cheek.

Rather, I make it in the cold, clear light of unimpeachable evidence and only after much serious study and consideration.

I am acutely conscious of its far-reaching implications, but it is stated without reservation.

I pointed out a year ago at Baltimore—and have many times since then—that since the revival of the Olympic games in Athens, Greece, in 1896, Olympic committees of every nation have recognized the fact that the true spirit of sportsmanship rules out even the slightest taint of professionalism or commercialism. So insistent are they in this respect that this concept is embodied in their rules and regulations.

I also explained that the spirit of the Olympics as we have known them is the spirit of amateur sportsmanship itself; the spirit that encourages observance of moral laws; the spirit that engenders a wholesome respect for ethical standards; the spirit that is the nourishment of man's growth. It is the ultimate expression of that inborn sense of honesty, integrity, and fair play that can be found and cultivated in the heart of every man regardless of race, creed, political conviction, or social standing.

I further explained that under our free system in the United States this spirit has found fertile soil in which to blossom to fruition. Our young folks, voluntarily, and on their own time, and without monetary compensation, develop their individual athletic skills and freely compete in the spirit of the Olympics.

I charged at Baltimore—and do here again today—that the Soviet Union flagrantly and wantonly perverts that spirit and ignores Olympic rules in international competition.

I warned that the international Communist conspiracy—as an integral part of its world-wide cultural propaganda offensive—has an iron fist ominously pointed at Melbourne, Australia. I declared with all the conviction at my command that this atheistic gang of cutthroats would do everything and anything, honorable and dishonorable, to capture all the honors at that great international amateur athletic event.

I cited chapter and verse to substantiate these dire charges.

Now, I realize that, because of my own athletic activities as a youth and because of my special interest in sports, many of you may think I am making too much of this matter—seeing ghosts under the bed, as it were.

I assure you, had I never held a baseball in my hand, had I never bounced a basketball off a backboard, had I never felt the precarious balance of a javelin or the compelling weight of a discus, or had I never put a pair of track shoes on my feet, I would be as concerned and as indignant as I am at this moment.

I would be as concerned and as indignant—yes. Fighting mad, if you will—because there will be more at stake for this Nation at Melbourne, Australia, than the outcome of a few athletic events.

The 1956 Olympic games will not primarily test the physical prowess and stamina of our voluntary American athletes. Rather, they will show whether or not America can still hold its head high; whether or not we, as a nation, can still boast of moral integrity; whether or not this Nation to whom the rest of the free world looks for leadership still has a soul.

But, if you still think I am merely getting unduly excited about a pet subject, then I beg your indulgence while I quote the opinions of a few very well qualified persons on the subject.

On June 15, 1955, only five days after my remarks in Baltimore, a distinguished colleague of mine, the Honorable STYLES BRIDGES, senior Senator from the State of New Hampshire, inserted in the Appendix of the CONGRESSIONAL RECORD an article on Professionalism in Soviet Athletics.

The article was written by John Washburn of Hanover, N. H. It was published in the Concord Monitor, Concord, N. H.

Mr. Washburn, who served in the Army in Korea in 1945 and 1946 as a Russian interpreter, is now a sportswriter for World Tennis and the author of several articles on tennis behind the Iron Curtain. From 1950 to 1953 he was instructor in Russian at Dartmouth College.

Here is what he had to say about the relentless Soviet sports offensive, and I quote:

"The great Soviet Encyclopedia, in its entry on Dynamo, the oldest and most powerful Soviet athletic organization now in existence, confirms the fact that training camps for young Russian athletes do exist by its statement: 'For the training of young cadres of athletes from the youth of Dynamo, the young dynamovite (yuni dinamovets) which has raised many champions and U. S. S. R. recordholders was created.'

"It ought to be noted, in passing, that dynamo is the athletic organization of the secret police and organs of state security.

"There is considerable material to prove that all top Soviet athletes are professionals, by any definition except the Communist-approved definition.

"The official Soviet Government position on professionalism in athletics was stated in detail by N. K. Antipov back on October 7, 1934, at a meeting of the presidium of the all-union Soviet of physical culture, and, since no other official viewpoint has been publicly expressed, we can assume that it is the official one.

"Said Antipov:

"'Our instructor, by bourgeois concepts, is, of course, a professional. We have thousands of such people, and we shall have even more. How can there be a question about allowing our instructor to enter competitions? In our country an instructor is just as much an athlete as anybody else.'"

Mr. Washburn goes on to point out example after example testifying to the rank professionalism of Soviet athletes.

He proves conclusively that they are paid by the state.

He offers adequate proof that they are official pawns of the government.

He shows beyond a shadow of a doubt that they are not amateur athletes in any sense of the word.

And, Mr. Washburn advises, and I quote: "While there is still time to avoid another debacle like Yalta from occurring at the 1956 Olympic games," steps should be taken by the International Olympic Committee to determine if Russia will be willing to abide by the rules of the Olympic games. If she will not, Mr. Washburn says—and these are his exact words—"Then Soviet masters of sport should be termed 'professionals,' and banned from Olympic competition."

After I had prepared my Baltimore remarks, the June 1955 issue of Life magazine carried a very illuminating article. It was written by Yuri A. Rastvorov, a former Soviet secret agent, and was entitled "Red Amateurs Are Pros."

I invite your attention to a few pertinent observations of Mr. Rastvorov, and again I quote:

"In the 17 months since my flight from the Russian Intelligence Service I have studied international sports with particular interest from the viewpoint of a fan and a former athlete in the Soviet Union. I was at once

amazed by the gulf between the United States and the Soviet attitudes toward sports. I believe that if Americans do not learn just how complete this difference is before next year's Olympic games, they may be in for some rude shocks. Americans have to realize that such terms as 'amateur' and 'voluntary' are totally irrelevant in the U. S. S. R. Soviet teams are not organized; they are assembled as parts of a great State machine. Soviet teams do not play at their sports; they work at them.

"As a member of the Russian generation that grew up after the revolution and later as a member of the Soviet Intelligence Service, I had very full opportunities to observe the total regimentation of Soviet sports. As a youth I was trained in the military skills that were compulsory sports requirements for young Soviet citizens. As a young man I learned of the flagrant special privileges that are given Soviet sports stars, and later in a Siberian prison colony I saw what happened to athletes who were suspected of abusing those privileges. I learned that no Soviet team is sent into foreign competition unless it is practically certain of winning, although this may involve bribing of judges and referees. Finally as an espionage agent I saw how the machinery of Soviet Intelligence is constantly at work evaluating foreign athletic capabilities just as it evaluates foreign military capabilities."

Mr. Rastvorov goes on to emphasize example after horrible example testifying to the indisputable professionalism of the Soviet musclemen who masquerade as amateur athletes.

He proves conclusively that, in flagrant violation of Olympic rules and regulations, they are subsidized by the Kremlin.

He offers adequate proof that they are nothing but monstrous robots following the dictates of the international Communist conspiracy.

He shows beyond any shadow of a doubt that they will have a criminally unfair advantage over our young people who are dedicated to common decency, honesty, and fair play.

Also, after the preparation of my Baltimore remarks, the June 1955 American Legion Magazine featured an article by Arthur Daley. Mr. Daley didn't concern himself particularly with flagrant perversion by Russia of the spirit of the international Olympics. Rather, he boldly outlined the staggering results which this diabolic slave-State has been able to produce.

Here is Mr. Daley's startling revelation as set forth in the pages of the American Legion Magazine, and I quote:

"A decade or so ago the U. S. S. R. was in the Middle Ages, athletically speaking. Now it's in the atomic age.

"If you need a few examples, here are some which should open your eyes. This is what the Soviet athletes did in various championships last year:

"Speed skating: Swept all 5 men's championships and took 4 out of 5 women's titles.

"Skiing: Won 2 men's and 2 women's championships, thus muscling in on the Scandinavian monopoly for the first time.

"Gymnastics: Won 5 of 7 championships for men and 3 of 6 women's. Won both men's and women's team titles.

"Wrestling: Won 3 of 8 championships, more than any other nation.

"Rowing: Won the grand challenge cup at Britain's Henley Regatta.

"Weight lifting: Won 4 of 7 championships and took the team title.

"Shooting: Won 7 of 9 championships and 6 of 9 individual championships.

"The closest thing to a world championship in track and field was the European title games. The Russians won them.

"The comrades also set world records for the 3-mile run, for the 5,000 meters, for the 400-meter hurdles, and for the hammer throw while their Amazons set 9 more world records. Their male swimmers set two.

"And if all these statistics don't give you a chill, it's worth mentioning that there isn't a Russian track and field record—except the high jump—for the 19 standard Olympic events that's older than 4 years. Ten of them were made in 1954."

And so, Mr. Daley dramatically illustrates the results obtained by the Red Soviet overlords as they wantonly befoul the spirit of the Olympics by making a propaganda weapon of amateur sports.

He demonstrates effectively that the athletic Frankstein monsters of the Soviet regime are, first, last, and always, determined to be ruthless winners by fair means or foul.

He offers adequate proof that their cunning masters within the Kremlin walls have stockpiled them just as surely as they have A- and H-bombs.

He shows beyond any shadow of a doubt that these so-called amateur athletes are not sportsmen in any sense of the word. Just one more devilish weapon in the Communist cold-war arsenal to be used in their relentless drive for superiority in every phase of human existence.

Mr. Daley concludes the second portion of his articles with this dire warning—these are his prophetic words:

"Brace yourselves, boys, and accept an unhappy fact. When the 1956 Olympic games are ended, the Soviet scoreboard will not be blank. It will be heralding its news to the world in letters and in figures of red."

The sports columns of the New York Times of April 3, 1955, gave a graphic illustration of the size of the Soviet athletic program.

In an article written by Clifton Daniel it was asserted that "The Soviet Government has appropriated this year more than 30 billion rubles" for its physical culture program.

Mr. Avery Brundage, president of the International Olympic Committee, has warned that Russia "is building the greatest mass army of athletes the world has ever known."

I could go on and on and further substantiate my charges that the slave masters of the Kremlin are brazenly befouling the international Olympic games.

But why belabor the issue any longer?

Need I offer any more proof?

Inasmuch as the Russians have already walked away with the seventh winter Olympic games which were recently held in Italy, and since it is a foregone conclusion that they will do the same in Melbourne, it is too late to worry about an intensified program to prime our youth so that they may match the skills of the Russians.

We couldn't do this even if we wanted to.

We follow the rules.

The rules stipulate only 3 weeks of training and a strict amateur status of participants. This automatically precludes the possibility of meeting the Russians on their own terms and on equal grounds.

And, since these animated beasts of propaganda are not even sportsmen or athletes, we shouldn't worry whether we beat them or not.

What, then, is my complaint?

What am I getting excited about?

What do I advise?

Simply this:

This nation should do everything humanly possible to expose this gigantic international fraud and blackmail for what it is.

In fairness to our youth—who have never yet let us down in peace or war—we should do everything humanly possible to ban Russia and her barbaric goon squads from participation in the 1956 summer Olympics at Melbourne, Australia.

For, as I said nearly a year ago, if we allow the push-button athletes of the Soviet Union to run away with all the honors at the 1956 Olympics—without so much as a protest—and we start complaining afterward that they haven't complied with Olympic rules, we will be providing them with a razor-sharp, double-edged propaganda sword with which to run us through.

The winning Russian athlete will be flaunted as a symbol of strength, clean living, fun, courage, and fair play; a superior product of the dictatorship of the proletariat.

The complaining Americans will be ruthlessly propagandized as inferior products of a decadent, outmoded, capitalistic system, incapable of winning over the Russian athlete—and a poor loser to boot.

I am grieved by the sad lack of concern shown by American athletic officials—official American—and the American people as a whole, regarding this thoroughly deplorable state of affairs. These unprincipled disciples of the devil walked all over our youth at the winter Olympics and only mild and muted murmurs were heard on this side of the water.

This fact is quite amusing—if pathos is ever funny—in view of the extremely harsh and hasty action which we take against our own athletes.

As was reported in a recent issue of the Washington Post and Times Herald, Washington, D. C., our athletes cannot reflect the slightest taint of professionalism. If they do, they are banned forever from participation in the Olympic games.

Mr. Shirley Povich, talented sports writer for the Post, in his column, This Morning, outlined the case of famed mile-king Wes Santee.

Santee is a graduate of Kansas University and presently a proud member of the United States Marine Corps. He is alleged to have accepted more money for travel expenses to various track meets than the rules permit.

This, it is alleged, makes him a professional.

The American Athletic Union, which Santee claims offered him the money in the first place, has stripped him of his amateur rating forever. This of course prohibits him from participating in the 1956 Olympic games.

Mr. Povich in suggesting that the American Athletic Union has exploited the amazing talents of Santee to enhance its own gate receipts at various meets, asks this pertinent question, and I quote:

"And how come the AAU did not show the same vigorous interest in investigating those AAU promoters who propositioned Santee into violating the rules? Their sins are down in black and white on the financial statements of the meets they conducted, yet all they drew was a wrist-slapping reminder not to do it again."

Now, it is not my purpose to go into the relative merits of the case of Wes Santee who was this country's best hope in the forthcoming Olympic in the 1,500-meter or mile-run.

However, it does seem incongruous to me that our own athletic officials will mete out extremely harsh and apparently unjustified punishment to an American athlete, but accept the gross insults and deliberate violations of the Russians without a protest.

This is especially provoking because there is more than a reasonable doubt as to the real guilt of the accused. Indeed, my distinguished colleague, United States Senator FRANK CARLSON, of Kansas, considers the Santee case worthy of a congressional investigation.

I submit, in view of this case, that if American Olympic officials fail to protest the participation of the Russians in the 1956 Olympics, they will have automatically branded themselves as rank hypocrites.

Their failure to take a strong stand on this issue will be inscribed in athletic history as a personal insult to every American athlete participating in the Olympic games.

This strange silence in the face of Russian violation of the Olympic rules on the part of official America is perhaps understandable in one sense of the word.

I say "one sense of the word" because in these latter days there is a substantial and extremely vocal segment of our society which seems to have forgotten what common morality, integrity, honesty, and decency are.

They are bedeviled by a vast and consuming vision of a brave new world of angels and demons coexisting in peace, prosperity, and universal brotherhood. The collectivist society of their impractical dreams has economic equality and material comfort as its highest attainable goal.

This ridiculous notion has dimmed their senses.

It has darkened their vision.

It has dulled the voice of conscience.

In their mad rush to materialize and make manifest their wild dreams and schemes, they have no time for immutable truth. No time for moral indignation. No time for the unashamed honesty decency—yes, and patriotism—which shine forth with such brilliance from the pages of our glorious history.

These are the same people who saw nothing wrong in our participation in the Korean war. The flower of our youth was sent to the God-forsaken wastelands of that conflict to suffer without hope and to die without reason. They were forced to fight a war which they were forbidden to win—all for the brave new world of coexistence.

The self-styled architects of this futuristic Armageddon, however, were so blinded by their senseless vision, they could look upon mangled bodies, frozen limbs, and tortured minds without shedding a tear or suffering a twinge of conscience; the shrieks of the dying and the stench of the dead failed to move them.

So, perhaps I'm asking too much to expect that they'll be moved to compassion by the mere prospect of our youth being unfairly pitted against the athletic automatons of Soviet Russia in the forthcoming Olympics.

It is this same vocal group—scared to death of war and enamored of a false peace—which refuses to see anything wrong with sitting in the council chambers of the United Nations—making deals with Russia and her satellites. These people wink at daily violations of the fundamental precepts of the U. N. Charter which they swore to uphold.

Perhaps I'm asking too much to expect that they'll even raise an eyebrow at the mere prospect of violation of the Olympic rules.

And, it is this same vocal group which is eager to extend recognition to the murderous tyrants of Red China—the wholesale slaughterers of American youth.

Perhaps I'm asking too much to expect that they'll be at all concerned about the figurative slaughter of American youth on the athletic field.

But, even though this segment of our society seems to be the dominant factor in our national life, I am convinced that they represent only the temporarily confused mind of America.

I cannot believe and will not believe that they reflect the great spirit of America.

I am convinced that that great spirit has yet to be heard.

It was the spirit of America speaking in the memorable spring of 1775. Patrick Henry was one American who lived by an ideal and had the courage to speak out for it.

Was he willing to supinely acquiesce in the face of British might?

No.

When the Second Revolutionary Convention of Virginia was meeting to determine whether to make an armed resistance to the Red Coats, he asked this question:

"Is life so dear, or peace so sweet, as to be purchased at the price of chains of slavery?"

He gave his own answer—an answer which we might profitably ponder at this time.

"I know not what course others may take, but as for me—give me liberty or give me death."

Those were the days when the spirit of America could make itself heard.

We might well ask ourselves today: "Is life so dear, or peace so sweet as to be purchased at the price of embezzling the pride, the honor, the spirit, the morale, and courage of our youth?"

It was the spirit of America speaking in the early 1800's when Stephen Decatur said: "Our country. In her intercourse with foreign nations may she always be in the right; but our country right or wrong."

Today, when there is absolutely no question as to the rightness of our country's position, shall we be less eager to defend her national honor?

Shall we be less eager to defend the honor of her youth?

It was the spirit of America speaking at Springfield, Ill., in 1837. In that proud year of American history, Abraham Lincoln asked a significant question.

"At what point then," he asked, "is the approach of danger (to this Nation) to be expected?" And his answer was one which we might well ponder at this moment.

"If it ever reach us," he said, "it must spring up amongst us, it cannot come from abroad. If destruction be our lot we must ourselves be its author and finisher. As a Nation of freemen we must live through all time, or die by suicide."

I say at this time without hesitation or qualification that if we are willing to turn our backs on our youth, we have already reached a dangerous junction on the road of national suicide.

And, it was the spirit of America speaking on the deck of the *Missouri* in Tokyo Bay, on September 2, 1945. Speaking of what man must do to insure peace, justice, and morality in our modern world, General MacArthur said:

"The problem is basically theological * * * it must be of the spirit if we are to save the flesh."

I submit that the great spirit of America should make itself heard in this particular instance.

It is time that we insist on justice, morality, honesty, and integrity instead of just talking about it.

We must expose the Russians for what they are.

We must ban them from the 1956 Olympic games.

We must be done with common cause with the devil.

We must chart a course of honor and stand behind our youth who are, after all, the America of tomorrow.

Mr. Rastvorov, whose words I have quoted previously, captures the problem in much more profound and lucid terms than my poor power permits.

With your permission, I will quote the conclusion of his article:

"[If the future] is to be productive in the sense that there is a spreading and diffusion of those values upon which our civilization is founded and from which it draws its strength, it will only be because we who are the present custodians embrace them with genuine conviction, live by them, and include them in our legacy to the world of our children * * * it is a matter of loving and hating the proper things; a matter of rejecting that which is false in favor of that which is known to be true; of putting principle before expediency, of cherishing universal values rather than those of limited worth and application. It is a problem of stark realism and honesty in the evaluation of fact * * * the future will depend upon the instruments which we are able to bring to its solution; our moral conviction, our vision, our wisdom, and our will."

I am confident that if and when the spirit of America shall make itself heard, we will not let our young people down.

The Jews Under Stalin's Successors

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, April 9, 1956

Mr. LEHMAN. Mr. President, the American Jewish Committee, of which I am an honorary vice president, has just released a fact sheet entitled "The Jews Under Stalin's Successors." This is an impressive report, from well authenticated sources, summarizing the treatment now being accorded to people of Jewish faith, now living behind the Iron Curtain, on the basis of their faith and descent. The American Jewish Committee is the oldest organization of American citizens of Jewish faith engaged in protecting and defending the civil and religious rights of Jews in this country and abroad. As a matter of fact, the American Jewish Committee was first organized 50 years ago to mobilize help and support for Jews who were victims of the notorious programs in Kishinev, Russia.

The American Jewish Committee, in pursuit of its central purpose, has not overlooked the fact that no minority group can be truly freeof discrimination unless all minority groups are likewise free. This organiaztion has been dedicated to the proposition that all of us—Jews, Catholics, and Protestants—and all so-called racial and national groups who are Americans, and who live in America, are equal before the law under our Constitution, and must be assured equality of rights.

Today, with Soviet-directed Communists attempting as strongly as ever to infiltrate free nations and their institutions, and with the Soviet hierarchy continuing to oppress the peoples of satellite countries, we must constantly review and assess the real facts concerning life behind the Iron Curtain.

The American Jewish Committee has collected the best data available on the persecution of Jews under the present Soviet regime. These data will, I hope, help to expose some of the current myths about the Soviets which are being assiduously spread in this country and abroad.

I ask unanimous consent that this fact sheet, as issued by the American Jewish Committee, be printed in the Appendix of the RECORD.

There being no objection, the fact sheet was ordered to be printed in the RECORD, as follows:

THE JEWS UNDER STALIN'S SUCCESSORS

In judging the sincerity of the Kremlin's professed concern for the rights of nations

and groups outside the Soviet orbit, one valid yardstick is the treatment accorded to minorities in Communist countries.

The death of Stalin, the proclamation of "collective leadership," and the Geneva Conference raised hopes that the new Soviet leaders would show more respect for the human rights of Soviet citizens. It was also hoped that Stalin's successors would abandon the anti-Semitic policies which had reached a climax during his last years, and try to repair the damage done to the Jewish minority by discrimination and persecution.

These hopes have not been fulfilled. Although the Presidium of the Communist Party now governs collectively, the Soviet Union remains a one-party dictatorship, with brutal suppression of independent views, secret trials, and slave labor camps.

The Kremlin's foreign policy likewise remains substantially unchanged. Its drive for world domination now includes inciting the Arab nations against the Western powers as well as against Israel. Thus, Stalin's successors are ready to exploit anti-Jewish prejudices for the purposes of domestic oppression and foreign expansion.

During the past 3 years, there have been signs of leniency toward Russia's ethnic, religious, and cultural groups; but this easing has not been extended equally to Jews. There have been a few concessions—the release of the Moscow doctors; the cessation of open anti-Semitic attacks in the press; relaxation of the ban on Jewish emigration; and permission to conduct some public recitations in Yiddish. But these moves must be viewed against the full background of conditions prevailing for Jews today behind the Iron Curtain.

This fact sheet seeks to present that background as completely as it may be drawn from all available sources.

RELIGIOUS FREEDOM STRICTLY LIMITED

Those Jewish communities which have survived Stalin's reign are allowed to conduct religious services and participate in Soviet "peace" campaigns. On March 18, 1955, a peace manifesto signed by eight rabbis was published in Izvestia and widely publicized in the West. In July 1955, the Soviet delegation to the United Nations distributed an article asserting that Jews now had full religious freedom. Some synagogues were reopened. In January 1956, Jewish prayerbooks were reported to be in print—the first since 1917.

But these encouraging signs are overshadowed by the fact that the main provisions of the 1929 decree on religious associations still remain in full force. These regulations determine the true measure of religious freedom in the Soviet Union:

1. Religious communities must register with local authorities and submit membership rosters. Only persons over 18 years of age may join. Registration may be refused, but no grounds are specified in the law. No unregistered community may function. Official data on the number of communities and their members has never been published. The number of Jewish communities is estimated at about 100. The number of members is unknown.

2. Religious communities do not enjoy the rights of corporate bodies. They do not own their places of worship but can rent them from local authorities. The members are individually and collectively responsible for maintenance.

3. Community boards are elected by open vote. Authorities have the right to eliminate board members without giving reason.

4. Communities of the same denomination may elect regional and central representative bodies only with special permission of the authorities. The Russian Orthodox Church and some other denominations have such bodies. The Jews have not.

5. Activities are strictly limited to matters of worship. Among other restrictions, groups are expressly forbidden to assist members by charity or any kind of material aid; to organize meetings of children, youth, or women for the purposes of prayer, religious instruction, or biblical or cultural education; to maintain libraries or reading rooms. In buildings used for worship, no books other than those directly required for worship may be kept.

6. Young people may receive private religious instruction only in groups of no more than three. No religious instruction is allowed in any schools. Violations are punishable by force labor up to 12 months, unless they fall under heavier penalties for "counter-revolutionary" activities.

7. Theological instruction for prospective clergymen must be sanctioned by the Ministry of the Interior. The Russian Orthodox Church and some other denominations now have seminaries, strictly supervised by the secret police. Although all surviving rabbis are very old and there are no successors in view, the Jews have not yet been permitted to organize a rabbinical seminary.

8. Religious services and prayers are severely restricted. They may not be conducted without special permission except in regular places of worship, at cemeteries, and in hospitals, where last rites may be given only in private rooms.

Further limitations are imposed by the policies and practices of the Communist Party. The official Communist attitude toward the Jewish religion is best summarized by the authoritative Short Philosophical Dictionary. The latest edition, issued in 1954, characterizes Judaism as follows:

"Like any other religion, Judaism is uncompromisingly hostile to science, and preaches anti-scientific views on nature and society.

"The rabbis were always enemies of enlightenment and secular education, and persecutors of progressive thought. Judaism sanctifies social inequality and private ownership; it deifies the rule of kings and exploiters * * *

"The rabbinical doctrine of Messianism—the coming of a heavenly savior—serves as a means of dulling the class consciousness of the workers and of reconciling them to the domination of the exploiters. These traits of Judaism are extensively used by the Jewish bourgeois Zionist nationalists to stupefy the Jewish toilers with nationalism, in order to cut them off from the common front of the class struggle waged by all toilers against capitalism."

The Party and organizations under its control—such as the Communist Youth Movement, the labor unions and the cooperatives—systematically campaign against religion in ways that expose devout citizens to public denunciation and discrimination. Despite a Party resolution of November 11, 1954, condemning administrative interference with the activities of duly registered religious groups, pressure against religious believers remains strong. They are denied advancement and subjected to ostracism. They may be expelled from organizations and even lose their jobs. Moreover, absence from work on religious holidays may be punished by fines and prison sentences.

CULTURAL LIFE THROTTLED

According to the official formula, culture in the Soviet Union must be "national in form, socialist in content." Within this framework, most ethnic groups maintain schools, theaters, periodicals and cultural institutions in their own language, even though strictly regulated to conform to the Party line. Soviet Jews, however are not allowed even this limited freedom.[1]

1. The Yiddish press is barred throughout the Soviet Union, with the exception of one small journal in Biro-Bidjan. Nor are there any Jewish newspapers or magazines in Russian or any other language—the last were silenced by the Government order in 1948.

2. Yiddish book publishing ceased in 1948 when the only Jewish publishing house was closed. All known Yiddish writers were arrested and deported. Two of them, Peretz Markish and David Hofstein, are known to have been executed. Others like David Bergelson, Itzik Feffer, Leib Kvitko were either killed or died in jail and penal camps. A few survivors were recently released.

3. Yiddish theaters were closed in 1949 on the official pretext that "Soviet Jews are not interested in Yiddish." A few Yiddish performances were permitted during the summer of 1955—recitals of poems, stories, and songs in Moscow and other cities. The attendance and reaction of the Jewish public indicated that, contrary to official dictum, Soviet Jews would enthusiastically support Yiddish cultural activities if given the opportunity.

JUSTICE STILL OVERDUE

The highwater mark of Soviet anti-Semitism was reached in February 1953, with the trumped-up charges against 15 Moscow doctors. On April 3, 1953, Pravda and Izvestia published a communique of the Ministry of the Interior, then headed by Lavrenti P. Beria, declaring that the 15 doctors accused of assassinating Soviet leaders Andrei A. Zhdanov and Alexander S. Shcherbakov and of plotting to kill several Soviet marshals were innocent, and that their confessions had been extorted by the secret police. Thirteen doctors were released; two are still missing.

In line with this reversal it was expected that the other Jews unjustly detained would be freed and that anti-Semitism would be abandoned as an instrument of Government policy. But developments over the past 3 years have not fulfilled these expectations.

1. Victims of persecution still suffer: During 1955 a few Jewish prisoners were released. But tens of thousands are still confined, according to reports of former slave labor camp inmates who have returned to Germany, Austria, and other countries.

Similarly, of all the Jewish victims of the Slansky trial and subsequent purges in Czechoslovakia, only one man—Israel citizen Simon Ohrenstein—was released. His cousin, Mordechai Oren, leftwing Mapan deputy to the Israel Knesset, remains in jail.

In Rumania sentences imposed on some of the Zionist leaders arrested in 1948–49 were reduced and the prisoners were released. However, they are still adjudged guilty of organizing the Zionist movement and promoting emigration to Israel—activities which were legal at the time they were conducted.

Since the Zionist movement has been outlawed in the Soviet Union for three decades, there can hardly be any genuine Zionists in that country today. Nevertheless many Jews stand convicted of counterrevolutionary activity allegedly motivated by Zionism. Others are charged with Jewish bourgeois nationalism, cosmopolitanism, or reactionary religious ideology. Descriptions of individual cases appear in such recently published books as Joseph Scholmer's Vorkuta, Antoni Ekart's Vanished Without Trace, Brigitte Gerland's Die Hoelle Ist Ganz Anders, and Wilhelm Starlinger's Limits of Soviet Power.

Typical of the "Zionist plots" fabricated by the secret police is the case of one group of Odessa Jews, whose offense consisted of having met a foreign rabbi visiting Odessa during the war. Many Jews were deported for having taught religion to young people or for having participated in Yiddish cultural activities back in the days when they were still legal. Often the fact that a Jew had survived German captivity or German occupation was considered sufficient proof of his treasonable activities. And finally, many

---

[1] In Poland and Rumania, a few Yiddish schools, theaters and cultural associations are retained to indoctrinate the Yiddish-speaking population in Communist theory. Working under strict Communist supervision, these institutions are violently anti-Zionist, anti-Israel and anti-Judaic in spirit.

others are serving time for "economic offenses" of which they were convicted in an atmosphere of anti-Semitic hysteria that followed the arrest of the 15 doctors.

Within the prison camps authorities often do not protect Jews from verbal and physical attack by coprisoners who are either common criminals or former collaborators with the Nazis.

2. Amnesty for Nazi collaborators but not for Jews: On September 18, 1955, the Soviet Government granted a broad amnesty to Soviet citizens who had collaborated with the Nazis during the war, including those who had served in the German army, police, and special extermination squads. Their criminal record was wiped out. Yet no amnesty has been granted to the Jews, who remain imprisoned while their persecutors are free.

3. Real culprits escape blame: Though some of Stalin's successors were parties to his anti-Semitic campaign, only a few former officials of the Ministry of State Security were punished for the false accusations against the Moscow doctors. One, Mikhail D. Ryumin, was shot after secret trial on July 7, 1954. His boss, Semyon D. Ignatiev, former Minister of State Security, got off with a temporary demotion in April 1953. Soon he reappeared as Secretary of the Communist Party in Bashkiria; in March 1954 he was elected to the Supreme Soviet; in February 1956, the 20th Congress of the Communist Party reelected him to the Central Committee.

4. Straw in the wind: In the summer of 1955, an anti-Semitic journalistic device, widely exploited in 1953, again cropped up in Soviet provincial press reports of economic crimes. In this series of reports, unusual emphasis was given to cases involving Jews by printing their names, such as Selik-Lev Davidovich or Josef Pinkasovich, in full, and repeating them frequently. At the same time, the number of Jews prosecuted for economic offenses suddenly increased.

5. Discrimination still official policy: With the admission in Pravda and Izvestia that the frameup of the doctors had been motivated by national enmity and racial hatred, open anti-Semitic attacks ceased in the press. However, anti-Jewish feeling is widespread and there has been no attempt to reeducate the population which is still infected by Government-sponsored anti-Semitic campaigns of the recent past.

Since 1953 silence on this subject has been broken only once. In July 1955 the magazine Party Life carried a long article on the nationality questions. While one short paragraph quoted Lenin's condemnation of anti-Semitism, there was lengthy reiteration of his and Stalin's violent attacks against the bourgeois nationalist ideas of the Jewish Socialist Bund, which has stood for the right of Jews to develop their cultural institutions.

In the Armed Forces, the diplomatic service, and some institutions of higher learning, discriminatory policies introduced by secret Communist Party instructions in the late forties and early fifties are still observed.

Although a few persons, mostly elderly, have been allowed to join their families in Israel, the official ban on Jewish emigration continues in force.

The Late Chauncey W. Reed

SPEECH
OF
HON. GEORGE MEADER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, February 10, 1956

Mr. MEADER. Mr. Speaker, I wish to join my colleagues in their tribute to CHAUNCEY REED.

It was my privilege to serve under CHAUNCEY REED'S chairmanship on the Judiciary Committee in the 83d Congress. His equanimity and fairness in presiding over the committee sessions, which were turbulent at times, were a contribution to the work of a busy and important committee which it will be hard to replace.

CHAUNCEY REED had the attributes of a great lawyer. His calm and dispassionate analysis of a legal problem, his persistent determination to arrive at a fair solution and his ability to harmonize conflicting viewpoints were his outstanding qualities. He was not a firebrand and spoke infrequently. But, when he did speak, he inspired confidence that his views were the result of careful reflection and mature consideration.

CHAUNCEY REED'S bereaved ones should take comfort from the knowledge that in a critical period in our Nation's history he contributed much to the accomplishments of the Judiciary Committee and the House of Representatives and was a stanch fighter in the cause of good government.

Women Voters Can Control Elections

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, April 9, 1956

Mr. MACK of Washington. Mr. Speaker, under leave to extend my remarks, I wish to insert an editorial which appeared March 23 in the Seattle Times. This article points out the important part that the women voters can attain in shaping the future policy of our Government:

IT WILL PAY THE POLITICIANS TO COURT THE WOMEN VOTERS

American women have the opportunity to play an influential role in the national election this year, as they did in 1952. They outnumber the men voters, and it will behoove both political parties to woo their favor.

According to latest Census Bureau figures, women comprise 51.2 percent of the citizens of voting age in this country. It is estimated that 105 million Americans could qualify to vote in November—53,700,000 women, 51,300,000 men. The potential women voters outnumber the men in 32 of the 48 States.

In 1952, a record number of women went to the polls—55 percent of the total number who were of voting age, according to the sampling polls. No previous presidential election had evoked so large a turnout of women voters. Still, their interest in politics did not equal the men's, for 73 percent of the men of voting age cast ballots at the polls 4 years ago.

Though it is impossible to differentiate the sexes in counting votes, the pollsters figured in 1952 that women were largely responsible for piling up the big majority for President Eisenhower. One poll indicated that 58.8 percent of the women who voted that year voted for Mr. Eisenhower. Without them his favorable margin would have been considerably narrower. But the same poll suggested that he would have been elected in any case, women or no women; it credited Eisenhower votes to 52.5 percent of the male voters.

The 1952 election stirred far greater interest in the feminine contingent of voters than they had ever displayed before. Ratification of the 19th amendment, which gave women the franchise, failed to produce the big vote that had been anticipated from the women in the immediately subsequent elections. The pollsters were not so active in those days, but it was estimated in 1924 that scarcely a third of the eligible women voters took part in that year's election.

In the 1940 decade women began to do better. Some 49 percent of the women of voting age went to the polls in 1940, but only 45 percent in the Truman-Dewey contest in 1948.

The big turnout of women voters in 1952 was attributed partly to Mr. Eisenhower's avowed determination to end the Korean war, to dissatisfaction with price inflation, and to charges of flagrant corruption in government. The war hero's own great personal popularity must have been an influential factor.

That popularity certainly has not diminished. Whether this year's issues will arouse as much interest among women voters as in 1952 depends, perhaps, on developments between now and November. If it is true, as many firmly believe, that women wield a salutary influence in politics when they choose to exercise it, it is to be hoped they will maintain, and even improve, this year the strong showing they made in the 1952 presidential election.

Flood Control Measures Endorsed

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, March 19, 1956

Mr. PATTERSON. Mr. Speaker, under leave to extend my remarks, I wish to have here inserted in the CONGRESSIONAL RECORD a striking and impressive statement of Mr. Sherman R. Knapp, who is president of the Connecticut Light & Power Co. Mr. Knapp is to be commended for his public-spirited interest in the New England flood-control program, and the words of wisdom contained in his factual statement should be given the careful attention of this entire Congress. I am pleased that Mr. Knapp, who is president of one of our Nation's great public utility enterprises, has endorsed the proposed Thomaston Dam on the Naugatuck River that would provide flood protection for certain areas in the Naugatuck Valley of Connecticut.

NEW ENGLAND FLOOD-CONTROL PROGRAM

(Statement of Sherman R. Knapp, president, the Connecticut Light & Power Co.)

The Connecticut Light & Power Co. is a public utility supplying gas and electric service in the State of Connecticut. Its service area embraces about two-thirds of the State, including the three watershed areas of the Thames River in the east, the Connecticut River in the center, and the Housatonic River in the western part of the State. Included among its 390,000 gas and electric customers, the company supplies about 1,800 industrial plants. The State is extremely highly populated and industrialized. Furthermore, the greatest industrial development is situated in the valleys of the three principal watershed areas of the State.

The Naugatuck Valley of Connecticut, in the Housatonic River watershed, is the brass manufacturing center of the country, and is a vital industrial component of our State's economy. This area produces not only vast quantities of brass and copper products but also a wealth of other important industrial products for peacetime and military use.

The devastation wrought by the floods in 1955 had a serious and prolonged effect upon this part of Connecticut. The impact of the 1955 floods, and the still existing threat of future floods, create a continuing and serious obstacle to the growth and economic development of the Naugatuck region. If existing industries and businesses are to operate successfully and if new companies are to be attracted to this area, they must be assured that the future high-water damage will be curtailed or controlled. The proposed Thomaston Dam on the Naugatuck River will provide an important measure of flood control for the valley and we, therefore, urge that appropriations be granted so that this project can be started at the earliest opportunity.

The flood-control problem in the Connecticut River watershed is dependent upon the construction of storage reservoirs upstream in the States of Massachusetts, New Hampshire, and Vermont. This problem, therefore, is regional in scope. The plan, proposed by the United States Corps of Engineers and approved by the New England Governors' Conference, is of vital interest to the region as a whole and especially to Connecticut. We urge the appropriation of funds for all the projects proposed by the Corps of Engineers for the upper reaches of the Connecticut River in order that their construction may be initiated at the earliest possible time. It is our belief that such a network of storage dams as now proposed is long overdue and absolutely essential if we are to obtain a satisfactory degree of flood control security for the people of the Connecticut River Valley area.

It is evident in recent years that the hurricanes and storms which produce floodwaters in Connecticut and New England are more frequent and destructive than has heretofore been assumed. This fact emphasizes the urgent need that the program of the Corps of Engineers be started and carried to completion without delay.

Greek Independence Program

EXTENSION OF REMARKS
OF
HON. O. C. FISHER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 9, 1956

Mr. FISHER. Mr. Speaker, upon the occasion of a Greek Independence Day celebration on March 25, 1956, held in San Angelo, Tex., a very able address upon the subject of Greece and her contribution to civilization was delivered by State Senator Dorsey B. Hardeman. Under leave to extend my remarks, I include Senator Hardeman's remarks:

Mr. Chairman, my friends, and fellow citizens, this occasion is one of unusual significance and interest to me. I am highly honored on having been invited to participate in your program commemorating the anniversary of the independence of Greece. I have prepared appropriate resolutions in the past, recognizing Greek independence, which were adopted by respective legislatures of the State of Texas, of which I happened to be a member.

Long have I counted you among my friends, both personally and politically. I am grateful for the help you have always given me.

This meeting affords the opportunity of trying to publicly express my appreciation and admiration for some of the many contributions and influences your people have made, almost since the beginning of time, and continue to make, toward the development of all phases of civilization.

True, there is a vast difference between ancient and modern Greece, but the thread of history courses back, in unbroken sequence, through the centuries, to the earliest days of antiquity.

No race or country can boast of a more glorious, romantic and constructive history and advanced civilization.

As a tribute to its memory and in deep appreciation of its contributions in all fields of human endeavor and intellectual attainment, let us light the pages of the present with the sunbeams of the past, as we recall some of the glory that was Greece. This is in no sense meant as any disparagement of modern Hellas, which had its beginning on this date in 1821 when the Grecian patriots of that day revolted to throw off the Ottoman fetters with which they and their ancestors had been bound for about 400 years. Well-knowing that what is past is but prologue, I hope I may not be considered out of order as I attempt this somewhat sketchy résumé of some of the highlights of your glorious past. Rather, I trust that even such limited recounting thereof may serve to stimulate and inspire all of us to a rededication in the cause of restoring constitutional integrity in our Government as we find the origin thereof in the constitutional law of the golden age of Greece.

The history of Greece—profound, classical, imposing—is hardly replete, in a sense, without a review of the grandeur that was Rome, but the proprieties of the hour admit of references thereto only in rare instances if, indeed, at all.

The very antiquity of Greece renders it difficult to determine her beginning. The first Olympiad in 776 B. C. is accepted by some, including Grote, as the date, but archaeological research in the past century has produced evidence of a much earlier beginning—perhaps, the second millenium. This evidence of excavation has posed many questions of race, script, and religion to the scholars which cast doubt that the civilizations of these earlier ages—Minoan and Mycaenean—belong to an Hellenic people.

I an content to begin with the heroic, or Homeric age which followed the first Olympiad. This was followed by the period in which Greece attained her greatest renown and won for it the designation of "golden age."

Homer, as the author of the Odyssey and the poet of the Illiad, was the bible of the ancient Greeks and Greek constitutional development would be unintelligible without the poet.

The Homeric state saw the first germs, not only of oligarchy—that is, rule by the few—and the democracy of later Greece, but also of all the various forms of constitutions known to the Western World.

(Incidentally, it was in Homeric society that women enjoyed a greater freedom and received greater respect than in the Athens of Sophocles and Pericles—the latter being the great Peloponnesian orator. It is also interesting to observe that the women of Greece were given suffrage and voted for the first time on February 19 of this year.)

With the intellectual, political, cultural and religious contributions she was making, the dawn of the sixth century B. C., ushered in the Golden Age and saw the Greek race and its influence extending from the Pyrenees to the Caucasus and from southern Russia to northern Africa. By such time she had attained a fully developed national self-consciousness designated by the national name of "Hellenes."

Then came the Persian conquest under Cyrus and the closing of the East to Greek influence and enterprise. This conflict saw an attempt to present a common resistance by the city-states, as they were known, of Greece. After the stinging defeat by the Persians at Lade in 494 B. C., later redeemed on the plains where "The Mountains looks on Marathon, and Marathon looks on the sea," 490 B. C., employing the strategy of Miltiades, the Greeks were stimulated to a heightened sense of national unity which foretold the formation of conferedations or leagues for mutual defense—to some of which reference may be made.

Two important political movements thus evolved—the imperial and the democratic. Theretofore, Greece had meant, politically, an aggregate of independent city-states, with the principle of autonomy accepted as the most sacred of all political principles.

This principle was embraced by no less than the Founding Fathers of our own great land in the establishment, in 1787, of "an indissoluble Union of indestructible States," theoretically, preserved in the 10th amendment, but which has been so often violated, with impunity, by the arrogation of powers and countenanced, as well as, unfortunately, invited, encroachments of the Federal Government in the form of grants-in-aid, that it has become "SOP"—standard operating procedure—for those who hold no regard for constitutional integrity but resort, rather, to sociological, psychological, political and economic considerations in justification thereof.

It was Sparta of Peloponnesia—whose popular fame stems from the heroic and desperate courage displayed by her sons, to which the world thrills, as they fought under Leonidas to hold the pass at Thermopylae and died there in "obedience to her command," who led the formation of a very loose federal union among the majority of her sister city-states.

This effort at federalization was followed by the Dalian Confederacy in 477 B. C., under Athenian leadership. It was, perhaps, a noble effort to transcend the isolation of the current political system for a confederation of autonomous allies. It, however, was founded upon the unworkable theory of collective security. Athens, always associated in the popular mind as Greece, being the dominant party, condemned the league, itself, to failure and, shortly thereafter, came the Athenian empire—thus inaugurating imperialism in Greek political practice.

Strangely, the so-called diplomats and statesmen of today take no heed of the precedents of the past as they attempt to form international organizations on the quicksands of unworkable premises. I am, of course, referring to the present-day United Nations organization. To make it work, even idealistically, necessarily involves the surrender, in varying degree, of national sovereignty and integrity and thus, theoretically, every signatory state must become and be equal in every respect with every other member. Without this, such an organization is doomed, as was the Delian League.

Instead of accepting the experience of the ages, there are those who adopt the head-in-the-sand attitude that everybody will be a good boy once he joins our organization. This is the ill-conceived concept of the one-worlders and the Atlantic unionists.

But back to the ascendancy of the Athenian Empire following the collapse of the Delian Confederacy. For awhile, Athens thrived as a power contributing to the development of civilization—especially in political advancement. Her constitution, attributed to the handiwork of the great philosopher and statesman, Aristotle, who lived from 384–322 B. C., was both historical and descriptive. It followed, somewhat, the

earlier Solonian constitution which struck at the roots of privilege by including wrongs done to citizens individually in the category of wrongs done to the state. Cleisthenes, also, was an extraconstitutional lawmaker and gave substance to the form of the constitution of Solon, as well as gave the democracy of the country a new electoral basis in which old associations and vested interests became ineffective.

The codification of the law of Athens by Dracon gave to the world one of its great codes which ranks with those of Hammurabi, Moses and later, Justinian.

A deterioration in moral and constitutional integrity among Athenian leaders, accompanied by the apathy of the people, led Athens to the policy of appeasement. From such lessons of history, we should be forewarned and thus avoid the inevitable consequences of destruction.

Her "foreign policy" found its root in the idea of "balance of power" as enunciated by the great Grecian orator, Demosthenes, who decried the decaying patriotism of the country as he foresaw the damaging results to soon befall the Athenian world with the allegiance of the people divided between the cause of empire and the cause of autonomy, thus paving the way for the rise of Macedon. Adherence to this policy invited outside interference, which was provided by Phillip II, and so successfully pursued by his illustrious son, Alexander, as he rode forth on his favorite Thracian horse, Bucephalas, and dispatched the Gordian knot. So attached was the conqueror to his horse, that he commemorated his death in 326 B. C., with the building of a city, Bucephala.

It was Alexander's short, but spectacular, career—33 years—that became a major turning point in history. To him, as one of the very few, it was given to modify the whole future of the human race. Alexander the Great originated two forces—Hellenism and the monarchical ideal. He made the person of the monarch sacred; from which the west, subsequently, evolved the spurious doctrine of "the divine right of Kings" and which, to maintain, has left the pages of history strewn with the wrecks of humanity and stained with the blood of martyrs.

In creating Hellenism, he provided, for the first time, a common type of civilization, with a common language, literature and art, as well as a common form of political organization.

For centuries following Alexander's death, classic Greek was the language of literature and religion, of commerce and administration. He created a universal empire and a universal culture in the 70-odd cities which he built. While his temporal empire perished at his death, nevertheless, its central ideal survived, namely, that of municipal freedom of the Greek pole is within the framework of an imperial system.

With the collapse of the Achaean League and the fall of Corinth at the beginning of the Roman conquest in 146 B. C., Greek political power waned but her influence on the development of all phases of civilization continued unabated, so strongly was her background entrenched in sound principles.

This was a source of irritation to the Roman conquerors after the fall of the empire of the Caesars in 476 A. D., and lesser Roman rulers, such as Constantine and Justinian I, who had no regard for Greek culture, set out to definitely counteract Hellenism (1) by propagating Roman law in Greece, (2) by impairing the power of self-governing city-states and (3) by closing the philosophical schools at Athens, well knowing that "The cultivated mind is the guardian genius of democracy," as stated by Lamar.

Greece became a weakened province and her culture declined rapidly. Slavonic incursions became more frequent until the Slovenes were finally repelled by the Empress Irene, through success of arms, with the gains thereby to be later consolidated, with the aid of the Greek clergy, about the middle of the ninth century.

After the Byzantine period, which was dissolved by the Latins in 1204, appears the beginning of Ottoman influence.

Constantinople had been the capital of the Roman Empire in the East from 330 A. D., until it fell to the Turks in 1453. The Turks, thereafter, wielded dominion over the area of Greece until the early part of the 19th century.

Being a liberty-loving people and believing in the governmental principle of autonomy, it was inevitable that the smoldering fires of Greek freedom would sometime, somehow, emerge in a great conflagration of independence. The influence of the French Revolution contributed to the rekindling of the flames of nationalism and a burning desire for freedom and independence in the Greek people.

The Greek Revolution of 1821 was, therefore, not unexpected. Lord Byron espoused her cause and came to Missolonghi where he died while aiding in the war effort in 1824. Fortunately, also, like the earlier Serbian revolt in 1804, she received help from Russia—not altogether altruistically, however, since Catharine II coveted Constantinople and thus encouraged the Greek revolt, resulting in the establishment of the independent kingdom in 1833 and the beginning of her modern history.

Time does not permit a detailed discussion of the War of Greek Independence, but I can assure you of Greek extraction, as well as all others, that the valor and sacrifices of her sons and daughters—the forebears of many of you here tonight—had their counterpart at Valley Forge and at the Alamo, the latter battle prompting the orator of later day to proclaim that "Thermopylae has its messenger of defeat; the Alamo had none."

The spirit of Thermopylae, which carried the Greek people to independence in 1821 under the leadership of Marco Bazzaris, enabled them to successfully repel, with brilliant strategy, the invasion of their homeland by the Italian dictator on October 28, 1940, in World War II. Mussolini's defeat was humiliating to the Axis and caused Hitler to intervene with German reinforcements in April 1941. The continued resistance by patriotic guerrilla bands provided entertainment for the German occupation forces. Thus, even in occupation, the Grecian patriots continued to make wholesome contributions to the cause of freedom.

Of course, Greece of modern times has never regained the heights of the Homeric Age—neither have other nations of glorious antiquity—Egypt, Babylon, Persia, Carthage, Rome, to mention some. The times and world conditions have not been, and are not now, conducive thereto.

Political, social, and economy factors—described in modern-day language best, perhaps, as "geo-politics"—have fostered a new and different civilization. The old balance of power policy of ancient Athens has been practiced in Europe, as well as in other parts of the world, in varying degree, since before the time of Metternich and power politics is not without its disciples today.

Modern Greece, however, despite internecine feuds and other internal disturbances instigated, as in recent years by the communistic Soviet, nevertheless, has resumed a respectable position among freedom-loving peoples.

Regardless of her curtailment in the exercise of modern-day political, military, and economic might, as measured by the standards of material assets, which all too often and unfortunately seem to be the test, history cannot erase, time cannot efface, memory cannot forget, civilization cannot evaluate the glory that was Greece, and the profound effect the Homeric and Golden Ages and subsequent centuries have had, and will continue to have, upon the world in religion, science, medicine, astronomy, philosophy, mathematics, literature, sculpture, art, architecture, oratory, government.

The Hellenic influence continues through the diffusion of Greek culture rather than through blood. A knowledge of the names and accomplishments and contributions of her famous sons was once considered essential to ordinary education, but are now studied, perhaps, and recalled only by scholars, yet they constitute a galaxy of the great. Even so, some Greek names are among the most familiar to people generally, such as Helen of Troy, Achilles, Hercules, Atlas, Midas, Bacchus.

The physician of today takes his oath of service to humanity as prescribed by Hippocrates. The great lessons of Aesopian fables are unsurpassed in moral value. The tragedians, playwrights, and poets, in the persons of Aeschylus, Sophocles, Euripides, and Aristophanes, are figures of great significance in human history.

The rhetoric of Corax of Syracuse, transported to Athens by his pupil, Tisias, doubtless aided the inspiring Phillipics of Demosthenes, the eulogies of Pericles, the pleas for Panhellenism of Isocrates, called the prince of rhetoricians, the eloquence of Hypereides, Aeschines, Lycurgus, Demetrius of Phalerum, and Deinarchus, whose importance to the historian cannot be measured.

The father of history, Herodotus, who wrote of the Persian wars; Thucydides, with his record of the Peloponnesian War; and Xenophon and his Anabasis, an account of the expedition of the Ten Thousand, and his eulogy of Agesilaus, the Spartan King, and the historians of Alexander's reign—Ptolemy, Aristobulus, Callisthenes, Onesicritus, and Nearchus—whose chronologies recount the theme of this talk—"the glory that was Greece."

The great mathematician and inventor, Archimedes, who proposed to move the earth if given a place to stand, devised numerous ingenious contrivances, including the water-screw, and his extension of geometric methods of exhaustion, as originated by Exodus and followed by Euclid, made him famous.

The Praxitelean designed friezes of archaic decorative sculptures along the entablatures of the magnificent temples of Assus, of Athena Nike, of Apollo near Miletus, the Athenian Treasury at Delphi, the great altar of Zeus at Pergamum, of Poseidon and others, including the most famous of all, the Parthenon on the Acropolis with its Panathenaic friezes, have inspired the artists and sculptors of subsequent centuries.

(Incidentally, the only replica of the Parthenon stands in Centennial Park in the capitol city of my native State of Tennessee.)

The paintings of the masters—Polygnotus, Micon, Panaenus adorning the great porticos of Athens and Delphi have disappeared but their styles, along with those of Zeuxis and Aristides and others have long influenced their successors.

The philosophy and logic of the great Athenian, Socrates, who "drank the hemlock" following his conviction for impiety in 399 B. C., imbued his disciples—Alcibiades, Plato, Parmimedes, Zeno, Aristotle, with his announcements of inductive arguments and universal definitions and the founding of the doctrine of absolute morality based on the conception of a felicity which is of man as man, set the course of philosophy and reasoning for all time to come.

The development of Greek law came through the city-states. Revolutionary changes occurred in the transition from family or tribal justice to the constitutional law of the city-states about the seventh century, B. C. During the ensuing 300 years the constitutions and codes of Solon, Cleis-

thenes, Dracon, and Aristotle tended to converge as the movement in Greece was toward increased uniformity while at the time preserving the principle of autonomy. From such came the constitutions of the Western World, and especially do we recognize the similarity of provisions of our national charter to the principles of Grecian constitutional law as relates to the doctrine of States rights.

The oracles of ancient Greece, at which were revealed the divinations of the great gods and goddesses—Zeus, Apollo, Aphrodite, Athene, Artemis, Ares, Hermes—became the symbol of unquestioned authority by which men of all subsequent generations have been adjured to speak, as said by Peter, if at all," as the oracles of God."

The revival of the Olympic games by the Western World is but another tribute the modern age pays to the contribution of the Golden Age of Greece in the field of physical contests, whose winners celebrated their victories with the singing of hymns by the poet Archilochus.

The list of great contributions, as well as of great contributors, to the development of all civilization could be extended ad infinitum, but time does not here permit. Only one other reference will be indulged and that relates to her contributions of language and to religion.

Her classic language carries the adoration of Chistendóm as the language of the New Testament. Her religious appreciation and superstition was perceived by no less than the Peerless Apostle to the Gentile World, as he passed along and beheld their devotions, followed by his masterful address on Mar's hill to the Men of Athens, declaring unto them "The Unknown God" whom they "ignorantly worshipped," appealing to their intelligence and developing, with unanswerable logic, and with timely references to their own system of worship, the proposition that the "God that hath made the world and all things therein dwelleth not in temples made with hands" as did their great god Zeus in the temple on Mount Olympus, "neither is worshipped with men's hands" and in whom "we live and move, and have our being, as certain also of your own poets have said."

The heritage that has been yours—throughout the ages is reflected in the qualities of good citizenship you and your fellows practice in your adopted land for some, as well as being the native land of younger generations. Your part in civic enterprise—national, State, or local—has always been noteworthy and commendable. Your contributions to the community and Nation, in peace and in war in defense of freedom has marked you as patriots. The spirit of the ancient Greeks of the Golden Age pervades your citizenship as reflected in your conduct and attitude as members of the body-politic of this State and Nation. We could well use more such men and women; boys and girls of your type in the further and future development of our great land and in the cause of constitutional government and national integrity. May the illustrious heroes of the glory that was Greece inspire you to greater fields of service and your conduct be an example of those of all lands seeking to preserve freedom.

With the observance, in appropriate manner, I hope, of this anniversary of Greek independence, so meaningful in the course of freedom, let us, from them and other honored dead, take increased devotion to that cause for which they gave the last full measure of devotion; that we here highly resolve that these dead shall not have died in vain, and that this Nation, under God, and any nation so conceived and so dedicated, shall have a new birth of freedom, and that government of the people, by the people, for the people, shall not perish from the earth.

Happy Ending

EXTENSION OF REMARKS
OF
HON. GEORGE MEADER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 29, 1956

Mr. MEADER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the Adrian (Mich.) Daily Telegram of March 16, 1956:

HAPPY ENDING

The news that a United States Government tax-payment check for $87,195 has been received in Adrian is a happy ending to a 3-year-old struggle. Within due time Madison Township also will receive a similar check for $35,000.

The funds will go to municipal Adrian, to Madison Township, to the two school districts, and to the county. All of these local units of government have been pinched financially because the Federal Government decided in 1953 that it was not obligated to make payments in lieu of taxes on the United States Air Force plant on East Beecher Street. Almost without warning the local units lost about 10 percent of their tax revenues. The financial pinch has been acute at times.

The Federal Government's tax payment money will be welcome in Adrian and Madison Township. But the victory for the city, the township, and the school districts cannot be measured strictly in dollars and cents. An important principle was involved here. It was a question of whether the United States Government, the owner of property in an industrial and a competitive field, had the moral right to claim tax exemption. In the case of the United States Air Force plant in Adrian the Government, at the same time, has received certain financial benefit from the property under a lease arrangement with the Bridgeport Brass Corp.

Operating under a no-tax-liability policy the Federal Government theoretically could lease its properties to private operators at a lower rate; it could compete with private industry, if such was the desire, from a most enviable position. Without tax liability the Federal Government could produce for less, and sell for less, at the expense of private industry. Every plant owner who could escape $87,195 a year in taxes either could sell for less and produce for less or pay higher dividends. It was a nationally unhealthy situation with the Federal Government claiming tax exemptions on industrial properties. And some 99 such plants now exist in the United States.

The United States Congress was wise in adopting legislation to deal with the matter. The stopgap legislation will be effective through 1958. In the meantime it is hoped that some permanent solution can be reached. The Federal Government always should be liable for local taxes when it operates or exists in competition with private interests.

It also is morally wrong for the Federal Government to say that municipalities must furnish water and sewer services, police protection and fire protection, streets and highways for such plants without tax responsibility. If a showdown ever developed, the municipalities probably would be within their rights in denying the Federal Government such services without tax or some other type of payment. At the same time it is morally wrong for the Federal Government to claim that it has no responsibility for the schools, or the township government that serve such plants and the people who work in them. So it is a victory in principle for Adrian and Madison as well as a victory in dollars and cents.

Mayor Porter is to be commended for his determination in protecting Adrian's rights in the problem. He personally furnished much of the evidence on which congressional legislation was based. And it was Representative GEORGE MEADER, of the Michigan Second District, who led the fight for that legislation in Congress, ably assisted by the Michigan Senators. Adrian and Madison have good reason to rejoice today, along with 98 other communities where Government plants are located.

But it must be remembered that the legislation under which that $87,195 check comes to Adrian is of a temporary nature. Within 4 years permanent legislation must be adopted to make certain that the Federal Government, especially when it enters the field of private industry, assumes its fair and just tax responsibilities. Now that the war emergency has ended, perhaps the best answer of all would call for the sale of Government-owned plants to private interests. The Federal Government has little reason to be in business today, and certainly not to the extent that it was in 1943 and 1944.

Kalkaska Air Force Base, Kalkaska, Mich.

EXTENSION OF REMARKS
OF
HON. VICTOR A. KNOX
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 9, 1956

Mr. KNOX. Mr. Speaker, in a few days the Members of the House of Representatives will be called upon to vote on legislation authorizing the defense military construction program for fiscal year 1957. That legislation authorizes construction amounting to a total of $2.2 billion for projects deemed vital to our national security.

It is impossible for us as Members of Congress to be fully familiar with every aspect of this important legislation. However, when an instance arises with respect to such legislation, that threatens to squander the taxpayers' money and irresponsibly retard the development of a defense installation described as urgent by the Department of the Air Force, it is essential that the matter be called promptly to the attention of the membership of this distinguished body. I regret that such an instance is contained in the defense military construction bill, H. R. 9893. I refer specifically to the portion of the bill authorizing the appropriation of funds for the Kalkaska Air Force Base, Kalkaska, Mich.

In the action of the House Armed Services Committee in transferring the location of the base from Kalkaska, Mich., to Manistee, Mich., there can be no question that the American taxpayers' money will be squandered and the defenses of the United States irresponsibly retarded.

The membership of the House may recall that on March 13, 1956, in a speech that I delivered in this Chamber, I first called attention to this matter. My remarks on this subject at that time ap-

pear beginning on page 4117 of the CONGRESSIONAL RECORD of March 13.

In that speech I cited the fact that in the early fall of 1954 following thorough study of possible sites by the Department of the Air Force and by the interested committees of Congress, work was begun on a jet interceptor airbase at Kalkaska, Mich. The actual construction work was undertaken only after the Congress had authorized the construction and had appropriated funds for the initial expenditure of $8.6 million with respect to the Kalkaska Base.

The development of the Kalkaska Base was described by the Department of the Air Force as being in the best interest of the Air Force. The importance of immediate development of the base was further described by the Air Force as necessary to meet an urgent air defense requirement. The cost of the Kalkaska Base was estimated to be significantly less in original construction cost and substantially less in annual maintenance cost than similar costs pertaining to any other site considered.

In my remarks of March 13, I went on to relate how certain persons seeking to further their selfish interests had endeavored to have the jet interceptor base transferred from the Kalkaska area to a less satisfactory site near Manistee, Mich. I explained and documented how such a transfer would cause a minimum of 1 year's delay in the completion of a vital link in our northern defense perimeter intended to protect the north central industrial area of the United States from Detroit to Chicago. I also explained and documented the way in which the transfer from Kalkaska to Manistee would not only result in the abandonment of taxpayer's money already spent on the development of the base at Kalkaska but would also significantly increase the total cost of the development of the base. In my remarks of March 13, I also pointed out factors pertaining to troop morale considerations that dictated that the airbase be located at Kalkaska in the interest of promoting troop welfare and furthering our national security.

In my remarks of March 13 I thought that I had fully discussed the reasons why it was essential that the air base be retained at Kalkaska, Mich. and not transferred to Manistee, Mich. However, since that time certain additional matters relating to this subject have been brought to my attention. This additional information makes the motives of the self-seeking individuals endeavoring to transfer the base to Manistee, Mich. even more questionable and the propriety of the methods they have used to accomplish this end even more dubious than these motives and methods had appeared at the time of my previous speech.

The motivation for their efforts to transfer the base relates to their personal convenience and to their abhorrence of possible association with our American boys wearing the uniform of the United States Air Force. Mr. Speaker, I will have more to say on that later.

The self-appointed czar of this minority group effort to obstruct the development of an airbase at Kalkaska, Mich. that the Air Force has termed urgent to our national security, is an occasional summertime resident of the Kalkaska area who owns property in the area assessed at $3,800 in value and who paid $100.70 in taxes on that property for the year 1955. The individual heading this irresponsible obstructionist movement actually lives in St. Louis, Mo.

This $100 a year summertime taxpayer would deny to the year-around taxpayers of Kalkaska the opportunity of seeing their community prosperity enhanced by virtue of the $5.8 million payroll that would attend locating the jet base at Kalkaska. He would prefer that the community lose that multimillion dollar payroll so that his summertime peace and tranquility to which he contributes $100 a year would not be disturbed. The Department of the Air Force has expressed a view that because of community and recreational facilities that will be available to Air Force personnel, the Kalkaska site is the most desirable location considered in connection with locating the jet base in northern Michigan. This part-time resident of Kalkaska would sacrifice the morale and welfare of our military personnel for his part-time convenience.

In a letter dated October 5, 1955 which this St. Louis "constituent" sent to citizens in the Kalkaska area soliciting the donation of funds to thwart the Air Force in the development of an Air Force base essential to our national defense stated in his letter as follows:

> We have employed two lawyers in St. Louis and will shortly employ a third one in the State of Michigan.

He goes on to say with reference to the two lawyers in St. Louis:

> Both of these men know their way around Washington and are close to several influential Members of Congress.

The sinister implication of the expression in this St. Louis "constituent's" letter to the effect that the two lawyers in St. Louis are "close to several influential Members of Congress" should be carefully considered by every Member of Congress in his vote as to whether or not this vital air base should be retained at Kalkaska, Mich., as desired by the Air Force or whether it should be transferred to Manistee, Mich., as desired by a few part-time residents of the State of Michigan. I can't help but wonder why the third lawyer from Michigan that this St. Louis "constituent" proposes to hire is necessary if the two lawyers from St. Louis have the Washington influence that he claims for them. Mr. Speaker, is this another instance of a person seeking to substitute influence for merit, in endeavoring to further a cause before the Congress of the United States? I think it is, Mr. Speaker, and, therefore, I am confident that the Congress will not sustain him in his selfish purpose.

My St. Louis "constituent" recently sent to me a petition allegedly representing the alleged views of approximately 700 signatories in opposition to the location of the air base at Kalkaska. I instigated an investigation to determine the validity of that petition. I have recently received reports on that investigation in the forms of a telegram from the Honorable Merle C. Lutz, President of the Kalkaska Air Base Committee and also a sworn affidavit from the Honorable Hollis W. Morgan, President of the Kalkaska County Chamber of Commerce. Mr. Speaker, at this point in my remarks I will include the telegram and the affidavit:

TRAVERSE CITY, MICH., *March 23, 1956.*
Representative VICTOR A. KNOX,
House Office Building,
Washington, D. C.:

March 16, 690 cards addressed to signers of Comfort's petition were mailed at the post office of Traverse City, Mich., as of this date March 26 9:30 a. m., the following returns have been experienced: 94 returned—unknown, 30 returned—moved, 1 returned—deceased, 3 returned—no reason given, 37 returned—no such post office, 21 returned—insufficient address, 53 signers have indicated they are no longer opposed, 136 are still opposed to the site, 8 are undecided.

MERLE C. LUTZ,
President, Kalkaska Air Base Committee, Inc.

KALKASKA COUNTY CHAMBER OF COMMERCE,
Kalkaska, Mich., March 17, 1956.

To Whom It May Concern:

I, hereby, certify that I have conducted an investigation of the attached petition circulated in protest of the Kalkaska Jet Base in the summer of 1955 and I submit the following report:

There are 690 signatures entered on the petition of which 536 are reported here. Not one signature bares a Kalkaska address: 294 are found to be property owners, including husband and wife; 59 are year around residents (husband and wife and family); 313 are summer residents, or visitors (weekends to two months); 154 are completely unknown signatures; 9 are duplicate signatures; 1 is deceased for approximately two years; 23 minors (mostly early teenagers including two children of Hartley Comfort).

I hereby certify that the above report is true and accurate to the best of my knowleldge.

HOLLIS W. MORGAN,
President, Kalkaska County Chamber of Commerce.

Subscribed and sworn to before me a Notary Public in and for Kalkaska County on this 17th day of March 1956.

MILDRED E. SHOEMAKER,
Notary Public, Kalkaska County.
My commission expires August 16, 1959.

Mr. Speaker. these two documents are significant in that they demonstrate the deceit being used by those who would prevent the location of the jet base at Kalkaska.

Thus far, Mr. Speaker, in my remarks on this vital subject today, I have documented the facts that, First, the minority group of part-time residents in the Kalkaska area who are seeking to thwart the efforts of the Department of the Air Force to complete the vital link in the air security of our Nation have resorted to the pressures of influence, and, second, have resorted to deceitful misrepresentations, in their efforts to accomplish their purpose.

Mr. Speaker, without attempting to minimize the serious gravity of those two devious methods that have been employed by this minority group that seek the transfer of this jet base to the Manis-

tee area, there is a third factor with respect to their methods that causes me even greater concern and that must be called to the attention of my colleagues in the House.

Mr. Speaker, that third factor concerns the effort on the part of the same individual who is purchasing influence and practicing deceit to keep the Kalkaska base from being completed, to attain support for his selfish efforts by making scurrilous and opprobrious attacks upon the moral character of the men and women serving in the Armed Forces of the United States. This individual has expressed opposition to the location of the jet base at Kalkaska for the reason that "Around a military establishment unfortunately are found saloons, taverns, motels of question character, bawdy houses, and so forth." This same individual has said: "Traverse City with two bases in its area already can point to an alarming increase in delinquency. Thirty-five cases of illegitimacy, traceable to these bases is something the families do not want in the Chain of Lakes area." I have had both of these allegations carefully checked by the appropriate police officials in the Traverse City area. I have been informed in sworn affidavits from these officials that not only are these allegations untrue but the fact is that the military personnel located in the Treaverse City area have a record of rendering substantial community service to the citizens of that area.

Mr. Speaker, at this point in the RECORD I would like to include those affidavits as part of my remarks.

AFFIDAVIT

TRAVERSE CITY, MICH., *March 17, 1956.*

1. That I have been sheriff Grand Traverse County for the past 6 years, and associated with law enforcement for the past 10 years.

2. That during this period, to the best of my knowledge and belief, and especially following a thorough study of record, that the following facts are presented:

A. That there has been no above normal increase in crime, or reason to suspicion that there is, either due to the Empire Air Force Base or to the United States Coast Guard Air Station located in Traverse City.

(a) That, quite to the contrary, both of these installations have been a decided asset as assistance to law enforcement agencies, and that this assistance has been rendered to law enforcement agencies both under the official direction of commanding officers apart and separate from official duty nature, and as individuals during off-duty periods.

(b) That as examples of this assistance to law enforcement are quoted:

(1) The many assistances given in the rescue of resorters encountering trouble on the many lakes of the region.

(2) The assistance given in the finding of lost children, lost hunters, etc.

(3) The assistance given in searches for drowned bodies, and the subsequent finding of same, as a result of their efforts.

(4) The assistance rendered during large fires and other emergencies.

3. That, to the best of my knowledge and belief, there has been absolutely no increase in the rate of illegitimacy, or any related incidents or crimes, within the jurisdiction of this department.

RICHARD WEILER,
Sheriff, Grand Traverse County, Mich.

STATE OF MICHIGAN,
County of Grand Traverse:

On this 17th day of March 1956 before me, a notary public in and for said county, personally appeared Richard Weiler, known by me to be the sheriff of Grand Traverse County, Mich., and who signed and acknowledged the foregoing instrument as his free act and deed.

MADELYN E. KELSCH,
Notary Public, Grand Traverse County, Mich.

My commission expires March 25, 1956.

AFFIDAVIT

CITY OF TRAVERSE CITY, MICH.,
March 17, 1956.

This is to certify that I, Charles Woodrow, am the chief of police in the city of Traverse City and have been for the past 14 years. I have been in police work in the city of Traverse City for the past 28 years.

In a letter to Mr. Donald Quarles, Secretary of the Air Force, dated August 30, 1955, Mr. Hartley B. Comfort alleges in paragraph No. 8 of this letter: "Traverse City, with two bases in its area, already can point to an alarming increase in delinquency. Thirty-five cases of illegitimacy traceable to these bases is something the families do not want in the 'Chain of Lakes' area."

I would like to make the following statement:

That, to the best of my knowledge and belief, there has been no abnormal increase in crime, delinquency, or illegitimacy since the establishment of these bases, and that, quite on the contrary, the personnel have been extremely well behaved. We have had the utmost cooperation from both bases in the handling of what few minor problems that have come up.

CHARLES WOODROW,
Chief of Police, Traverse City, Mich.

STATE OF MICHIGAN,
County of Grand Traverse:

On this 17th day of March 1956 before me, notary public in and for said county, personally appeared Charles Woodrow, known by me to be the chief of police of the city of Traverse City, Mich., who signed and acknowledged the foregoing instrument as his free act and deed.

MADELYN E. KELSCH,
Notary Public, Grand Traverse County, Mich.

My commission expires March 25, 1956.

Mr. Speaker, neither the patriotic people of the Kalkaska area nor I as their Representative in the Congress of the United States initially sought to have the jet air base located in their lovely community. It is typical of the people in that community, however, that when they learned that the Department of the Air Force desired to build an air-base installation in their area that was vital to the defense of the United States, they immediately undertook to cooperate wholeheartedly with the Department of the Air Force in the completion of that project. The people of the community have already spent tens of thousands of dollars acquiring land to be donated to the Federal Government, enlarging school facilities, and improving recreational facilities to assure completion of the base and to assure maintenance of troop morale at a high level for the military personnel to be stationed there. The citizens of Kalkaska demonstrated in a typically American way that they wanted and would welcome the Air Force as an addition to their community.

Mr. Speaker, the Air Force also wanted Kalkaska. The reasons for the decision by the Department of the Air Force to locate at Kalkaska can best be summarized by inserting in the record at this point in my remarks excerpts from the testimony of Mr. John M. Ferry, Special Assistant for Installations of the Department of the Air Rorce before the House Armed Services Committee on March 7, 1956, in connection with that committee's consideration of H. R. 9893, authorizing construction for the military departments for fiscal year 1957.

The Air Force is satisfied with the Kalkaska site, from an operational and community viewpoint. It is the cheapest site for construction of any of those that we have surveyed. It has a great advantage in that the plans for construction are substantially completed. The land is being in the press of being acquired and donated in fee by the community and we have a lease on some 7,000 acres of State land, which we are ready to move in on. * * * It is a matter of importance that this go forward rapidly. Not only because of the need and desirability of establishing a base for our fighters as a protection to the central part of the country, but in order to establish the SAGE installation which is a part of the network of protection for the whole northern border of our country. * * *

The project of the SAGE installation is of the utmost importance. The plans are ready. We could go forward placing contracts within a matter of weeks if it wree established that the installation will go at Kalkaska. * * *

In establishing the desirability of our base at Kalkaska, we gave considerable weight to the fact that we had obtained community support. By that I mean housing, schools, churches, social centers, close to our base, which is one of the factors involved in the selection of such a thing.

* * * * *

Mr. FERRY. Without looking at my figures, sir, it is about $18 million cheaper than Cadillac, but in annual costs, which I shall bring out later, it is considerably cheaper than Cadillac because of this SAGE installation.

I would like to point out one fact which is of great importance.

Here is Torch Lake, which Mr. Comfort discussed with you today, and pointed out there are expensive properties around here, which is true.

Here is the relationship of our base to Torch Lake. You will note it is a matter of about 8 miles away.

There is the runway. The pattern will bring planes in on the east-west heading, because there are prevailing winds, which will substantially keep them away from any of the Torch Lake area, so that the possibility of annoyance from noise of these jet planes is very minimal in the Torch Lake area.

I have never been quite clear as to just what the objection to the Torch Lake residents was to this, because of the fact that it is relatively remote from their property. * * *

Under these circumstances, sir, I believe that it is in the best interests of the Air Force to expedite the construction of this property that is badly needed. We are ready to go forward with the concurrence of the committee.* * *

* * * * *

The CHAIRMAN. Then the committee can understand after Cadillac had been rejected by the Appropriations Committee you appointed a board to make further studies, and the board made its findings and conclusions and recommended Kalkaska?

Mr. FERRY. Yes, sir.

The CHAIRMAN. Did they examine Manistee?

Mr. FERRY. They examined three sites.

The CHAIRMAN. Which three sites?

Mr. FERRY. They are not identifiable geographically other than to say they are rela-

tively close together, and we titled them "Sites 1, 2, 3, in the Manistee area."

The CHAIRMAN. Compare the difference between the Kalkaska site and the Manistee site.

Mr. FERRY. May I refer to my figures to give you accurate cost information, sir?

For the purpose of your information, the cheapest Manistee site—there were three sites developed—the cheapest one was $11,850,000, as compared with the Kalkaska site, $11,652,000.

The CHAIRMAN. Now, are there any military objections to any one of the three sites?

Mr. FERRY. Yes, sir.

The CHAIRMAN. Tell us the advantage of the Kalkaska site over the Manistee site.

Mr. FERRY. The Kalkaska site is closer to a community, so that in time off that our people may have they will have a good-sized town. It is about a 20,000-inhabitant town—a good-sized town to go for such recreation as they may be able to develop.

The CHAIRMAN. As a military mission, has Kalkaska any advantage over Manistee?

Mr. FERRY. Militarily, with the exception of the fact that Manistee has a difficult soil problem in connection with the runways and foundations for the buildings. It will be difficult to expand the Manistee site in the near future.

* * * * *

The CHAIRMAN. Now, then, the other factors that caused you to make your decision, please.

Mr. FERRY. The other factors were cost, community support.

The CHAIRMAN. What is the difference in cost between the Manistee site and Kalkaska site, about $500,000?

Mr. FERRY. About $250,000. In first cost. In first cost.

The CHAIRMAN. There is no difference insofar as the cost is concerned?

Mr. FERRY. The first cost, sir. The annual costs are quite different.

The CHAIRMAN. How does the annual cost increase more at Manistee than at Kalkaska?

Mr. FERRY. The difference is brought about by the cost of the land lines which are used to connect up the SAGE installation into our defense network. The annual charges at Kalkaska are $1,040,000, as compared with $1,500,000 a year—a saving of almost a half million dollars a year in land-line costs.

Mr. DURHAM. Can you give us at this time the amount of money the Government would lose if another site were selected at this time? What are your commitments already, and how much money have you spent?

Mr. FERRY. We have between $400,000 and $500,000 already spent or committed to be spent for the development and completion of the plans and working drawings at the Kalkaska site.

Mr. DURHAM. In other words, you would lost about $500,000?

Mr. FERRY. Yes, sir.

Mr. DURHAM. Do you have a commitment already on your SAGE project and the contract?

Mr. FERRY. No, sir; and I am most anxious to place it. I am most anxious.

* * * * *

Mr. RIVERS. How much would it cost in delay if we selected another site?

Mr. FERRY. We would lose 1 year.

Mr. RIVERS. That would leave a gap in defense of this country for an additional year?

Mr. FERRY. Yes, sir.

* * * * *

Mr. WICKERSHAM. If you desire to expand in the future, can you expand at one base as easily as you can at the other?

Mr. FERRY. No, sir. We can expand more readily at the Kalkaska site than at the Manistee site because of soil conditions. We run into a rather difficult peak situation. It would be difficult to extend our runways.

* * * * *

The CHAIRMAN. You know of the various complaints coming in from cities all over the country about the noise caused by the jets. Why doesn't the Department try to locate these places that have equal military value, where there will be less objection on account of the noise? Why do you want to go into fine sections and have people worried and disturbed, when you could go to a more isolated section and have the same military defense, and put it there instead of putting it in other places?

Mr. FERRY. I am glad you have raised the question, Mr. Chairman. There are only two answers to that. In the first place, we have put it in an isolated area. We are out in an untouched wilderness, a completely untouched wilderness where we will not disturb any existing residents. There are only 3 or 4 cabins that have to be taken away from this entire area which we are about to occupy, and we are 20 miles away from the town of Traverse City—18 or 20. We are 8 miles away from the residential section which has been so clearly described here, at Torch Lake, and the pattern of our take-off and landing in the summertime is so consistently east-west, that we cannot see where it will cause the slightest major trouble to the people living at Torch Lake.

Mr. Speaker, that is the record that was before the House Armed Services Committee at the time that distinguished group adopted an amendment to H. R. 9893 that would transfer the jet base in northern Michigan from Kalkaska which was supported by the Air Force, to Manistee which was supported by a small minority group of summertime residents in the Kalkaska area.

The views of this minority group endeavoring to obstruct the Department of the Air Force in locating an airbase in Kalkaska is most persuasively offset by the testimony of the representative of the Department of the Air Force before the House Armed Services Committee. It is also persuasively offset by the views expressed by the majority of the citizens affected by the location of the base at Kalkaska. Typical of these expressions of views is a letter signed by Dr. B. B. Breese dated March 20, 1956, addressed to the House Armed Services Committee. At this point in my remarks I will include Dr. Breese's letter:

ROCHESTER, N. Y., *March 20, 1956.*

HOUSE ARMED SERVICES COMMITTEE,
House of Representatives,
Washington, D. C.

GENTLEMEN: I have just learned of the decision of your committee to change the jet base location in northern Michigan from Kalkaska. Although I know that your time is precious, as a summer resident of Torch Lake, I should like to express my protest.

I have always considered Hartley Comfort, who has been instrumental in making this change, as a friend and I still do. However, I believe that many of the summer residents, even thought they originally signed the petition which he presented to you have changed their views and would favor the base if they knew.

1. That from a defense, and taxation standpoint the Kalkaska area was advisable.

2. That money spent to prepare the site for use was wasted if the base were moved.

3. That the local residents would welcome the base and its personnel.

Apparently all three of these questions can be answered in the affirmative.

I know that I express the sentiment of a large group of resort people, many of whom have told me that that is the case.

My guess would be that if a secret ballot were permitted and the decision were based on the sentiment of the total local and summer resident population that those who favor the base would win. This, however, is not a problem for a referendum.

Although I am in no position to dictate your decision from a national standpoint, the question would seem to be:

Where can the needed base be most effectively and cheaply installed?

If Kalkaska is that spot, feel assured that by and large the base will be welcome.

Very sincerely yours,

B. B. BREESE, M. D.

There has recently appeared in the newspapers in the Kalkaska area a full page ad paid for by public-spirited citizens in the community who have recognized the economic and military need for the location of the airbase at Kalkaska. Because the contents of this ad clearly demonstrate the true feeling of the people in the area with respect to the location of the jet base near their community, I will, Mr. Speaker, include the text as part of my remarks at this point:

AN OUTRAGEOUS DECISION

There is widespread outrage among local residents at the decision of the Armed Services Committee to shift the location of the jet base from Kalkaska to Manistee.

Much of this feeling, too, is directed at one summer resident who, regardless of whether he intended to or not, has in reality put his interests ahead of those who live here year around, as well as ahead of our Nation's defense.

An annual payroll of about $6 million has been thrown away because of an unproved and dubious claim that the jet base would hurt the resort business, and also partly because of a false implication that we who live here don't want it.

Obviously the resorter in question has no concept of the economic problems facing the 10,000 or so year-around residents in Antrim County. He apparently thinks that the largess from the golden egg of a 2-month summer resort business is all—absolutely all—that this area should expect, and all that it needs, to continue living at its usual substandard level.

Fine schools, job and business opportunities, good housing, adequate loan institutions, improved sanitation, well-equipped hospitals close at hand, and many other cultural and economic advantages—all these have apparently been taken for granted by he who lives in the midst of them in the more prosperous area below. For us, these things are still a hope for the future that can only be fulfilled as our economy develops.

The tragedy is that there has been no convincing proof that the jet base and the resort business in this instance cannot be compatible. The Kalkaska site is in wasteland, far enough from the populated lakes region, and the flight patterns from this base were not planned for over the Torch Lake area.

The belief that the air base and our resort enterprise can exist side by site mutually benefiting each other is what has accounted for the silence of most local residents on the jet base issue before this.

Most of them felt that there was no use having an unpleasant argument when it seemed that the base was assured anyway.

Most of them felt that it was a healthy thing for those in opposition to express their opinions along with those who were in favor of it. That's democracy.

But the fact is that the House Armed Services Committee has apparently come to be-

lieve the story told it by the summer resorter, who came armed with a 1,200-name petition.

The House Armed Services Committee apparently believes that we are all "up in arms" about the base and don't want it here. What a libel of this area?

The loss of the jet base is not just a loss for those who live here. It's a terrible waste of both time and money for the entire Nation—because, for the most part, of the aggressive and successful action of one man working determinedly to keep the base out of Kalkaska and possibly out of Michigan.

According to news reports, the 1,200-name petition is the weapon that did it—and yet we know how phony petitions can be. We're not saying there's anything wrong with the petition that was presented. No one has had a chance to investigate it yet. But we cannot believe that most of those who signed it wanted it to be interpreted as a mandate for a reactionary treatment of national defense and the welfare of this area.

After all, a great measure of the enjoyment that summer residents have in any resort community depends upon and grows out of the friendly relationships with local residents.

What happens to the pleasure of such a relationship if there is no equality or dignity in it?

Each social group has a right and duty to help the other understand its individual and mutual problems. Discussion, persuasion, education—all are the accepted techniques of making a better society for free men.

But no one person, or small group of individuals, has the right to virtually dictate how this area shall grow, how it shall be developed, or attempt to place a ceiling over it—not without the consent of those living here. That is the basic reason for the outrage at the jet base decision.

We are sure that neither the summer residents nor the local residents are going to let the jet base affect their friendly relationship for the future, but we are also sure this issue is not dead yet.

If you want to help, whether local or summer resident, let the Armed Services Committees of the House and Senate know how you feel.

Let them know that you are disgusted with the waste of taxpayers money running into millions of dollars that would result from such a change.

Let them know that you believe that soldiers and citizens can live together in harmony in America.

Let them know that you believe that our real enemies are abroad and not at home.

Let them know that you want a reversal of the outrageons decision recently made by the House Armed Services Committee.

But act by sending a wire, telephoning, or writing your Congressman now, or it may be too late. (This appeal paid for by local citizens and businessmen interested in the continued economic and cultural development of this area.)

Thus, Mr. Speaker, we have a record of the Department of the Air Force undertaking to establish a vital defense link in the northern perimeter of the United States at a site which was desirable in terms of strategic and military considerations and which would result in the lowest possible cost to the American taxpayer, a record of the American citizens in the community working with the Department of the Air Force in a spirit of patriotism and cooperation. Unfortunately, Mr. Speaker, we also have a record of a small group of persons who had some tenuous claim to residency in the area using influence, deceit, and unwarranted attacks on the character of the men and women wearing the uniforms of the Armed Forces of the United States in order to obstruct the development of this airbase at Kalkaska.

Mr. Speaker, we also have at issue in this matter a question of the confidence and faith that the people of America may place in their Federal Government and more particularly in the Congress of the United States. In my remarks today and in my remarks on March 13 I carefully documented the reliance that the people of Kalkaska placed on the decision to locate the jet base in their community. The Department of the Air Force and the citizens of Kalkaska were fully justified in proceeding with their cooperative effort to bring to a prompt conclusion the construction of this essential Air Force establishment. In this connection, Mr. Speaker, it is appropriate to note that the actions taken in this regard followed the approval of the House and Senate Committees on Armed Services and the House and Senate Committees on Appropriations. This concurrence is documented by correspondence addressed to Defense Department officials from the appropriate committee and subcommittee chairmen expressing congressional approval of the selection of the Kalkaska site. Mr. Speaker, at this point in my remarks I will include copies of those letters:

HOUSE OF REPRESENTATIVES,
COMMITTEE ON ARMED SERVICES,
July 29, 1955.

Hon. LYLE S. GARLOCK,
Assistant Secretary of the Air Force,
Department of the Air Force,
Washington, D. C.

DEAR MR. GARLOCK: I have your letter of July 28, 1955, in which you indicate that it is the intention of the Air Force to establish the Traverse City area base at Kalkaska, Mich.

I am gratified that final selection of this base has been made, since I know of its importance to our Air Defense Command.

You request that this committee give its approval for the development of the airbase at the Kalkaska site. This request is somewhat of a surprise to me, since I assume that the site selected is in the Traverse City area and, this being so, this committee has no further function to perform or approval to give. The only remaining matter which would come within the cognizance of this committee would be the acquisition of the land necessary for the base, and I would expect that a project covering this land acquisition will in time be submitted to the committee.

Sincerely yours,

CARL VINSON,
Chairman.

HOUSE OF REPRESENTATIVES,
COMMITTEE ON APPROPRIATIONS,
July 28, 1955.

Hon. HAROLD E. TALBOTT,
Secretary of the Air Force,
Washington, D. C.

DEAR MR. SECRETARY: This committee has no objection to the Air Force proceeding with the immediate construction of an airbase at the so-called Kalkaska site in Michigan as requested in Mr. Garlock's letter of July 28, 1955. It should be understood that funds can be made available from the appropriation for "Military construction, Air Force," in the amount previously justified and appropriated for an airbase in the Traverse City area.

Sincerely,

CLARENCE CANNON,
Chairman.

UNITED STATES SENATE,
COMMITTEE ON ARMED SERVICES,
August 11, 1955.

Hon. LYLE S. GARLOCK,
Assistant Secretary of the Air Force,
Financial Management, Washington, D. C.

DEAR MR. SECRETARY: Chairman RUSSELL has referred to the Subcommittee on Real Estate and Military Construction your letter of July 28, 1955, regarding the development of a new airbase in the Traverse City, Mich., area.

As you know, the authorization for this base is designated as "Traverse City area, Michigan." It appears that this authorization is broad enough to support a location at any of the sites mentioned in your letter. The Senate Armed Services Committee was not responsible for the two previous changes in the proposed location of this base and, thus, has not had an opportunity fully to evaluate the comparative merits of the proposed sites. Since under the terms of the authorization act no further action is required on the part of the committees that considered the authorizing legislation, the Senate Armed Services Committee does not desire to impose any further restrictions on the Air Force in its selection of the site that is most advantageous to the Government.

Sincerely yours,

JOHN STENNIS,
Chairman, Subcommittee on Real Estate and Military Construction.

UNITED STATES SENATE,
COMMITTEE ON APPROPRIATIONS,
August 4, 1955.

The Honorable CHARLES E. WILSON,
Secretary of Defense,
Department of Defense,
Washington, D. C.

MY DEAR MR. SECRETARY: The Senate Appropriations Committee has this day approved reprograming requests of the Departments of the Army and Air Force for military construction items as submitted and testified to by the Departments concerned.

The enclosed lists marked "Pending Construction Requests" and dated July 28, 1955, indicate the 3 Army projects and the 13 Air Force projects considered and approved.

In addition, the Committee has approved the development of the Kalkaska, Mich., Air Force Base, for which funds have been previously appropriated for a similar project in this area.

Very sincerely yours,

CARL HAYDEN.

Mr. Speaker, the membership of this distinguished body will soon be called upon to exercise its considered judgment on an amendment that I shall offer at the time H. R. 9893 is being considered in the United States House of Representatives. My amendment will provide for the continuation of the jet airbase at Kalkaska in the interest of military and defense economy. My amendment is supported by the Department of the Air Force. My amendment is supported by the vast majority of the citizens residing, part-time and full-time, in the Kalkaska area. My amendment is supported by the urgency of military considerations and the dictates of sound Federal economy. It is my hope, Mr. Speaker, that my colleagues in the House will undertake to join me in this effort to achieve greater national security for our glorious country at less cost to our already overburdened taxpayers.

Poll of Country Editors Shows Great Opposition To Return to Rigid Price Supports

EXTENSION OF REMARKS
OF

HON. ELFORD A. CEDERBERG
OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 9, 1956

Mr. CEDERBERG. Mr. Speaker, I have always felt that our rural editors were very close to grassroot sentiment and maintained about as close a feel of public opinion as any other group of people. Recently the editors of the American Press, the monthly publication of the American Press Association polled its member editors on a number of farm questions.

The replies indicate that these rural editors feel the Secretary of Agriculture is doing a good job and that the consensus is that we should continue President Eisenhower's flexible price-support program or eliminate price supports entirely.

Because the poll is so pertinent to farm legislation now before us, I submit, with permission of the editors, that magazine's article on the poll:

DON'T RETURN TO RIGID PRICE SUPPORTS FOR FARMERS, COUNTRY EDITORS WARN

"Continue Eisenhower's flexible price support program, or eliminate price supports all together—but don't return to the rigid price support for farmers. * * *

"Try out the soil bank idea. * * *

"Repeal restrictions on sale of surplus farm products to Iron Curtain countries. * * *

"Exempt farmers from the Federal gasoline tax."

That is the consensus of opinions of the country editors of the Nation on the farm program, as revealed by a poll just completed by the American press, based on replies received from 653 editors from all sections of the United States.

The poll also showed majority approval of the job being done by the Secretary of Agriculture.

Conducted while discussion of the farm program was at its height, the American press poll not only asked editors to give their opinion on various proposals, but also asked for their estimate of the opinions of their readers. This second part of the survey showed considerable difference between the opinions of the editors and of their readers.

Whereas only 18 percent of editors favored a return to rigid price supports, for example, 45 percent thought their readers favored the idea of going back to the old support system. And where 61 percent of the editors approved the job being done by Secretary Benson, only 31 percent thought their readers approved of his work.

The survey revealed strong opposition among editors to the whole price-support idea. Many who voted for the flexible supports emphasized that they should gradually be reduced and the Government should aim at getting rid of all supports as rapidly as possible.

Many of the editors felt that price supports were simply being used by politicians to get votes and stated their belief that the idea is un-American, that the farmer should stand on his own feet like any other businessman, and that there is no more reason to give handouts to farmers than to newspaper publishers.

Sentiment in favor of the soil-bank idea was mind—many of the editors feeling that it is perhaps the only way out but not a sound answer to the basic problem of the farmer.

A good many editors who thought some kinds of supports were necessary felt they should be restricted to small farms—or include ceilings on the amount paid out—in order to help out the family type farmer who is having a difficult time but to avoid aiding the factory-type large farm which, they believe, is well able to take care of itself and which should be discouraged from adding to our surpluses of farm products.

Response to the poll was the greatest of any conducted by the American press so far, indicating a high degree of interest in and knowledge of the farm problem among the country editors. Almost 50 percent of those who received the questionnaire answered it in detail, many making extensive comments on the subjects covered.

Many suggestions were made by the editors for helping to solve the farm problem, ranging from the suggestion that we adopt the plan, explained in the Bible, of a food bank such as was set up by Joseph in Egypt, to the idea that instead of worrying about getting rid of surplus products we center our attention on doing away with surplus farmers, and find jobs for them in industry.

Many other suggestions and views on the general situation are included in the comments published in this issue. A summary of the questions and answers to the poll, broken down by geographic areas, follow:

1. (a) The soil-bank plan, proposed by President Eisenhower, to help deal with the problem of farm surpluses, calls for the Government to pay farmers a yearly rental for each acre of land taken out of production. Are you for or against such a plan?

[Percent]

	Northeast	South	North Central	West	Total
For	47	51	63	52	56
Against	51	47	34	48	41
No answer	2	2	3	0	3

1. (b) How do you think the majority of your readers would vote on this question?

[Percent]

One Hundred and Thirty-fifth Anniversary of Greek Independence Day

EXTENSION OF REMARKS
OF
HON. JOHN MARSHALL BUTLER
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Monday, April 9, 1956

Mr. BUTLER. Mr. President, March 25 was the 135th anniversary of Greek independence. Certainly there is no nation held in higher esteem by the people of America than Greece with its ageless culture and long heritage of freedom and independence. I ask unanimous consent that a statement prepared by me commemorating the anniversary of the independence of this noble country be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

ONE HUNDRED AND THIRTY-FIFTH ANNIVERSARY OF GREEK INDEPENDENCE DAY

One hundred and thirty-five years ago, on March 25, 1821, the Greeks rose against the Ottoman empire, under the leadership of their beloved Archbishop, Germanos of Patros, and commenced their struggle for freedom and independence. For more than a decade they fought heroically against their oppressors, and ultimately, on May 7, 1883, the Convention of London recognized Greece as an independent nation.

From that day, the Greeks have tenaciously retained their hard-earned independence. However, it has not been an easy task for they have constantly had to resist the predatory designs of their neighbors.

Recent tangible evidence of their determination to preserve their independence can be seen in their struggles against the Nazis is World War II, and even more recently in their battle against the Communists. Their indomitable stand against these totalitarian oppressors has amazed the world. Despite almost insurmountable odds the Greeks have never relinquished their cherished freedom.

In their struggle against Communist tyranny, the Greeks were aided by the United States. We realized that the Greeks' battle against Red infiltration of their country was actually a strife against the spread of communism beyond the Greek borders and a conflict for free world security.

The Greeks' eventual triumph was also a victory for America for it permitted the United States to win the first major contest in the cold war launched by the Kremlin. Furthermore, it served as a source of inspiration for all enslaved people who were suffering under Soviet despotism.

Although victory was attained and freedom secured, the Greeks have not relaxed their vigilance. They are ever conscious of the threat of communism and with the help of United States economic and military aid they have strengthened their economy and armed forces as a safeguard against future aggression. The fact that Greece has been included in the North Atlantic Treaty Organization is indicative of their ability to share responsibility in the struggle against Soviet expansion.

The occasion of the celebration of Greek independence is always an auspicious time to emphasize the cultural contributions that the Greeks have bequeathed to civilization in the field of philosophy, science, art, and literature. On this 135th anniversary it is also fitting to emphasize the debt that America and all the free world owes the courageous Greek people for their valiant stand against communism. People of Greece, we congratulate you on this important day, and pray that the strong bonds of friendship between our nations will remain, and grow even stronger during the years to come.

Construction of Transmission Lines by the New York State Power Authority

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, April 9, 1956

Mr. LEHMAN. Mr. President, Some weeks ago, on February 23, Gov. Averell Harriman sent to the New York State Legislature a message proposing amendment of the New York Power Authority Act so that the State Authority would clearly have the right to build transmission lines when required to carry out the purposes of the law. Governor Harriman sent a very incisive message to the legislature in support of this proposition. Unfortunately, the proposal was not acted on by the State legislature.

Nevertheless, the fact that Governor Harriman transmitted such a suggestion is a most significant development. The reasons advanced by the Governor for this amendment are, in my judgment, unexceptionable.

I ask unanimous consent that the fine message addressed by the Governor of New York to the New York State Legislature on this subject be printed in the Appendix of the RECORD.

There being no objection, the message was ordered to be printed in the RECORD, as follows:

STATE OF NEW YORK,
EXECUTIVE CHAMBER,
Albany, February 23, 1956.

To the Legislature:

One of the great values of the St. Lawrence power project—and one of the reasons why the people of the State decided in favor of public rather than private development of those resources—is to provide a yardstick for reasonable electricity rates to the consumer. In our free-enterprise system, we rely on the forces of competition to assure the consumer an ample output of goods or services at the minimum price. In the field of electric power the equivalent of competition can best be brought about through the public yardstick. Experience elsewhere in the country has shown the effectiveness of such a yardstick in providing an incentive for private companies to decrease their rates and expand their services—bringing benefits to consumers and investors alike.

It is clear from the State Power Authority Act as a whole that the legislature intended that such public yardstick operations be established, but the language as it stands has shortcomings and omissions that need to be corrected.

In the first place, as I mentioned in my annual message, it needs to be made entirely clear that the authority can erect transmission lines.

In the second place, the provision for preference to public distributing bodies has been challenged and, to avoid litigation, needs to be clarified. Moreover, the provision should be extended to cover rural cooperatives.

The concept of public preference has been in every Federal enactment relating to river development and hydroelectric power for half a century—since the first Reclamation Act in 1906, and including the Flood Control Act of 1944. The same provision is in the Lehman bill for development of the Niagara, which I hope will be enacted at this session of the Congress.

With the passage of the Rural Electrification Act in 1935, rural cooperatives have properly been given the same priority status in Federal legislation as that accorded to other nonprofit distribution systems, owned by municipalities and other public bodies. But the rural cooperatives are not included in the preference clauses of our State law.

The electricity requirements of New York's rural cooperatives, although relatively small, will increase steadily, and it is important to their growth that their power supply be assured from public sources rather than leaving them dependent upon private companies whose interests are often opposed to those of the rural cooperatives. Some of the smaller municipal systems which do not have their own generating plants need the same protection.

I recommend that your honorable bodies enact legislation at this session which will enable the power authority to construct transmission lines and to require the authority in its sale of power to give preference to State agencies, municipalities, and other subdivisions of the State and to rural electric cooperatives.

AVERELL HARRIMAN.

Public Supports Postal Rate Increase, Poll Indicates

EXTENSION OF REMARKS
OF
HON. ELFORD A. CEDERBERG
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 9, 1956

Mr. CEDERBERG. Mr. Speaker, further indication of the general public support of the request of the Postmaster General for an increase in postal rates shows up in a poll conducted in the State of Minnesota by the Minneapolis Tribune.

That poll shows that 70 percent of the people interviewed felt the Post Office Department should at least break even and 49 percent felt rates should be increased while 5 percent had no opinion on rates and 7 percent had a qualified view.

The newspaper article on the results of the poll follows:

[From the Minneapolis Tribune of March 18, 1956]

MINNESOTA POLL—49 PERCENT SUPPORT, 39 PERCENT OPPOSE INCREASE IN UNITED STATES MAIL RATES

Should Congress increase postal rates?

Postmaster General Arthur E. Summerfield thinks so. He has asked Congress to approve a series of increases. The money is needed, he said, to carry out a building and modernization program throughout the United States Post Office system.

Minnesotans are inclined to support his request. A survey by the Minneapolis Tribune's Minnesota poll shows more men and women throughout the State are in favor of his proposal than are against it.

Summerfield's recommendations include:

A boost from 3 to 4 cents in the postage needed for letters (first-class mail).

A boost from 6 to 7 cents in the postage for airmail.

A 30-percent increase—spread over 2 years—in the rates for second-class mail, including books, magazines, and newspapers.

A 29-percent increase in the rates for advertising material and other third-class mail.

The Post Office Department operates at a deficit of about a half-billion dollars a year. The proposed increases would reduce but not eliminate the annual losses.

In the Minnesota poll survey, interviewers questioned a representative cross-section of men and women, aged 21 and older, in all parts of the State.

They asked first:

"Do you think the United States Post Office Department should make money, break even, or expect to operate at a loss?"

The replies:

[In percent]

	All adults	Men	Women
Should make money	24	23	25
Should break even	70	71	69
Should expect to operate at loss	4	4	3
Other answers	(1)		1
No opinion	2	2	2
Total	100	100	100

[1] Less than 1 percent.

Interviewers then asked:

"The postmaster general thinks mail rates should be raised—for example, from 3 cents to 4 on first-class letters, and from 6 cents to 7 on airmail. He says higher rates for first-, second- and third-class mail will cut down operating losses.

"Do you think Congress should or should not raise the postal rates?"

The answers:

[In percent]

	All adults	Men	Women
Should raise	49	58	40
Should not	39	31	47
Qualified	7	8	6
No opinion	5	3	7
Total	100	100	100

These are the kinds of qualified answers recorded: Rates should be raised if the Department is losing money; rates should be raised on second- and third-class mail but not on letters; politicians should be charged for their mail; airmail rates should be raised but not others; raise only the class of mail that does not meet expenses.

While city and town residents interviewed are in favor of the proposal, farmers are fairly evenly divided.

Almost 3 out of 5 (58 percent) of the college-educated men and women believe postal rates should be increased.

"You pay for it, directly or indirectly, anyway," a Hinckley man said.

"A private enterprise could operate the Post Office and make money on the present rates, but the Government does not operate as efficiently," said a Duluth man who favors the rate boost.

But an International Falls man thinks "the rates are too high now," a Roseau woman believes rates should be raised just "on advertising and such," and a Dawson woman says that if rates are increased, "the people probably would not send as much mail."

Address by Hon. Edward Martin, of Pennsylvania, Before Port of Philadelphia Maritime Society

EXTENSION OF REMARKS

OF

HON. JOHN MARSHALL BUTLER

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Monday, April 9, 1956

Mr. BUTLER. Mr. President, over this Nation's long history, few Americans have made a more important contribution to the discussion of vital problems affecting security and other phases of our country's welfare than has the senior Senator from Pennsylvania [Mr. MARTIN]. His lengthy services in various capacities, affording experience which enables him to evaluate present-day developments, combine to make him an authority on questions which now challenge countrywide attention.

On March 22, in Philadelphia, the Senator from Pennsylvania delivered a most impressive address before the Port of Philadelphia Maritime Society. For the reasons I have stated, I ask unanimous consent that the text of his address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY UNITED STATES SENATOR EDWARD MARTIN, OF PENNSYLVANIA, AT THE ANNUAL DINNER OF THE PORT OF PHILADELPHIA MARITIME SOCIETY IN THE BELLEVUE-STRATFORD HOTEL, PHILADELPHIA, MARCH 22, 1956

It is an honor and a sincere pleasure to be here tonight with the maritime leadership of the Delaware River ports.

I am happy to be here because your organization is taking such an active and vigorous part in building the economic and defensive strength of the United States.

The tremendous industrial expansion that has taken place here in the Delaware Valley is one of the dominant forces in the march of American progress.

It is one of the most spectacular industrial developments of our time.

It is evidence that we have not yet begun to realize the heights of achievement that can be attained under the American system of free enterprise.

Our Nation is growing by leaps and bounds. One of the most spectacular developments has been the surprising increase in our population. We are now a Nation of more than 165 million people. We did not expect to reach that number for many years to come. It represents an increase of more than 13 million, or nearly 9 percent, above the last general census of 1950. Since 1940 the population increase has been 25 percent.

Translated into terms of human needs this population increase has imposed upon us many great problems—and one of the most important of these problems is the increased volume of transportation required to meet the needs of an expanding national economy.

For many years I have been deeply interested in transportation, from the military standpoint as well as the needs of commerce and industry.

As a member of the Senate Committee on Public Works I have given a great deal of attention to every form of transportation—highways, railroads, airlines, pipelines, and the great volume of traffic generated by foreign and domestic commerce on our rivers and harbors.

One thing stands out clearly. There is not enough railroad equipment and not enough highway capacity in our country to carry the heavy freight of our commerce and industry. We can never build enough railroads or highways to do the job of transportation as economically as it can be done by water.

The only way we can meet our growing needs for the bulk transportation of raw materials and finished products at low cost is by the improvement of waterways all over the country.

Perhaps some of the funds now going abroad to buy unwilling or questionable friendship might be diverted to more profitable purposes if applied to river-and-harbor improvements.

We need a steady stream of strategic ores and other raw materials that are vital to national defense.

We need more ships flying the American flag. We need better, deeper and wider ports, modern inland waterway facilities, and river channels of sufficient depth to accommodate the largest vessels for economical operation.

From its earliest days Pennsylvania has recognized the importance of its waterways. We are fortunate to have within the borders of our Commonwealth three great ports that give access to sealanes of the world.

Here along the Delaware River the highly developed ports of Pennsylvania, New Jersey, and Delaware serve one of the greatest concentrations of industry in the world.

At Pittsburgh the Monongahela and the Allegheny Rivers join to form the mighty Ohio, giving access to the Mississippi waterways and the Gulf of Mexico. These vital waterways carry millions of tons of freight to and from the greatly diversified industries that line their banks.

The splendid harbor at Erie is one of the busy ports of the Great Lakes.

In my support of river and harbor improvements I have not been restricted to projects that would benefit Pennsylvania alone. I have always regarded the national interest as paramount, and for that reason—because I know it is of vital importance to the whole Nation—I have given every possible assistance in the fight for a deepwater channel in the Delaware River.

I cannot allow this occasion to pass without expressing the highest praise for the hard work that has been put into this fight by members of your organization as well as other representatives of the civic, commercial, and maritime interests of the Delaware Valley. I have the highest admiration for such men as Harry Schad, Colonel LaBrum, Walter Miller, Joe Costello, Alex Crothers, and many others I could mention. They have carried on the fight with unfailing courage and vigor and in the finest spirit of cooperation.

Our sincere thanks should be extended also to my distinguished colleagues from Pennsylvania, New Jersey, and Delaware who have put aside all political differences and have battled for the Delaware River in the United States Senate and the House of Representatives.

It has been a real privilege to be associated with them in the effort to expand the usefulness of the Delaware River to its full capacity as an international highway for commerce and trade with the world.

All share in the credit for the gains we have made, but we must face the fact that final victory is not yet in sight. Much remains to be done.

We must clear away the fog of misconception and misrepresentation that has been allowed to cloud the issue. We must sweep away the misleading arguments that have been advanced by those who oppose the 40-

foot channel in the upper Delaware for selfish reasons.

We must continue with increased vigor our fight to uphold the traditional American concept that navigation improvements for the promotion of commerce are the function and responsibility of the Federal Government.

This policy has been adhered to since the beginnings of our existence as a Nation. It is the foundation upon which was built the great foreign and domestic commerce which had such an important part in our economic growth.

The Founding Fathers were wise and farseeing when they wrote into the Constitution of the United States the provision that vests in the Federal Government the responsibility for commerce and navigation.

Let us see how this policy is applied today. There are under construction in the United States at present 79 navigational projects under the jurisdiction of the United States Army Corps of Engineers.

The total estimated cost of these projects is in excess of one billion dollars. To carry them forward there is an allocation of $100 million in the 1957 budget. And let me tell you that in no major project of all those now under construction have private interests been asked to share the cost.

A few weeks ago the Senate Public Works Committee approved legislation authorizing two major navigation projects. The Committee, after hearing lengthy testimony, decided that these projects would be highly beneficial to the areas in which they are located and would contribute to the economic welfare of the Nation.

One bill provides for deepening the Great Lakes connecting channels at an estimated cost of $110 million. The other calls for the construction of a new Mississippi River outlet from New Orleans to the Gulf of Mexico at an estimated cost of $88 million. I voted to report them out favorably and let me point out that in neither case was there any recommendation—or even the slightest suggestion from the Corps of Engineers or from the Budget Bureau—that would require a cash contribution from local interests to pay part of the construction costs.

When the legislation authorizing a 40-foot channel depth in the upper Delaware was before our committee the proposal for a local contribution was carefully and thoroughly considered.

As you know, it was rejected as unsound and inconsistent with the national policy which has been followed for many years on navigation projects throughout the country.

In fighting to sustain that policy we are upholding a fundamental principle of the American system of government.

We are supporting the constitutional plan of checks and balances which specifically defines and restricts the functions of the three branches of government, legislative, executive, and judicial.

Under that plan the power to legislate is placed exclusively under the jurisdiction of Congress.

It is, therefore, proper to question the right of the Budget Bureau to encroach upon the legislative function and to usurp the power of Congress.

In the case of the Delaware River the Budget Bureau is not only invading the field of legislation but is actually attempting to defy the will of Congress as expressed in the authorization enacted in the last session.

When Congress rejected the Budget Bureau's philosophy that from some private but not clearly defined source, there should be paid the sum of $18 million, that should have cleared the way for an appropriation to get the job started.

But as I said before, we still have a fight on our hands. We must renew the attack with increased vigor.

We may encounter difficult obstacles, but I am confident that we will win in the end. No barrier to progress has long resisted determined and aggressive attack by civic-minded men who are fighting to advance the prosperity of their fellow citizens.

When I look at the figures showing the tremendous increase in the business of the Delaware River ports in Pennsylvania, New Jersey, and Delaware, I can readily understand your pride in this great natural asset.

No major port of the United States can match the record of progress achieved on the Delaware.

I think our cause would be greatly aided if the whole country could be told what we have here along Delaware River.

Even in the Philadelphia area many of our citizens are unaware that here is the largest fresh-water port in the world.

Here we have the Nations' leading import port, handling almost one-fourth of all the incoming foreign cargo of the United States. In 1955 some 34,600,000 tons of imports were unloaded here, a gain of 14 percent over 1954.

Here on the Delaware River we have the No. 1 ore port of the Nation. Every day an ore boat arrives bringing an average of 7,000 tons of iron ore to feed the furnaces of the biggest steel plant on the Atlantic seaboard.

Here we have the largest oil-refining center east of the Mississippi and the second largest in the world. Recently plans were announced for the construction of a new refinery on the Delaware River that will cost $100 million.

Here on the Delaware River the American Navy was born and the first navy yard established nearly 150 years ago. Today the Philadelphia Naval Base is one of the most important naval centers in the world and includes the largest shipbuilding yard in the world.

In 1955 the total waterborne commerce of the Delaware River ports achieved an all-time high of over 85 million short tons of cargo. This compares with 57 million tons in 1948, an increase of almost 50 percent.

These facts are well known to you, but they are worth repeating because they are positive proof that Delaware Valley, United States of America, is going ahead, and that its continued growth and expansion depends upon a deep-water channel from the upper reaches of the Delaware to the sea.

The only obstacle to industrial development that will pay big dividends in economic progress is the lack of deep water in the upper river.

It is no longer a question of whether we can afford to spend the money needed for a 40-foot channel. The real question is whether we can afford not to make an investment that will add to the wealth of the United States and increase the defensive strength of the American Republic.

Farm Legislation—Radio Broadcasts From Farmers Union Grain Terminal Association

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, April 9, 1956

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the texts of broadcasts dated March 29 and March 30, 1956, from the Farmers Union Grain Terminal Association of St. Paul, Minn.

There being no objection, the broadcast texts were ordered to be printed in the RECORD, as follows:

THURSDAY, MARCH 29, 1956.

In the past few months, as everybody knows, many farm bills have gone into the legislative hopper in Washington. In fact, there were about a hundred amendments offered to the 1956 farm bill in the course of the Senate's recent debate. One of these many bills caught our eye not for what it proposed in the way of a farm program—actually it was quite similar to many others—but rather for whom it said it was offering help.

A footnote to the bill stated that the program offered was "designated not simply to help the farmer, but also to help the banker, storekeeper, farm-implement dealer, and all other businessmen who are dependent upon the buying power of the farmer." And, that's so true—but so often overlooked. Big city newspapers and magazines blast away at farm legislation and never heed the obvious fact that businesses up and down Main Street in the towns and cities of the Nation have a lot of stake, too, in getting a sound, prosperous agriculture.

Farm legislation isn't just to help farmers—its benefits spread out to help business and industry that looks to the buying power of farmers for markets. The corner grocery store, the bank, the implement shop—all these are as much a part of farming as is the silo, the barn, the granary.

Now here is a specific example, and a true story, of how the slump in agriculture has hurt business in one typical North Dakota city. In 1954 the town had six implement dealers. One bowed out at the end of 1954. Another failed last year. And a third is now reported on the verge of bankruptcy. Only one other town in the county has implement dealers now. They'ce fallen by the wayside in other communities, too.

A resident in this city we're talking about writes us that an oil dealer there was recently refused delivery of fuel oil, and hasn't been able to pay his help regularly. Oil companies, he says, have a large number of unpaid accounts from last year. Cafes have been hit, too. A couple of them have closed up in recent months. That's the story of what declining farm income has been doing to one typical city dependent on farm-buying power.

What's happened there serves to remind us of the stake that business has in prospering agriculture, and why a sound farm program isn't just for farmers. No one ought to know that better than the Main Street businessman here in the upper Midwest. It means that Main Street ought to be mighty concerned by the GTA farm survey findings—an intimate study of the income and expenses of over 4,300 farm familes in the Midwest. The survey shows a great potential market for business if farmers had the money to buy the goods and services they need. It shows why business ought to be out in front, working right along with the farmers to get farm prices back up to where farmers can get a decent income and become good customers again.

This broadcast comes to you from GTA, the co-op way, your regional grain marketing cooperative.

FRIDAY, MARCH 30, 1956.

John Andrews was a pioneer—a farm pioneer, a co-op pioneer, and a pioneer in the spiritual and moral values that make the Midwest a solid rock in the foundations of America. He was a pioneer with a pen.

John was born in 1875, in Ireland. With his father, a Scotch Presbyterian minister,

he came to North Dakota. For nearly a quarter of a century, he was owner-editor of the Lidgerwood Broadaxe, a newspaper that lived up to its name. His career was colorful. In his last years, he worked for GTA—for the farmers. He died in 1948, while on a visit to Jamestown. John Andrew's belief in humanity was second only to his belief in God. He was a true believer, and when he took pen in hand to put his beliefs on paper, they were a joy to read. On this Good Friday, we'd like to read to you an Easter message written by John Andrews. It appeared in the April 1947 GTA Digest. He wrote:

"Long before the Carpenter's Son rose from the dead and came out of the cave-like grave of the rich man, there had been celebration of the advent of spring. The Easter which we recognize as a sacred occasion was, before the miracle of the resurrection, a day devoted to the pagan goddess, Eastre, who presided in the world's welcome to a returning spring and its assurance of food.

"There was no ever-normal granaries then, and it may be said that humanity lived from hand to mouth. Hence spring was welcome because of its promise.

"We are not very far ahead of those who in pagan times were anxious for spring's promise of food. Nations ravaged by war and famine learned that 10 short years ago. As the generations before them, they saw in Easter the hope of better and more food from their ravaged fields. To them the religious implications of the Risen Lord had an added meaning. Those circumstances may yet return to be with us again.

"It is pertinent, therefore, to turn to a consideration of the 'Hope that springs eternal in the human heart.' St. Paul, in his first letter to the people of Corinth, wrote: 'Now bideth these three, faith, hope and love, but the greatest of these is love.'

"Faith comes first. Man must believe something or in some set of principles. With that fixed in his mind, hope comes—for better days, for peace and prosperity, for justice and mercy. Easter brings him the greatest—love of his fellow man. The order is: "Love your enemies and do good to them that despitefully use you." It is a large order and one that only a few can fill. Then hope comes in. It sustains man in his effort to fulfill the order, and though he fail, time after time, the effort he makes strengthens and elevates him.

"That is the value of Easter. It carries the hope, born of faith, that love will rule the world. For, if spring brings hope of a reviving nature with a weeping April, it is only as the Psalmist saw it: 'Weeping may tarry for the night, but joy cometh in the morning.'"

Thank you for listening to GTA, the co-op way.

Federal Aid for Standby Seapower

EXTENSION OF REMARKS
OF
HON. JOHN MARSHALL BUTLER
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Monday, April 9, 1956

Mr. BUTLER. Mr. President, in the March 1956 issue of the Marine News, there is an article entitled "Federal Aid for Standby Seapower," on the need for a strong merchant marine. The article approaches this question from an angle that is given all too little consideration in the frequent controversies that arise over congressional attitude and actions with respect to American shipping. It discusses the advantages of a readily available commercial fleet—a vessel stockpile—and the relatively smaller costs to the Government of a consistent program of reasonable aid as opposed to an emergency vessel construction program.

The writer of the article, Richard T. Graham, evidently has a true appreciation of the many complex factors involved in the relationship between American shipping and Government. I ask unanimous consent that the article be printed in the Appendix of the RECORD so that its thought-provoking recommendations may have the wide distribution that they deserve.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FEDERAL AID FOR STANDBY SEAPOWER
(By Richard T. Graham)

As the new Congress proceeds with the preparation and enactment of its election year legislative program, the marine and affiliated industries should prepare and present for consideration sound and constructive subsidy programs that will enable the merchant marine to serve its country in these deepening and ominous times of international crises.

The shipping industry has historically been the first line of defense in case of war, and even with present-day emphasis on air power, it need only share its preeminent position in the Nation's defense picture with its brother of the skies.

It is the current consensus of military opinion that however advanced and however dreadful atomic weapons and warfare may prove to be, men must still take and hold ground, after the conditions favorable to occupation have been effected by naval and air power. These men by the millions must as always be transported over death infested oceans to accomplish this function and they will have to be transported by ships of the maritime industry.

This huge standby war potential, the merchant marine fleet of the United States, is now and has ever been ready to supplement with cargo bottoms, troop transports and trained officers and men—the paid naval power of the Government.

When it is considered that the gigantic tonnage, apart from manpower, would if not on a standby basis, have to be stockpiled as strategic material after the fashion that dies and tools are stockpiled against the need in case of conflict, and if it is true that millions of men in time of war have to be transported thousands of miles from this country to take and hold land and to do the job of war, then it follows logically that the marine industry is a vitally indispensable auxiliary of the armed services, and that it should be most generously treated by Congress as a reserve arm of the services, needed and ready for instant activiation in the event of war.

When war strikes, while many industries convert to war with the result of highly accelerated profits for many, the shipping industry finds itself whipsawed by the virtual disruption of its peacetime activities and the not-at-all resented, but virtually total, domination by the Government. It does not need to be said that when the shipping industry works for the Government, it does not make or keep very much money.

Compared with Federal grants in other and less vital areas of the national and war economies, it is fair to say that the merchant marine, with its gigantic and immediately available accession of strength to the country's naval power in time of war, has not been a conspicuous subject of congressional generosity or concern.

Perhaps the failure of Congress to render financial aid to the vital shipping industry on a par with the generous Federal grants made in other areas of the national economy is due, in some measure at least, to the absence of a well organized maritime legislative program and the adequate presentation of it to the Congress. With national financial assistance going routinely to the farm segment of the economy and legislation being actively sponsored for a Federal program of aid to education, the claim of the shipping industry to comparative and commensurate financial assistance has the added validity of the Nation's inexorable need for the merchant fleet in time of war and crises. A well-considered program of harbor installations, pier repairs and new ships should emphasize their war potential over and above their normal peacetime uses. When it is considered how invaluable the shipping industry is in the event of war, it should not be difficult to persuade Congress that it should be treated, at least, on a par subsidywise with the farm and education realm of Federal financial assistance.

Historically proud and incredibly brave, and unquestionably an essential standby auxiliary of the armed services, it deserves better of its country than has thus far been its lot.

It should not be prepared for its next turn as an active and indispensable component of the Armed Forces by being treated penuriously by the Government it has always served so well and faithfully.

It seems both fitting and proper that the splendid people in all phases of the marine industry should make these sentiments known to their representatives in Washington with dignity and persuasiveness, but in this instance, as seems never to have happened in the past, with the resourcefulness which has always typified this great industry.

Where Federal aid, foreign and domestic, is expanding and where the sons of the farm and our foreign cousins are unceasingly and insistently petitioning Congress for increased grants and perquisites, it is perhaps times that the marine industry, which up to now has been a slumbering and relatively unrequited giant where its financial preferment by the Government is concerned, should wake, stretch, rise, and fight for the right to have a marchant marine that will be ready for action as never before when its country calls.

Let's Fight for What Farmers Deserve

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, April 9, 1956

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial printed in the April 1956 issue of the Farm Journal.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LET'S FIGHT FOR WHAT FARMERS DESERVE

Because the Nation needs an expanding, prosperous agriculture rather than a shrinking one, the battle for progress in farming dare not cease. Income losses for many, even if not for all farmers, have grown serious.

Farm Journal editors here set out 17 points on which we strongly believe work needs to be done. Others could be added. These we think are basic.

1. Government must recognize that it demanded high production for the needs of war, and should face fully the responsibility for readjustment. It paid off the makers

of planes and guns so they could return to normal. It should be fully as fair with farmers.

2. This country is rich enough to relieve victims of disaster anywhere here, and in many places abroad. When drought and crop failure hit farmers they are no less deserving of outright relief.

3. War veterans and other farmers who have earned a fair equity in land or equipment ought to have enough help, private or public, in the way of further credit, that they will not lose what they have built up.

4. Private and Government agencies should push energetically to increase our sales in foreign markets; and no veto by the State Department on deals with the free world should be permitted.

5. The prospects for new markets and new uses for farm products have hardly been scratched. Research in these fields should be doubled and redoubled.

6. The kinks that cause actual waste and extra costs in distribution ought to be brought into the open and rooted out. They eat into farmers' profits.

7. New products have brought big prosperity to hundreds of American industries. Agriculture must have more ways to diversify. A large-scale research effort is overdue to find new crops farmers can make money with. This is a Government job.

8. No letup should be permitted in research to reduce our costs of production, but more of the work should seek to lower costs in other ways than simply by increasing output. This call especially for research in marketing and selling.

9. The nonfarm public should be helped to learn about farm situations. The ignorant insults to farmers which have lately come from writers who should know better would not be tolerated if the public were informed. Those in trouble deserve understanding, not sneers.

10. Farm credit practices need to be reexamined to make sure that farmers get as fair a deal as anyone else. Changes in farm business have increased the need for 2- to 10-year loans for sound investments like equipment and buildings which take a while a pay off.

11. Wherever it can be shown to help, we should have tariff protection against low-cost foreign competition. Every country tries to sell here, and often will subsidize exports, in order to get dollars. Other places need foreign foods and fibers worse than the United States does.

12. Government could well consider some new and real incentives to locate more industries in rural areas. Thus nearby but off-the-farm jobs could help many families to earn steadier incomes. It may well be one of the most practical things we can do for farmers. Wide dispersion of industry is desirable for defense and, in general, has proved to be good business.

13. Vocational courses should be developed in rural high schools for nonfarm subjects. They have mightly little of this now. Let's face the fact that not every farm boy will farm, and give those who choose a start toward being scientists, engineers, salesmen, or mechanics—or editors.

14. Cooperatives have saved and made farmers lots of real money. In general private businesses are far more efficient and fair than was true 40 years ago, but cooperaties have not reached their limits.

15. Featherbedding practices, or pay without full value in work, should be rooted out everywhere it exists in industry, transportation, labor, or government.

16. Nobody should be shielded from competition. No one—farmers, middlemen nor anyone else—can be blamed for buying as cheaply and selling as high, and making as much profit, as they can. But Government should see that competition is full, free, and fair.

17. Farmers will do best with the fullest freedom to decide how they want to farm. The agricultural good and public good may require some regulation of farming from here on—just as we have to regulate traffic—but free individual decision should be basic in American agriculture. We need to keep as much of it as possible.

Proposed Electoral-College Reform

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, April 9, 1956

Mr. MUNDT. Mr. President, during our recent discussion and debate of the problems which appear to necessitate electoral-college reform in our country, Members of the Senate received a telegram signed by the national chairman of Americans for Democratic Action, and a number of other pressure groups, asking that the Daniel-Kefauver-Mundt-Thurmond amendment be defeated. In our rollcall vote in the Senate, this proposed constitutional amendment to reform our electoral-college procedure received a gratifying majority, but it failed by six votes to receive the two-thirds majority required for a constitutional amendment. It is entirely probable that the telegram referred to above had some influence in costing us some of the votes on which we had depended.

In all events, in an editorial which appeared in the Pittsburgh Press is a most interesting disclosure of the manner in which some of these telegrams, letters, and petitions pretending to speak for many Americans actually operate. It clearly shows the habit of the leaders of many organizations who wire Members of Congress and pretend that they are authorized to speak for their membership on public issues. Frequently such pretensions are without foundation and without authorization, as it appears from the editorial was actually the case in the telegram urging Members to vote against electoral-college reform.

I call this to the attention of the Congress in the hope that it may prove a warning to all of us to look behind the signatures of officers of organizations to make certain that they have been specifically authorized to speak on the various subjects on which they presume to advise the Government.

I ask unanimous consent that the editorial published in the Pittsburgh Press be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Pittsburgh Press of April 1, 1956]

FOR WHOM THEY SPEAK

It happens all the time.

A man gets to be president of an organization. Then he becomes a spokesman. And he presumes to speak out on public issues, not merely as a citizen but as the leader of hunderds of thousands of individulas who happen to belong in his organization.

Usually, he doesn't bother to poll his membership. His opinions more often than not merely are his own. And he takes unwarranted liberty with his position.

Just a little sampling by the Scripps-Howard newspapers last week made it quite obvious that the leaders of 14 well-known organizations who telegraphed all 96 Senators demanding a "No" vote on reform of the electoral college were not necessarily speaking for their members.

Even local officers didn't agree with the attitude of their national leaders, who used the names of their organizations in their effort to defeat the electoral college proposal.

Walter Reuther can't speak for all auto workers. Reuben Kaminsky can't speak for all Jewish war veterans. A. Philip Randolph can't speak for all Pullman porters. Roy Wilkins can't speak for all members of the National Association for the Advancement of Colored People.

And so on. No organization's officers, really, can speak for all members. But they usually try it, without even testing majority sentiment among their membership. It is an old lobby practice. And it often works—simply because Congressmen are not in a position to check up.

Thus a few leaders, acting purely on their own judgment, become a pressure group—even if they do not have any real grassroots pressure behind them.

It is something Congressmen would do well not to overlook when a few important-sounding names turn the "heat" on them.

A Word in Favor of Mr. Dulles' Trips

EXTENSION OF REMARKS
OF
HON. FREDERICK G. PAYNE
OF MAINE
IN THE SENATE OF THE UNITED STATES
Monday, April 9, 1956

Mr. PAYNE. Mr. President, I ask unanimous consent that an editorial from from the Portland (Maine) Press Herald of March 24, 1956, entitled "A Word in Favor of Mr. Dulles' Trips," be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A WORD IN FAVOR OF MR. DULLES' TRIPS

America's peregrinating Secretary of State has become a favorite subject for cartoonists and quipsters as well as serious critics, like Walter Lippmann, of a schedule that keeps him away from Washington so much of the time.

They have a point, of course, in saying that when Mr. Dulles is away he cannot attend to matters at home, and in this day of tenseness and turmoil daily decisions must be made in Washington. There is always the chance that a crisis will develop in his absence.

Frankly, we think the carping at Mr. Dulles' penchant for traveling has gone beyond reason and that a word in his defense is in order. He has, for instance, just returned from a 10-nation tour of Asia. During that time trouble broke out in Cyprus and troubles continued in North Africa and the Middle East.

On the one hand we question whether any serious change in American policy would have taken place, or whether any emergency decision would have been made had Mr. Dulles been at his desk during this period. On the other we suggest that if an emergency needing immediate attention had de-

veloped, it would not have been too difficult for the Secretary to get back to his desk within a matter of hours.

A third point, and one frequently overlooked by the Secretary's critics, is that Mr. Dulles can accomplish a great deal of quiet and effective work on his rovings. His recent trip to Asia may have done more than anyone realizes to reassure Asiatics, particularly the neutrals, that the American foreign aid policy still has them in mind and that this country will do everything possible to protect them against communism. Mr. Dulles' trip may indeed have prevented a crisis from arising in Asia at some future date when he perhaps was attending a conference on the other side of the world.

We seriously doubt that this Nation's prestige, policies, leadership, or the day-to-day work of making decisions, has been seriously injured by the junketing of Mr. Dulles.

Until it can be clearly proved otherwise we will believe his visits to foreign nations for the purpose of explaining policies and making friends have materially buttressed America's position of anti-Communist leadership in the world.

The Communist Conspiracy

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, April 9, 1956

Mr. MUNDT. Mr. President, I have in my hand a commentary by Washington's distinguished David Lawrence which merits the careful reading of all who see and read the CONGRESSIONAL RECORD.

At long last, we are making headway against the fifth-amendment Americans, who lack the courage of their convictions—if they have convictions and are not actually acting under discipline of their Communist overlords—and who hide like cowards behind the protection of the very Constitution of the United States which they seek to undermine and destroy.

The Supreme Court has recently ruled most wisely in restricting the use of the fifth amendment in such capricious cases, and in giving both Congress and the Department of Justice new powers and authority to "make 'em talk" or to "make 'em go to jail for contempt." This is an authority which Congress and the Department of Justice should now combine to use in order that we can strengthen our internal security to the same degree that all of us are vitally interested in strengthening our national defenses against dangers from abroad.

I ask unanimous consent that Mr. Lawrence's article, entitled "Noose Tightened on Traitors," be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NOOSE TIGHTENED ON TRAITORS—SUPREME COURT DECISION EASES TASK OF EXPOSING COMMUNIST CONSPIRACY

(By David Lawrence)

The noose is gradually tightening around the traitors in our midst.

The Supreme Court of the United States has upheld the constitutionality of the law that Congress passed which makes it easier for persons who have knowledge of the Communist conspiracy to tell what they know without fear of prosecution themselves.

The way now is opened also to compel those persons to give testimony who have played a part in the Communist conspiracy but have refused to aid their own Government in running down any other persons involved in the conspiracy. The loyal citizen, formerly a Communist, now has nothing to fear by telling all.

There are many persons who were duped by communism and who did not participate in any conspiracy. Some of them have pleaded the fifth amendment before various tribunals. This permits anyone to refuse to testify if the testimony can lead to his own conviction for a crime. It is generally called "self-incrimination." Some witnesses have invoked the fifth amendment as a means of avoiding doing their duty to their Government, because they were afraid to involve their friends. But Justice Frankfurter, speaking for the Supreme Court, says in the opinion handed down this week:

"* * * It is every man's duty to give testimony before a duly constituted tribunal unless he invokes some valid legal exemption in withholding it."

Up to 1954, a witness could invoke the fifth amendment, and there was no way to determine whether he was seeking merely to protect himself or to shield others. Then Congress passed in 1954 a so-called immunity law. It made possible an explicit guaranty by the Federal Government to the witness that he or she would not be prosecuted for any crime involving the national security, sedition, or treason to which the witness might confess but, once this immunity is granted, such a witness cannot refrain from telling what he or she knows about crimes committed by others in the group with whom the witness may have associated.

The present law gives to Federal judges the right to grant immunity upon consideration of an application filed by the Department of Justice. It is broad enough to cover immunity also to witnesses before congressional committees, but the Supreme Court, for the time being, merely passed on the validity of a particular section of the law requiring a witness to give testimony before a grand jury. Obviously, if congressional committees are duly authorized by either House and ask for witnesses to testify in accordance with a procedure specified in the law, it becomes possible for the Department of Justice to grant witnesses immunity if they will tell all they know to such congressional committees. Since the circumstances are parallel, it may be assumed the Court will uphold the rights of congressional committees to compel testimony from witnesses.

This opens up quite an opportunity for the Congress and the executive branch of the Government and the courts to get valuable information about espionage and other acts that threaten the national security. It doesn't mean that those who invoke the fifth amendment and are granted immunity will not find some other technical means of evading full disclosure of what they know, but a long step now has been taken in the direction of detecting acts of treason.

For several years now many of the so-called liberals have issued pronouncements tending to argue that the fifth amendment has not been abused. The mere pleading of the fifth amendment is, of course, no proof of anything—either the guilt or innocence of the witness. But there has grown up a movement sponsoring the concept that the fifth amendment is all-inclusive and that persons who invoke it may do so even though they are not themselves guilty of any crime. It has been argued that a man has a constitutional right to refuse to testify if the testimony could injure his friends. But Justice Frankfurter's comment in the latest decision confirms a long-held view that the duty of a man to protect the rights of all the people supersedes any individual right, particularly when the safety of all the people is at stake.

It has been contended, for example, that it is better that 50 guilty men escape than that a single innocent person be compelled to testify against his own wishes. But this might be paraphrased to say that it is better for a whole city to be bombed rather than that a citizen who has knowledge of the enemy's plans be compelled to divulge them in advance to his own Government, to which he claims allegiance.

Dissenting from the 7 Justices who upheld the immunity law are 2 Justices—Douglas and Black—who feel it should have been declared invalid. They argue that the immunity from prosecution will not mean immunity from infamy, which they say would pursue a witness even if he isn't tried in a court. The contention is made that a man who is a confessed Communist incurs a risk that he will not be eligible for employment in the Federal Government or in defense facilities or that he might be disqualified for a passport.

The answer to this is a question of fact. And the fact is that persons who have shown loyalty to their own Government by getting out of the Communist Party and telling all they know have been and still are in the Government's employ, have been given passports, and do not suffer any punishment if they tell the truth and cooperate with the authorities. If mere publicity of an unfavorable nature is a stigma, then the whole court system of America is at fault. For every year thousands of persons are indicted, with their cases given wide publicity, and then acquitted. Public opinion can be relied upon to distinguished between those who deserve infamy and those who have courageously manifested their patriotism as well as their loyalty.

Republic of Lithuania Day—Proclamation of Governor McKeldin, of Maryland

EXTENSION OF REMARKS
OF
HON. JOHN MARSHALL BUTLER
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Monday, April 9, 1956

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a proclamation by the Honorable Theodore R. McKeldin, Governor of Maryland, commemorating Republic of Lithuania Day.

There being no objection, the proclamation was ordered to be printed in the RECORD, as follows:

GOVERNOR'S PROCLAMATION, REPUBLIC OF LITHUANIA DAY, FEBRUARY 16, 1956

Lithuania is enslaved, her people have been deported and mass-murdered, religion is ruthlessly suppressed, and freedom obliterated.

But it is not easy to shackle a liberty-loving nation. It is doubly difficult when that nation has known the great experience of freedom.

Lithuania has known and gloried in that experience.

We, as Americans, cannot ignore these yearnings for our own basic beliefs. We share the struggles of little Lithuania to break the Kremlin yoke.

Showing their faith in a free future, Americans of Lithuanian descent continue to celebrate this day—February 16—as Lithuania's Independence Day.

In recognition of the courage of the Lithuanian people and in support of all men who fight for freedom, I, Theodore R. McKeldin, Governor, proclaim February 16 as Republic of Lithuania Day throughout Maryland.

Given under my hand and the great seal of the State of Maryland, at the city of Annapolis, this 30th day of January, in the year of our Lord, 1956.

THEODORE R. MCKELDIN,
Governor.
BLANCHARD RANDALL,
Secretary of State.

Ike Asked for It

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 15, 1956

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent, I include the following editorial from the Standard-Times, of New Bedford, Mass., for Tuesday, April 3, 1956:

IKE ASKED FOR IT

In two recent press conferences President Eisenhower discussed the school segregation issue in the South, saying this is "a time when we must be patient" and try to avoid "a tremendous fight that is going to separate Americans and get ourselves into a nasty mess."

Unfortunately, the "mess" which the President deprecates, already exists and should have been foreseen, when under White House pressure, the Supreme Court reversed the law of 60 years standing with reference to school segregation in the South.

Several cases involving alleged discrimination against Negoes in Southern schools were pending in the Supreme Court when former Governor Warren became the new chief justice. The views of the President against segregation were well known, as may have been those of Chief Justice Warren. But to make doubly sure the Supreme Court made the "right" decision, the President instructed Attorney General Brownell to appear in the case, as a "friend of the court," urging desegregation.

Two important provisions of the Federal Constitution are involved in the desegregation decision. The 14th Amendment, approved in 1868, forbids any State to "deny to any person within its jurisdiction the equal protection of the laws."

The other provision of the Constitution directly affecting the desegregation problem is that one which specifically says, "The powers not delegated to the United States, by the Constitution, nor prohibited by it to the States, are reserved to the States, respectively, or to the people."

Under the former provision of the 14th Amendment, no State could discriminate between Negro citizens and whites with reference to schools or otherwise. Under the second provision, the 10th Amendment, control of the schools was specifically reserved to the States, as not having been delegated to the Federal Government.

Obviously, under the 10th Amendment the South had the undisputed right to control its schools, unless its policies violated the 14th Amendment forbidding discrimination between Negroes and whites. For 60 years the Supreme Court had ruled the 14th Amendment requires "equal" school and other facilities, but not identical; in other words, schools and other facilities "may be separate, but must be equal.

The Warren decision, which the President now faces with pleas for patience, destroyed the school formula of the South, a formula under which admittedly the Negroes of the South and the South had made steady and peaceful progress for more than half a century.

In a windy decision by Chief Justice Warren himself, the Chief Justice said in effect, "The very fact of segregation constituttes discrimination, gives the Negro a sense of inferiority, etc."

That this is untrue is evidenced by the fact many of the leaders of the Negroes in the South and the North, including many of the Negro school teachers of the South, not only feel no inferiority as a result of segregation, but object to atttempts to force desegregation upon either Negroes or whites.

Though the President may not himself have been influenced by political considerations, the Warren decision was heavily weighted with politics.

Leaders close to the President undoubtedly told the President desegregation, if accomplished during his administration, would go a long way toward winning back the Negro vote of the North. This vote had been lost to the New Deal of the Roosevelt-Truman era.

Not only was such a purpose highly improper, but it has not and it will not work. For one thing, there is no segregation problem in the North—for there is no segregation. For another thing, the Negro vote, to whatever extent it was and is Democratic, is influenced by the New Deal philosophy, which only can be cured, if at all, by the process of education, a process which has been rudely struck down in the South by the recent Supreme Court decision.

Another equally improper consideration which is thought to have been influential in the Supreme Court's "political decision" is that there was thinking emanating from the State Department that desegregation would eliminate Communist-inspired criticism of the United States in India and others of the countries of the "dark races."

Here again the administration did not see beyond its own nose. The antipathy of India does not spring from segregation in southern schools, etc. It springs from the fact that India, while recipient of our generous bounty, is basically Communist in its sympathy and is interested in the segregation issue of this country only because it suits its own propaganda purposes.

We're sorry for the southern whites and southern Negroes to be pawns in this politicking of the Supreme Court. We're sorry for Ike now that he sees what he helped to procure and produce. It's going to take a lot more than patience to solve this one—on Ike's part as well as of those in the North and South whom he beseeches.

The Need for the Bricker Amendment

EXTENSION OF REMARKS
OF
HON. JOHN PHILLIPS
OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 9, 1956

Mr. PHILLIPS. Mr. Speaker, nobody knows better than do the Members of the Congress, both in the House and the Senate, the very real need for some clarification of the relationship between the Constitution of the United States, and agreements, treaties, or other enactments of international bodies which could be, and already are, in conflict with our Constitution.

An editoral in the current issue of Town Journal raises this pertinent question: "Shall Americans be compelled to live under laws put in force by treaties or other international agreements even though they conflict with the Constitution?"

We need action by the Congress, and by the people of the United States, along the lines of the proposed Bricker amendment. I have asked unanimous consent, Mr. Speaker, to include the above-mentioned editorial, with these comments.

A CHANGE TO MAKE

The Washington reports shortly will be discussing the Bricker amendment to the Constitution. As usual many confusing and many inaccurate statements will appear. some of these will be intentionally misleading.

The question raised by the Bricker amendment is this: Shall Americans be compelled to live under laws put in force by treaties or other international agreements even though they conflict with the Constitution?

In order to be adopted, an amendment has to win a two-thirds vote in each House of Congress and the approval of three-fourths of the States. The Bricker proposal will come up for a vote this month in the Senate and will then be presented before the House.

Two years ago 28 Democratic Senators voted for it and 16 against; 32 Republican Senators voted for and 14 against; 1 independent voted against. This division shows clearly that the amendment is not a party question. The total lacked one vote of the necessary two-thirds.

Passage this year will depend upon the vigor with which informed citizens indicate their support. The division may again be close in the Senate. A hard battle may be expected in the House.

The language of the amendment, slightly changed to meet former objections, is simple and clear: "A provision of a treaty or other international agreement which conflicts with any provision of the Constitution, shall not be of any force or effect."

The Constitution itself says that a treaty "shall be the supreme law of the land * * * anything in the Constitution or laws of any State to the contrary notwithstanding." That provision was written primarily to protect the treaties then in force which had been made prior to the Constitution. It was probably intended also to give the national Government full control in foreign affairs, which it should have. In those days treaties concerned boundaries, commerce, fishing rights, navigation and such matters.

In recent years, however, wholly new circumstances have arisen. Through the United Nations and other new agencies, the United States is asked to participate in many new kinds of international agreements and treaties. The practice of "executive agreements" between nations has grown up—deals between heads of nations which are not submitted to the United States Senate, as treaties have to be, for ratification.

Ways are thus opened by which Americans could be forced to accept as domestic law rulings which have not been passed upon by Congress and which could conflict with Constitutional rights. It is this danger which the Bricker amendment will prevent.

The amendment, as revised, should be adopted. Americans will protect their freedom for the future by insisting that Congress submit it to the States.

Stalin: The New Villain

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 9, 1956

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I present the following text of an editorial which appeared in the Christian Science Monitor on Saturday, March 31, 1956:

STALIN: THE NEW VILLAIN

The great fault of Premier Joseph Stalin now lies exposed. Moscow's Communist newspaper, Pravda, says he lacked modesty. This led the former distator into errors and abuse of power.

For when successes of the Soviet people were attributed to the leader, says Pravda, he "did not cut short the glorifications and praises addressed to him but supported and encouraged them," so that the "cult of the individual assumed even more monstrous forms and did serious harm to the cause [of communism]."

Only as long ago as in November 1950, one issue of this same paper, Pravda, contained mention of Stalin's name 101 times on its front page alone, including such variations as "great Stalin," "dear and beloved Stalin," "Stalin the genius," "great leader of all workers," and "great leader of entire mankind."

Around the same time Minister-President Grotewohl of East Germany in a birthday address extolled Stalin as "the wisest prophet," "greatest master of sciences," "greatest politician," and "greatest of all living men." Herr Grotewohl has ordered explanation from his state prosecutors of illegal arrests—which would not have been question in Stalin's time.

While Communists in the Soviet Union, the satellite states, and a score of other countries turn themselves inside out trying to adjust to the reversal of party gospel, non-Communist nations are curious to evaluate the purge of Soviet literature and history which the collective leadership under Party Secretary Khrushchev has undertaken.

What are the reasons for it? What is it designed to accomplish? What are its probable results?

Observers acquainted with the Soviet Union, its language, thinking, background, and current problems, believe the development has come about chiefly for reasons of internal strategy and in response to pressures inside the Soviet Union. It also serves an external purpose, to quiet the fears and relax the vigilance of anti-Communist nations and to make Soviet Marxism look less terroristic and forbidding to uncommitted nations.

Where one interpreter believes the change signals a plight of desperation for Secretary Khrushchev and the Communist leaders, another believes they would not have initiated so great a venture if they had not felt their rule secure. The denunciation move may have got rather out of hand at the end of the recent party congress, but the Moscow leadership seems to have it back on a gradual course now.

Whatever the eventual appraisal, a few points are clear. One is that the ultimate objective of Communist strategy—namely, world domination—is unchanged. Another that some nations, such as evidently Iceland, may be fooled by talk of "relaxation of tensions." A third, that whatever the guilt of Stalin, it must be shared by the present masters of the Kremlin, for they were his axmen on dozens of missions. And, fourth, that even though propaganda may hark back to Lenin instead of Stalin, a "dictatorship of the proletariat" must involve a "cult of personality," whether of one or of a small group.

If the object is to avoid costly mistakes and abuse of power, is not a system more effective which gives freedom to criticize while events are taking place—which allow reasoned, responsible opposition to a leader while he is in power instead of postponing objective examination until after his demise?

Louisiana's Tideland Boundary

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 7, 1956

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks, I wish to include an editorial appearing in the Shreveport Times of April 2, 1956, entitled "The Federal Suit on Louisiana Tidelands." I feel this editorial clearly points out the situation in which Louisiana finds itself and I commend it for the study of the Members.

The editorial follows:

THE FEDERAL SUIT ON LOUISIANA TIDELANDS

The United States Supreme Court has granted the Federal Department of Justice permission to sue the State of Louisiana to determine jurisdiction over offshore mineral resources; usually, though incorrectly, called tidelands. Louisiana claims that its historic boundary runs three leagues out from shore, or about 10½ miles. The Federal Government, through Mr. Brownell, claims that Louisiana's jurisdiction extends only 3 miles seaward.

In asking authority to bring this suit Mr. Brownell told the Supreme Court that it probably would not be necessary to take evidence. That is a rather amazing position. The whole issue of Louisiana's boundaries goes back to documentary evidence of more than a century ago and includes the matter of different seaward boundaries for Louisiana on one side and for Texas and Florida on the other.

The Texas and Florida seaward jurisdiction was established at 10½ miles by the Tidelands Congressional Act of 1953, but that act placed Louisiana's seaward boundary at 3 miles. The reason given for this difference was that Texas and Florida came into the Union when part of the Spanish Dominion in North America, and the ancient Spanish law set offshore limits at 10½ miles; but Louisiana came into the Union through the Louisiana Purchase from France which, the Federal Government claims, had not established a 10½-mile limit.

All of that is subject to considerable dispute. The Dallas Morning News comments on that point in this way:

"Louisiana was equally a part of the Spanish domain from 1763 until its so-called retransfer to France shortly before Napoleon sold the Territory to the United States in 1803. Technically, it is doubtful that Spain had relinquished its ownership of Lousiana at the time Napoleon sold it. (The Emperor was merely a hijacker disposing of his swag.) The real American title to Louisiana probably dates from 1819, when the United States signed a treaty with Spain covering the boundaries affecting Florida and all other parts of Spanish territory.

"In any event, Louisiana is entitled to have all the evidence, historical, and otherwise, thrashed out in open court."

The Importance of Limiting the Powers of Congress

EXTENSION OF REMARKS
OF
HON. JOHN PHILLIPS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 9, 1956

Mr. PHILLIPS. Mr. Speaker, the gradual concentration of power in the hands of a central government has been creeping up on the body politic in the same way a disease might creep up on the human body. It is in the dangerous stage before the patient realizes its seriousness.

In some States the Federal Government owns more than half of the land area, and in the Nation as a whole it owns 25 percent. It owns properties worth $50 billion. Its electrical units produce one-fourth of the Nation's power. It tells the farmer what to plant and when to reap, a situation against which Jefferson wisely warned our forefathers. It has mortgaged every one of us individually to the extent of $1,700, without our deliberate approval, and its annual costs take $1,000 or more from each taxpaying worker. It collects 75 percent of all tax revenues.

The current issue of Town Journal has an excellent editorial on this subject, by the publisher, Graham Patterson. I have asked consent to include it with this extension of my remarks.

I am particularly pleased that the editorial gives well-deserved recognition to a movement in which our good friend and colleague, the gentleman from New York [Mr. GWINN], is an active leader, and in which I am proud to take a small part. This is the movement known as the Committee of the 48 States, which is meeting enthusiastic support for a program of interesting the States to move in for the protection of their own rights and liberties. Congress has abdicated; the bulwark of individual liberty and States' rights, contemplated in our Constitution has moved to the States.

The editorial follows:

LIMIT THE POWERS OF CONGRESS

The patriots who drafted our Constitution were far-seeing men whose aim was to establish a nation "of people, by the people, for the people." They recognized the frailties of men, and designed the Constitution to protect the people against them. They wisely divided power between the executive, legislative and judicial branches of government, so each would act as a counterbalance against usurpation of too much power by the others.

For a century and a half, America prospered and great under that system, but for the last two decades there has been a gradual but relentless shift away from the solid foundations on which our Nation was built. More and more power has been assumed by Government, with less and less freedom to the individual until, if the trend continues, we will be legislated into a paternalistic welfare state. As Woodrow Wilson so aptly said, "The history of liberty is the history of limitations on the power of government."

Before World War II, Adolph Berle, Jr., then Assistant Secretary of State, pointed out that the inevitable result of Government financing of activities previously considered

a part of private enterprise would be Government ownership of those activities. He prophesied: "Over a period of years the Government will gradually come to own most of the productive plants of the United States." The accuracy of his prediction is disturbingly evident.

Every American abhors the Communist doctrine of government ownership of land and resources. But how many realize that today the Federal Government already owns about 25 percent of the land area of the United States? It has housing projects and business properties worth about $50 billion, and electrical power projects that will produce a fourth of all our power. The Government is in the insurance business; it can fix minimum wages, can tell a farmer how much he can plant of certain crops without penalty. Through its borrowing power it has mortgaged every man, woman and child in the Nation to the extent of $1,700. Much of what the Government does not own outright, which is communism, it regulates and controls, which is socialism. Only 20 years ago the States and localities collected 75 percent of all tax revenues, but today the Federal Government collects 75 percent. Through its taxing, regulatory and controlling powers, it has confiscated and transferred to itself at least one-half of the value of all private property in the country.

Fortunately, there are wise heads that recognize the danger of our present course and are trying to do something about limiting the functions and spending power of Congress. One of the leaders in this movement is himself a Congressman, the honorable Ralph W. Gwinn of New York State, who said: "The responsible leaders of Congress, Republican and Democratic, realize that Congress cannot and will not restrict its own powers. I believe the majority in Congress would welcome constitutional restrictions and limitations. * * * I feel convinced that few individual Senators or Congressmen can resist the pressures of socialism and the forces of inflation unless and until the States and the people enact constitutional restrictions and limitations on the Federal Government."

Speed the day.

Washington's Optimism

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 9, 1956

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include an article written by James Reston, Washington correspondent of the New York Times, appearing in the April 5, 1956, issue of that paper. Mr. Reston is recognized as an outstanding correspondent and an able evaluator of news and events. There is a lot of truth in the feeling that President Eisenhower, Secretary Dulles, and the present administration is overoptimistic. There is also a strong feeling that the true conditions existing throughout the world are not being given to the American people.

The article follows:

WASHINGTON'S OPTIMISM—AN APPRAISAL OF ADMINISTRATION'S BENT FOR LOOKING ON BRIGHT SIDE OF THINGS

(By James Reston)

WASHINGTON, April 4.—The administration is looking upon a critical world with determined optimism.

The British, the French, the Canadians, the Israelis, the Arabs, the Dutch, the Indians, the Algerians, the farmers, and the Democrats are all complaining about some aspect of Washington's policy, but the administration's leaders manage to smile and see some good in everything.

Secretary of State Dulles, who is normally a reflective and gloomy man, took correspondents on a tour of the world yesterday and found an optimistic side to every question.

President Eisenhower, who is a living symbol of confidence, carried on the cheery offensive in his news conference today.

Mr. Dulles was, on balance, hopeful yesterday about the "Joe-must-go" policy in Moscow. He agreed that the United States was being criticized all over the world, but concluded that this was a fine "tribute" to the United States because it proved nobody was afraid to criticize us.

He was confident that the free world would maintain its strength, faith, and unity, that the leaders of the new Asian countries were alert to the dangers of Soviet trickery and that Iceland, whose Parliament has been calling for the American troops to go home, would not insist on that.

So far as the Middle East was concerned, the Secretary of State saw no emergency that would require the President to seek congressional authority to take any military action in that region. Nor did he think that Premier Gamal Abdel Nasser, of Egypt, was actuated by anything but a desire to carry on his ties with the West and maintain a "genuine independence" for the Arab states.

PRESIDENT'S OPTIMISM PREVAILS

The President showed moments of irritation and even anger today and admitted that once in a while he was "discouraged" by the density of reporters, but by and large he was as optimistic as his Secretary of State.

He indicated that the farm bill, which is now a mishmash of political expediency, would be signed even though it fell far short of his desires. He was reasonably hopeful about progress with the Russians in the field of disarmament. He was not discouraged about the record of Congress, and would not join the other Republicans who were criticizing the Democrats on Capital Hill. And he was full of praise for the North Atlantic Treaty Organization, now celebrating its seventh birthday.

Western Europe is worried about the development of Soviet atomic power and guided missiles has weakened if not destroyed the "forward defense" strategy of the North Atlantic powers and rendered obsolete many of the Western bases in Denmark, the Low Countries, and France. But the President talked enthusiastically about the improved defenses, and particularly "the morale" of the western nations.

This is apparently the key to the administration's approach to these problems, domestic and foreign: that it is important to keep up the morale and therefore essential to look on the bright side of things.

The President would not make gloomy assumptions about the middle eastern situation today. Though he has authorized his representative at the United Nations to cite the Israeli-Arab disputes as a potential threat to peace, he insisted that he would never order United States troops into anything that could be interpreted as a war in that or any other part of the world without first seeking the authorization of Congress.

Yesterday, the Secretary of State noted that in an emergency, or when the Congress was not in session, it might be necessary for the President to order military action on his own. This question arises in the middle eastern situation because the President has committed himself to support the May 1950 declaration, which obligates the United States to take action to restore the peace in the event of an armed conflict between Arabs and Israelis.

It also arises because Congress will be away on the Presidential campaign this year at the height of the best fighting season in the Middle East. But General Eisenhower, in the sharpest retort of his period of office in a Presidential news conference, rejected any thought of intervention without congressional approval.

He did qualify this by saying that if his troops were attacked they might have to undertake warlike acts to "defend themselves," but he seemed far less willing than many of his predecessors or his Secretary of State to deal with the kind of emergency situation that has often in the past necessitated Presidential warlike acts with congressional approval.

THOUGHT OF WAR DISTASTEFUL

This is one of the most interesting aspects of the President's personality. One of the complaints made against him when he was seeking the Presidency was that as a military man he might be too prone to solve international problems by peremptory military diktat, or even by military action. It is now fairly obvious that, more than to most men, the very thought of war seems distasteful to him.

This came out again today when he was asked whether he intended to go to this spring's hydrogen bomb test in the Pacific. He has been urged to do this by some members of his administration on the ground that he has never seen an atomic bomb go off and that warfare has changed more since he comanded an army in the field than it changed Appomattox and the Normandy landings.

He replied that he had never seen such a test. Speaking very quietly, he said that in his strict capacity as commander in chief maybe he ought to "go and see one of these things."

"But I am trying," he added, "to prove to the world that my chief interest in the nuclear science is peace."

The reaction of the Washington community to this approach is divided. Some observers here believe this determination to look at the bright side of things, to emphasize the peaceful over the warlike the elements of progress over the elements of progress over the elements of conflict, the general over the specific is precisely why the President is so effective and popular a leader.

Others think it is a Pollyanna attitude, a form of wishful thinking that wins votes but encourages popular illusions about the true state of world affairs.

Our Wastrel Substitute for Former Self-Reliance

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 9, 1956

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to insert the following editorial from the April 1 edition of the Detroit Free Press entitled "Our Wastrel Substitute for Former Self-Reliance":

OUR WASTREL SUBSTITUTE FOR FORMER SELF-RELIANCE

Something has happened to Uncle Sam.

The cartoonists still make him look the same—tall, erect, dignified, and even stern, or fighting mad when the occasion demands.

But, as the minstrel used to say: "He don't act that way no mo'."

We, in the United States of America, have long taken pride in our national heritage.

From the days of the struggle for independence through the many glorious chapters of our history, this Republic has endured and prospered, because its people were dedicated to liberty and a free, competitive capitalism.

The symbolic Uncle Sam of our schoolbooks was no weakling. He fought and bled at Valley Forge, explored the wilderness, defeated the British in 1812, purchased Louisiana, preserved the Union, enunciated the Monroe Doctrine, bought Alaska, won two World Wars, survived booms and busts and brought this Nation to a position of unquestioned leadership.

The traditional Uncle Sam knew where he stood. Right or wrong, he never wavered in his determination to protect our national interests.

Today Uncle Sam is a kindly, befuddled old gentleman who wants everybody to love him. His concept of leadership is to scatter the taxpayers' money over the world on the mistaken idea that dollars will buy friendship.

The President's request for $4.9 billion in foreign-aid funds is typical of Uncle Sam's philanthropies.

After World War II, we sent billions to get Europe back on its feet. More billions have followed, either in economic aid or for military assistance.

The argument was that an economically stable Europe would not succumb to communism. Or, putting it another way, Europe would go communistic if we did not help.

These billions were given cheerfully by the American people as neighborly assistance in times of difficulty.

But the givers, all of us, never expected that this neighborly aid would become a permanent part of our foreign policy, as it is now.

Today's approach is that these additional billions are needed to meet "Russia's new departures in foreign policy."

The Russians, it seems, have shifted from a policy of economic isolation to one of aid to countries they hope to bring into the Communist orbit.

But the Russians do it by loan and barter, getting a ruble's worth for every one they put out. They fight economic wars as they fought in Korea and Indochina—no casualties to the Russians.

The benign and timid Uncle Sam, however, is so fearful of making enemies that he keeps on giving away your money without asking a thing in return.

Just how successful has Uncle Sam been in buying friendship and meddling into foreign affairs that should rightly be the concern of the United Nations?

India has always resented our aid to Pakistan; is now seeking nearly $2 billion for her 5-year plan of socialism while taking a neutral position in our fight against the extension of communism.

The British, though stout allies, resent our criticism of their actions in Cyprus; the Dutch are mad over United States tributes to Indonesia, her former colony.

France and Italy, both politically unstable, seethe with communism. France is alternately nettled and pleased with what we say about her troubles in North Africa.

In the dispute between Israel and Jordan, we have placated neither side.

Our relations are uncertain with Egypt but we plan to build a huge dam and irrigating system in Egypt on the theory that if we don't do it, the Russians will.

Herbert Hoover, Jr., of the State Department, has testified that $200 million of the new foreign-aid program will be divided between a special Middle-East-Africa fund and the Far East.

His argument for the new program is (1) that military aid "will make outright aggression unprofitable and thus unlikely," and (2) economic aid will "promote stability and minimize the threat of subversion."

This is mere wishful thinking and more rationalization by a State Department noted for its blunders. As the Wall Street Journal points out: "After some $55 billion of postwar foreign aid * * * from France to Cambodia * * * there is no diminution of anti-Americanism or any lessening of Communist influence."

On March 20, the Chicago Daily News made this pertinent comment: "There is something craven in the spectacle of a rich and powerful nation which thinks it must scatter candy around the world lest it find itself alone and friendless.

"The facts seem to be that our largess brought no friends, and earned us more resentment than good will. But we still fear to change the formula."

The younger, self-reliant and thrifty Uncle Sam of other days has, through the aging process, become a charitable old gaffer with the urge to solve all of the world's ills.

He is being encouraged in this course by a combination of misguided idealists and proponents of some form of world government in which we merge our national interests into a political, economic, and military union with Uncle Sam footing most of the bill.

There is no difference between Republican and Democratic administration on this score. The big idea is to see how much Uncle Sap can give away.

Nowadays, we don't even wait for aid requests. Our Secretary of State goes gadding all over the globe to see if we have missed anyone who has communism or socialism for sale.

He looks for trouble, and usually finds it.

The time has come for Uncle Sam to regain his dignity, reappraise his policies and take a hitch in his pocketbook.

For, as the saying goes, "he ain't what he used to be."

The Only Argument

EXTENSION OF REMARKS
OF
HON. SAM COON
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 29, 1956

Mr. COON. Mr. Speaker, under leave to extend my remarks I wish to insert in the RECORD the following editorial from the Industrial News Review, of Portland, Oreg.:

THE ONLY ARGUMENT

Former Under Secretary of the Interior Tudor recently said that he found opposition to the partnership plan of electric-power development hard to understand. He added: "If it is wrong to permit private enterprise to generate electricity from natural resources, isn't it equally wrong to permit private enterprise to cut trees for lumber, mine minerals, or even use the soil to produce crops?

"Is there something separate and peculiar about our water resources that justifies the application of a basically different set of rules and principles to their development? I cannot satisfy myself that this is the case."

The hue and cry over partnership has been principally generated by vocal and well-organized groups which want this country to have socialized Federal power—or no power at all. And it is these groups which have attempted, obviously with some success, to sell uninformed people on the idea that partnership involves the giveaway of priceless natural resources to selfish private groups. Actually, under partnership nothing whatsoever is given away to anyone. The private enterprises involved pay for their part of the development with their own money. They sell the power at rates which are regulated by public service commissions, and they pay heavy taxes for the privilege. The natural resource involved, water, is returned to the stream once it has energized the powerplant.

It should also be remembered that partnership is not confined to the private utilities. The invitation is held out, as well, to local public-power bodies, such as municipalities.

Finally, there is only one valid argument against partnership. It is the ideological argument that Government should monopolize our power resources. On this ground, all who favor socialism should fight partnership. All others should support it.

Catching Cheaper Fish

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 9, 1956

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Boston Herald of Monday, April 2, 1956:

CATCHING CHEAPER FISH

There are at least 31 bills concerning the fishing industry before Congress, practically every one of which proposes either tariffs or quotas on imported fish.

The fishing industry, particularly New England's fishing industry, needs to be helped. But neither tariffs nor quotas are the means to do it.

Tariffs and quotas are an artificial dodge. They harm international trade, which we are endeavoring to encourage. And tariffs and quotas would actually hurt the fishing industry itself by knocking out its latest and liveliest development—fish sticks.

Fish sticks are made of imported fish because imported fish are cheaper. Restrict the infant fish stick industry to more expensive domestic fish and competition from other foods will put it out of business. The basic problem is to find the means to bring the cost of domestic fish down to the level of imported fish.

Of course this is easier said than done, but that does not mean that it is impossible to do. Right in New England's front yard are some of the greatest fisheries in the world, a major natural resource. Where is that famous American know-how that everybody talks about so much? Where is all that American credit? Unfortunately there can be little know-how until there is credit, and there is not much credit available because the fishing industry in its present predicament does not present a very attractive opportunity for investment.

In Canada, on the other hand, which is our greatest foreign competitor, there is good government credit available. That credit, which takes many forms, the most important of which is in boat construction, makes the investment burden of the boatowner much lighter. When combined with lower Canadian wages, short distances to fishing grounds, and other government aid including technical services a fishermen's indemnity fund, you get cheaper fish.

The United States cannot compete with Canada on wages, and of course we would not want to try. But we could set up a Government credit system if not outright subsidies for our fishing fleet. We subsidize and otherwise aid the merchant marine for the construction and operation of vessels. Why shouldn't we subsidize the fishing fleet? It is just as important to our peacetime economy and wartime defense.

Independence Day of Byelorussia

EXTENSION OF REMARKS
OF
HON. JOHN LESINSKI, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 9, 1956

Mr. LESINSKI. Mr. Speaker, March 25 is the date on which the Byelorussian people traditionally celebrate their independence.

Being familiar with the history of Central Europe from as far back as the year 1000 A. D., my attention has constantly been drawn to the extreme adherence of the Byelorussian people to the principle of self-rule and their desire to assist others in attempts to throw off the yoke of foreign powers. It has been the constant struggle of these peace-loving nations that has defeated those who wish to usurp the free people.

In the past, in 1812, in 1863, and on other occasions the Byelorussian people gave forceful proof of this constant desire to be free of the yoke of Russian rule. They were successful in 1918 and established a new national republic. This freedom, however, was short-lived and the young republic fell subject to the pressures of the Red Army to be divided between Russia and Poland in 1921.

All of us who are familiar with the actions of Russia in the 17th century and following should learn a lesson from this glaring example from history as to what is the actual intent of today's communistic rulers of Russia.

We who are familiar with what is going on behind the Iron Curtain cannot understand why the present administration will not accept the resolution denouncing the forced and slave labor practices. If the United States would support a convention condemning the use of forced labor for economic and political purposes, it would give those people presently under the Communist yoke assurance that we of America are behind them.

Our present inactivity in the field of foreign relations puts various peoples behind the Iron Curtain in the position of having to try to work out their own problems, for which they do not have the means. Stones and pitchforks are valueless, in spite of will, as snowballs against rifle bullets.

We in America who enjoy the greatest prosperity of all should consider our brethren of foreign countries and not leave them to the will of despotic leaders who put Genghis Khan to shame. We have heard about the bloody Russian rulers of the past whose actions horrify us when we read about them. Today in comparison those actions of history are very insignificant alongside of the brutal and inhumane actions of the present communistic government.

I should like to insert at this point a brief article entitled "The Independence Day of Byelorussia":

THE INDEPENDENCE DAY OF BYELORUSSIA

March 25 is the traditional day of Byelorussian independence. Thirty-eight years ago, on that day, a free and independent Byelorussian National Republic was proclaimed in the country's capital, Minsk.

Byelorussia is situated in Eastern Europe, bordering Russia in the north and east, Ukraine in the south, Poland in the west, and Baltic States in northwest. She is about the size of California; some 150,000 square miles with about 18 million people. Both figures are taken with reference to the ethnic boundaries. The officially existing so-called Byelorussian Soviet Socialist Republic, with the Moscow-stamped puppet government, is much smaller in both respects. The republic is a charter member of the United Nations.

In its historic past the Nation was a dominant factor in the Grand Duchy of Lithuania, which in the 15th century established a union, later transformed into the commonwealth, with the Polish Crown in order to strengthen her defenses against the Russian pressure. About 1795 both nations lost their independence on account of their imperialist neighbors. Lithuania (the name later was changed to Byelorussia) became a part of the czarist empire; Poland was divided between Prussia and Austria.

There were continuous efforts on the part of Byelorussians to regain the freedom. In 1812 with the help of Napoleon, in 1863 by armed uprising, but no decisive success could be claimed until the October revolution in Russia offered another opportunity to shake off the chains of slavery. This time by the means of democratic self-determination, by the way, just before the famous principle was announced by President Woodrow Wilson at the Versailles peace conference. Through the coordinated effort of all Byelorussian organizations a national representation, consisting of 1,872 delegates from all corners of the country, convened in Minsk on December 18, 1917. That first all-Byelorussian congress became in fact the constituent assembly of Byelorussia.

Though dispersed later by the armed Bolshevik intervention, nevertheless it adapted just in time a resolution calling for the creation of a free and independent Byelorussian state and elected executive body—Byelorussian National Rada (Council) and its presidium to lead the nation to that great goal. In the execution of that resolution, rada solemnly proclaimed the independent Byelorussian National Republic by the third constituent act of March 25, 1918. The new republic was quickly recognized de jure by all her neighbors except Russia; also by Austria, Czechoslovakia, Georgia, Turkey, and de facto by many other countries.

In fact, the general situation of the country was a desperate one at that time. The war raged at its worst, foreign troops crossed the country back and forth, one occupation succeeded the other. Under such conditions the organization of administration and of the defense of the new state was rendered extremely difficult to the government; no wonder, then, that after a short period of desperate armed resistance, deprived of any assistance or even understanding on the part of western powers, the young republic fell the victim of the newly organized Red army and by the treaty of Riga her territory was divided between Russia and Poland in 1921.

To counteract the claims of the democratic Government of Byelorussian National Republic which migrated abroad, Russian Communists sponsored the creation of the already mentioned BSSR in Smolensk on January 1, 1919.

That union republic is still in existence, but never did the people of Byelorussia accept the government forced upon them. They resist it in any possible way; they know that Byelorussian National Rada (Council) and Government in exile are continuing the struggle against the Communist aggression for final liberation and restoration of the Byelorussian democratic and independent statehood. Also they hope that their perennial craving for freedom and justice will eventually awake more understanding and sympathy in the free West.

The Economic Threat of Soviet Imperialism

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 9, 1956

Mr. SIKES. Mr. Speaker, under permission to extend my own remarks and to include extraneous material, I wish to have inserted in the CONGRESSIONAL RECORD a condensed version of an illustrated lecture given before military and civilian groups last year by Maj. Gen. Arthur G. Trudeau, United States Army, and now appearing in the March 1956 issue of the Military Review, the monthly periodical of the Command and General Staff College at Fort Leavenworth, Kans. General Trudeau is deputy chief of staff for plans, Headquarters, Far East Command and United Nations Command, and is one of the best informed men on world conditions today. I believe that General Trudeau's article on the Economic Threat of Soviet Imperialism is excellent and will be of paramount interest in evaluating the problems of today. It follows:

THE ECONOMIC THREAT OF SOVIET IMPERIALISM

(By Maj. Gen. Arthur G. Trudeau, U. S. Army)

We teach in our Strategic Intelligence School that economic potential is the best single measure of a nation's strategic capabilities. It is sound doctrine, based on the lessons gained from history. Furthermore, the attainment of Soviet objectives is heavily dependent on economic factors. For these reasons the economic basis of Soviet power should be examined.

We can accept the premise that Moscow is still hostile to us, and will continue its efforts to expand the area of Communist influence. At the same time we should, as the President and Secretary of State have said, explore any possibility that leads in the direction of true peace.

With these thoughts in mind, let us examine coldly, analytically, and objectively, the economic means by which the Soviets can pursue their long-range objectives. The economic data which I will use are available to any student of Soviet economics. I have assembled this public information and will present it to you in a form which will enable you to reach your own conclusions.

The capacity of any nation to carry out its national objectives is based on the strength and flexibility of its economy, a proposition to which the U. S. S. R. is no exception. The basic nature of economics is enhanced as applied to the U. S. S. R., for it is the basis of the Communist ideology and movement. I do not believe I have to labor this point with you, for I am sure that from what you have read of the Soviet Union you understand that communism is a doctrine of economics even more than of politics. Let us look to a significant quote to illustrate this. In Lenin's "Report to the Eighth Congress of the Soviets" in 1919, he proclaims:

"Communism is the Soviet power plus electrification of the whole country. Otherwise the country will remain a small peasant country, and that we must clearly recognize. We are weaker than capitalism, not only in the world scene but within the country. We shall see to it that the economic base is transformed from a small-peasant basis into a large-scale industrial basis. Only when the country has been electrified, when industry, agriculture, and transport have been placed on a technical basis of large-scale industry, only then shall we be finally victorious."

I give you the foregoing quotation for its value as an illustration of the key role played by economic development in the Communist philosophy.

U. S. S. R. ECONOMIC STRENGTH

First, let us look at the over-all economic situation of the U. S. S. R. The salient fact which we must face, ruefully if you will, is that the determination expressed by Lenin, as quoted earlier, to see to it that the economic basis of the Soviet Union is transformed from a small-peasant basis into a large-scale industrial basis, has been realized.

The economic strength, expressed as gross national product, of the Soviet bloc is now only one-third of that of the NATO countries. This could be very reassuring, except for two considerations; first, the necessity for taking differences of systems and background into account, particularly the use to which the industrial product is put; and second, the fact that the Communist bloc economies are expanding at a much faster rate than economies of the free world.

With regard to the first of the foregoing considerations, let us bear in mind that the Soviet economy supports a way of life which is entirely different from ours. In transforming her economy from a small-peasant to a large-scale industrial basis, the Soviet Union had concentrated on the expansion of capital goods and heavy industry, "the production of the means of production," as she likes to call it, and the production of those items which will support her armed forces. The result is that while the Soviet people have a standard of living which is far below ours, they also maintain the largest standing army in the world together with powerful air and naval forces, which they do by devoting, over the years, a far larger percentage of their industrial output to the production of military equipment than we have.

With this introduction to the subject of their economy, we will examine some of the most significant aspects thereof in more detail, including their economic capacity to support their miiltary forces in war.

INDUSTRIAL STRENGTH

We will first examine the strength of their industries. The best way to start our examination of the industrial situation is to look at primary items which we regard as an indication of their economic strategic potential: such as coal, steel, crude petroleum, electric power, and primary aluminum.

Steel and oil should be discussed in some detail. Steel is a basic item for industrial output as well as for most munitions production. In 1954 Soviet production was 41 million tons, with 13 million more tons coming from the European satellites. Let us examine this figure in view of Soviet World War II experience.

In 1940, before the Soviets went into the war, they were producing 18 million tons of steel. A large part of the steel capacity was lost as a result of the German invasion; only 9 million tons annually were produced in 1943 and 1944, of which about 6 million tons were devoted to direct military production, including production of 30,000 tanks and 80,000 pieces of artillery per year. Now, of course, we were pouring in tremendous quantities in the way of trucks and weapons for them, but nevertheless it shows you the reasonably small amount they need for military production.

The experience of Germany and Japan in World War II reveals that steel capacity, although not high, was not a limiting factor. Germany fought the war with an average annual production of 20 million tons and Japan with only 5 million tons.

If the Soviet bloc has a real vulnerability in supplying its armed forces in the event of war, it is probably petroleum. The Soviets are now producing about 73 million tons of petroleum per year. At the start of World War II they were producing 31 million tons annually, or less than half the present amount. Production fell to 17 million tons during the height of World War II but was almost enough for wartime needs. Increased mechanization of the army and more aircraft have stepped up war requirements, but oil production has more than kept pace.

These basic items were selected because they are indicative of industrial strength. The economy of the U. S. S. R. consists of many more items and is filled out with modern processing and final manufacturing facilities to create a complete industrial structure. This strong industrial complex, and the fact that Soviet factories are designed for ready conversion to military production, places the Soviet Union in a favorable position to support military aggression.

There is a highly significant and revealing aspect of the Soviet economy indicated by the labor forces. The United States industrial labor force is almost 50 percent larger than the Soviet, even though the United States population is one-third less. The reason is that we have only 7 million persons employed in agriculture, whereas the Russians use 48 million. It means that 1 Russian peasant supports 4 persons with his produce, whereas 1 American farmer supports 22 of us with plenty to ship to other peoples of the world. The steps which the Russians are taking to correct this situation will be discussed later.

The foregoing discussion of basic items of economic potential and the industrial labor force looks rather favorable for us in many ways, except that we must consider to what use the Soviets put these basic industrial resources. The two top priorities for their industrial output are support and equipment for the military establishment and investment in the means of production, which result in a rapidly developing industrial structure.

SOVIET ARMAMENT PRODUCTION

The Soviet Union gives high priority in the allocation of industrial output to armaments production, as well as high priority in the allocation of total economic resources to her military forces.

The Soviets have devoted, over the years, a larger proportion of their productive capacity to support their military establishment than we do. While we are busy producing automobiles and the fuel to propel them, the Soviets have been building up a stockpile of modern weapons which is adequate to equip their large military establishment and still have large reserve stocks.

When we are aroused as we were by Korea, we can produce as much military equipment under conditions short of all-out war as the Russians. Both countries have economic mobilization potential far in excess of present capacities, the United States to a much greater degree in a long pull. Due to the increasing capability of the Soviets to strike this country by air and the fact that a substantial part of our Military Establishment is already deployed on the same land mass with the U. S. S. R., both in Europe and the Far East, our military posture requires a much greater readiness for war at a given moment than has heretofore been required. Our traditional role of an island power has been changed which means that we have taken on those characteristics of continental powers which demand strength in being, on the ground as well as on the sea and in the air.

Contrary to a belief entertained by some that Soviet weapons are inferior in quality, the weapons with which the Soviet Army is now equipped are rugged, dependable, and effective. By our standards some aspects of their weapons, such as rough outside finishes and lack of crew comfort, appear crude, but these features are compensated for by emphasis on more important characteristics, such as firepower, ruggedness, armor protection, and mobility.

SATELLITES' ECONOMIC STRENGTH

Before going any further I will describe the economic realationship of the European satellites and Communist China to the Soviet Union. These East European countries have an economic strength which is a substantial part of that of the U. S. S. R. We estimate that it is one-third that of the U. S. S. R. Now this economic strength is not one that each satellite country can use as it sees fit, but is one that is being closely integrated into the Russian economic structure

Between 1937 and the present time, trade between the Eastern European countries, now known as satellites, and the other countries of the present Soviet bloc rose from 17 percent of the total trade of these Eastern European countries to 75 percent. This illustrates how the satellite countries have been turned from their former western orientation and integrated into the Soviet world, economically as well as politically. The result has been a very substantial accretion to the Soviet economic strength. Even though there may be some question as to the contribution which the U. S. S. R. can realize from the satellites in the form of effective military forces in the event of war, there is no doubt that they can and do control the economy in such a way as to add materially to the Soviet economic strength now.

China is a different story. Whereas the satellites can be counted on in the net to contribute to the bloc economic strength, China's contribution is meager. However, there has been created a trade relationship of mutual benefit to each country. The Soviet Union provides China with military equipment, engineering products, and metals, while China sends to the U. S. S. R. her traditional exports of tungsten, tin, textile fibers, and food products and does the fighting. This integration has been brought about by the natural political and geographical affinity of these two Communist powers.

The above development is well illustrated by the following data on foreign trade. Trade between Communist China and the rest of the Soviet bloc has expanded fivefold since 1950. Whereas in 1938 less than 5 percent of China's trade was with the U. S. S. R. and Eastern European satellites, now 80 percent is so directed. From the above discussion on both the European satellites and Communist China, it can be seen that the Sino-Soviet bloc is striving to become well integrated economically, which reinforces and energizes the political domination in the case of the satellites, and alliance, in the case of the Chinese. Development of this intrabloc trade and self-sufficiency is one of the key elements in Soviet foreign trade policy.

EXPANSION PROSPECTS

Let us now look at the prospects for the future expansion of the basic economic strength of the U. S. S. R. You will remember that the situation looked very favorable for our side considering that United States economic strength is presently three times that of the Soviet Union, except that we

must consider the use to which the Soviets put their resources and productivity.

We have examined one of these uses, the support and equipment of a huge military establishment. We will now take up the other top priority use, and the result thereof, to which the Soviets put their industrial product, namely capital investment. When applied to national economies, capital investment means that part of the national product used to manufacture more capital goods and put up more factories with which to augment production. This production of the means of production has been the foundation of their economic policy ever since it was put into operation in 1928. It has resulted in a fast-growing economy, and it is continuing to do so.

Since the death of Stalin there have been significant changes in Soviet policies, both in internal and external affairs, of which the economic changes have been a basic element. The Russians have placed increased emphasis on agricultural output, primarily by providing greater incentives to the peasant population in the form of goods and payments, channeling greater capital investment to agriculture in the form of farm machinery and fertilizer, and bringing under cultivation new areas of semiarid virgin land in central Asia. An important concern of the Soviet regime is this inadequacy of agricultural production, which has not risen above prewar levels, and has been a critical limiting factor in the growth rate of Soviet labor productivity. The program is aimed at increasing the urban supply of food and other consumer goods and thus raising the per capita labor productivity by means of these incentives.

It is probable that the new program has included a leveling off of military expenditures at the high level attained during the Korean conflict. The significance of this leveling off is palliated by the consideration that plant capacity for conversion or reconversion to military production is growing. Further past and current levels of investment in the military sectors now permit production of large quantities of new modern military equipment. The new program, from all angles, should strengthen the economy, including its military sector, in the long run.

Our evaluation of the significance of present economic trends in the Soviet Union should be made against the background of the "use pattern" of resources over the past several years.

INDUSTRIAL GROWTH

This pattern revealed has great significance. Although the consumer sector has consistently received a relatively low allocation of economic output, yet the regime has managed to obtain political stability and improve labor productivity. The economy is oriented toward maintaining a relatively large apportionment of its output to support of the military establishment and to capital investment. With an expanding economy there is room to maneuver and change emphasis depending on the demands of any given period.

Let us now examine briefly the course of economic development in the U. S. S. R. Industrial production must be discussed, for it is the most meaningful in terms of accomplishment, and our knowledge thereon is sufficiently complete and firm to permit its measure.

United States industry has grown at a rather steady rate since 1865 with short-term upward surges occasioned by war or booms and short-term depressions, which in the case of the 1929–32 depression was severe.

In Russia substantial progress was made in the period between 1890 and World War I, thereby creating the industrial proletariat from which the Bolshevik revolution drew a part of its strength.

The period 1921–27 shows a high growth rate, which is deceptive in that it consisted of putting existing facilities back into operation. From 1928, when the first 5-year plan went into effect, real accomplishment was attained, with an average annual growth rate of 11.4 percent up until 1940. The Nazi invasion in 1941 caused a setback, for much of the producing area was overrun. The period 1944–46 shows a depressed effect in the aggregate caused by the difficulties of reconversion and relocation of industries, although steel production and some other basic industries raised their production. From 1948 to 1953 production regained its high prewar average annual growth rate of 11.4 percent with a tapering off toward the end of the period.

It has been shown how the Soviet economic strength is now about one-third that of the United States, that it is expanding rapidly, and that the Soviets have been producing more military equipment than we, except during the Korean conflict. We have seen that the Russians are attempting to create an integrated Soviet bloc economy. We note that the post-Stalin regime is redirecting the economic effort to meet the demands of the long pull.

SOVIET FOREIGN TRADE

We will now undertake an examination of Soviet foreign-trade policies in order to see how they affect the nature and development of the Soviet economy, and to what extent such trade with non-Communist countries can further their objectives.

The traditional objective of Soviet trade is best expressed in the words of the Soviet economist, Mishustin, in his book, The Foreign Trade of the U. S. S. R., who states:

"The main goal of Soviet import trade policy is to utilize foreign products, and above all, foreign machinery, for the technical and economic independence of the U. S. S. R. The import policy of the U. S. S. R.," who states:

"The main goal of Soviet import-trade policy is to utilize foreign products, and above all, foreign machinery, for the technical and economic independence of the U. S. S. R. The import policy of the U. S. S. R. is so organized that it aids the speediest liberation from the need of import."

In the great land mass of the Sino-Soviet bloc are found practically all the minerals necessary for the development of an advanced industrial economy. These minerals have not been completely developed, but dependence on outside sources in relation to total consumption is small and is limited to a very few items.

East-West trade consists primarily of an exchange of western capital goods, industrial raw materials, and services, for coal and agricultural, forest and mineral products from the bloc. The West sends to the bloc not only industrial raw materials but also some items produced by advanced technology and by labor-saving manufacturing facilities and skilled labor and receives in return mainly commodities requiring only limited capital equipment and unskilled labor. The value of these imports to the Soviet Union is derived more from the nature thereof than their volume, which is not great.

For example, the Soviet bloc depends upon imports for only a small percent of its total supply of machinery and equipment, yet within that small percent may be certain types of items which the bloc urgently needs. Thus some specific items of import, although representing a minor share of total imports and an insignificant fraction of the gross national product of the bloc, may be of much greater importance to their economy and a much greater threat to us than the money values suggest.

An important aspect of Soviet import trade objectives is the acquisition of advanced technological products in order to exploit the information gained therefrom in developing their own engineering products. An outstanding example of this was the Soviet purchase of the British "Nene" engine after the war, which advanced their techniques in the development of jet engines by perhaps 5 years.

We see then that the Soviet Union is not yet a great trading nation, and that she has engaged in foreign trade outside the bloc mainly to the extent necessary to strengthen and supplement her basic industrial structure.

EAST-WEST TRADE PATTERN

The foregoing description of the Soviet foreign trade has been concerned with traditional patterns and the dominant characteristic of present patterns. In 1953 and 1954, however, there was a deviation of Soviet trade policy from the traditional one described earlier. Along with an increase in the level of trade with the West, there was intensified activity in other aspects of Soviet bloc economic relations with the free world. The number of trade agreements between the Soviet bloc and the free world increased markedly. Soviet automobiles are being sold in Finland. They may be and are inferior to ours but the point is that to a Finn a Soviet automobile he can actually buy is preferable to a horse and buggy.

Soviet particpation in international trade fairs increased. Soviet-bloc missions were active in establishing new contacts in various parts of the free world. There is no indication that these activities will slacken. One aspect of the developments of 1953 and 1954 that may be expected to continue is the increased interest of Soviet-bloc countries in the less developed countries of Asia and Africa, and to a lesser degree, Latin America, as illustrated by offers of technical aid.

The composition of recent trade has shown some deviation from the traditional postwar pattern in that the Soviet bloc has exported petroleum, manganese, and chromite, and has even agreed to export industrial machinery. Associated with the Soviet bloc consumer goods emphasis in 1953 and 1954 and the poor harvest of those years, increased quantities of food and consumer goods have been imported.

EXPLOITING TRADE CONTROLS

The Soviets have not been slow to exploit the psychological impact of the wedge of proclaimed faith in free trade in order to press for relaxation of strategic trade controls, charging that they were arbitrary and unreasonable barriers erected by the United States to prevent the mutually beneficial exchange of goods between East and West. This tactic could be of great potential effectiveness in achieving the bloc's primary trade objective of obtaining the unrestricted flow of strategic equipment and materials. The goal of unrestricted trade would permit an increase in the flow of strategic goods desired for the development of the internal bloc economy. They will seek to exploit this limited expansion in achieving local political advantage, for political activity and subversion are abetted by economic activity. Soviet capability to change world trade patterns is now limited. However, the new element which will appear on the scene is that of the fast-growing Soviet economy. As the Russians raise their economic capacity they will be able to manufacture goods which will compete with Western products in price, and, being able to control the use of these goods, they can offer them for sale on the export market, while withholding substantial amounts from the domestic scene. Sufficient raw materials could be extracted from their vast resources so that they could create a surplus for export purposes.

In short, the Soviets will have an increased capability to pursue the objectives designed to cause relaxation of present trade controls and altering the world trade pattern. Of

special signigficance is their ability, even now, augmented as their economy grows, to concentrate their effort at economic penetration of a particular area. In the application of power you do not dissipate your efforts in all directions and attack all along the line; you aim your efforts at specific targets for telling effect. It should be kept in mind that economic penetration of an area normally leads to more effective political and subversive activity.

Possible targets for exerting economic pressure are those countries which now carry on considerable trade with the Soviet Union: for example, Finland, Austria, Egypt, and Iran.

Also counted among these vulnerable areas are the Middle East, Southeast Asia, and Africa. You can see why it is of vital concern to the West that we intensify our efforts to improve the economic lot of underdeveloped areas, in part, so as to lessen the scope for politically inspired economic attention of the Soviet bloc.

This applies to the vast and important area of Latin America, to our south, as well as to Africa and those critical areas in Asia contiguous to the Iron and Bamboo Curtains.

THE CHALLENGE BEFORE US

In summary, we need to give careful attention to not only the ideological challenge but to the economic challenge that lies before us, backed as it is by powerful military forces and subversive political activity conducted on a scale never before known.

Soviet trade proposals need the closest scrutiny as they seek principally to complement her present requirements to secure a vast expansion to her industrial base and increase here military potential despite the pitiful condition under which her own and the satellite peoples are forced to live.

The free world would welcome the removal of those barriers imposed by the Kremlin that prevent freedom of thought, speech, travel, or the press. While we should work hopefully for such goals, we would be less than naive not to fully appreciate the challenge before us and not meet it vigorously whenever and wherever it appears.

Our salvation will depend on our alertness and our awareness of these serious problems now before us.

Tightening Up Our Fraud Laws

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. KEATING. Mr. Speaker, the Attorney General has recommended legislation to permit prosecution of fraudulent stock promoters who circumvent the present law by operating from foreign countries. I have today introduced a bill to carry out this suggestion with one modification.

This bill is designed to close a loophole in the present law which limits prosecution to frauds involving only interstate wire, radio, and television communication. It would extend this coverage to foreign communications as well.

This legislation was prompted by a case last year in which it was alleged that a fraudulent scheme was carried out by means of telephone communication from Mexico to Los Angeles. Because of the limitation of the present statutes, the culprits escaped prosecution.

This bill will eliminate this shortcoming. It will not only cover foreign communications by wire, radio, and television, but will also remove any doubt as to the applicability of the statute to communication between a State and a Territory or between a State and the District of Columbia.

The modification in the Attorney General's recommendation would raise the penalty for these interstate and foreign swindling crimes from $1,000 to $10,000. The alternative of 5 years in prison, or both a fine and prison term, remains.

It seems to me that the fine suggested by the Justice Department is not sufficiently severe. We must remember that in many instances these chiselers are playing for such high stakes that the $1,000 fine the Attorney General proposes will not deter them. Therefore, my bill will impose a fine of $10,000, which is more in line with the magnitude of the operations of these gyp artists.

The penalty of $10,000 or 5 years in prison, or both, will go a long way toward protecting segments of our population who have been duped in the past. In so many of these cases the victims have been newcomers to our shores, whose meager knowledge of our language was parlayed by swindlers for gain, or involved those who could least afford to lose their money to fraudulent manipulators. The threat of the increased penalties will, I hope, serve to deter many of these heinous promoters.

I hope for speedy action on this measure which will be another step forward in our never-ending crusade against the crooks and connivers who try to defraud the American people.

A copy of the bill follows:

A bill to amend section 1343 of title 18, United States Code, relating to fraud by wire, radio, or television

Be it enacted, etc., That section 1343 of title 18, United States Code, is amended to read as follows:

"SEC. 1343. Fraud by wire, radio, or television: Whoever, having devised or intending to devise any scheme or artifice to defraud, or for obtaining money or property by means of false or fraudulent pretenses, representations, or promises, transmits or causes to be transmitted by means of wire, radio, or television, communication in interstate or foreign commerce, any writings, signs, signals, pictures, or sounds for the purpose of executing such scheme or artifice, shall be fined not more than $10,000 or imprisoned not more than 5 years, or both."

The Angry South

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 20, 1956

Mr. UDALL. Mr. Speaker, it is more apparent each day that the chief hope for an orderly solution of the school desegregation problem in the South lies in the calm leadership of its churchmen, newspaper editors, and educators—men who are not subject to intolerable political pressures.

Typical of this leadership is a sobering yet hopeful article which appeared in the April issue of the Atlantic Monthly and was written by Ralph McGill, editor of the Atlanta Constitution.

This is a balanced presentation. It does credit to the South—and to the cause of courageous journalism. One hopes that the Ralph McGills will continue to speak out and that their voices will be heard above the din of controversy.

Mr. McGill's article follows:

THE ANGRY SOUTH
(By Ralph McGill)

Southerners trying to be fair are confronted daily with the many and frustrating complexities of the racial problem in its most aggressive form. The newspaper man or woman in the deep South who, as carefully and as objectively as his or her talents permit, produces critical opinion experiences an immediacy of thermal reaction. To some he has fouled his own nest, sold out to Yankee dollars, betrayed his people, and so on. A cross may be burned in his yard, or his windows broken by stones thrown in the night. He personally is pilloried, vigorously and libelously, by political demagogues. He encounters some support, and there is perhaps one constant satisfaction: He knows he is being read.

Now and then, he indulges in a Walter Mitty nostalgia for the old days as pictured in the literature of once-upon-a-time. There was a time when being a southerner could be made into a pleasant semiofficial profession if one rehearsed it a bit.

But not now. In May 1954, the trumpets of the nine black-robed Justices in the Greek temple on the Potomac blew down the already weakened walls of political feudalism in the South. There long will be fighting in the ruins, but it will be guerrilla stuff and its denouement is sure. When the walls crumbled, the Humpty Dumpty of a convenient, oft-invoked regional concept of States rights fell, too. Even if apostles of this doctrine, which was as malleable as sculptor's clay in the hands of its many interpreters, were to put Humpty Dumpty back together again, there is no wall on which to set him. He fell with the walls, not from them.

The South of myth, reality, and paradox was beginning noticeably to change its internal structure in the mid-thirties. The region had not at all recovered from the boll weevil plague when the world depression came. The disaster of the weevil had been even worse. It was not so recognized nationally save by insurance companies which ended up holding mortgages on as much as three-fourths of the property in some of the major cotton counties. In these counties some 200 bales of cotton were produced in 1920 on plantations which a year or so before had produced 2,000 bales. Banks failed, and there was no Government policy to reopen them. Manor houses emptied. The ruins of many still stand, never again occupied. The tenant and sharecropper cabins began to be deserted. Their doors sagged with the passing years, and the winds blew a requiem through them for the lost dreams of men and their families, white and colored, who were going to "Dee-troit" to the already burgeoning automobile plants, and to steel plants in "She-cargo" and Pittsburgh. On top of all this came the great depression.

Even the more insensitive should have known that something was amiss in the depression years. The cotton economy was wrecked and would never return. Ahead was the need for new crops. Machines were to replace the many hands and the slow-plodding mules. That would be change enough. But there came, too, the many Government

agencies for relief, for rehabilitation of soil, and for the construction of roads, schools, bridges, and public buildings. In the rush for aid and the almost greedy acceptance of it by a region long short of capital, the strength of States rights politics was dissipated. In a sense it was bartered away. In this period, too, the South abandoned the two-thirds rule which had given it a veto on the doings of the national Democratic convention. This was given away, a fact which later caused great regret in the smoke-filled rooms.

But the walls of States rights regionalism were undermined most energetically by those who now protest the most, the deep-South politicians at the State and local level who head up or support the citizens' and States' rights councils, and other variations on the theme. It was they who most encouraged and accompanied the entrepreneurs who went North by plane and train in search of new industry. Some tempted this new industry with low taxes or no taxes, with free land or cheap land. Others offered intelligently prepared blueprints of the water supply, skilled labor, transportation, and pointed with pride to the stability of their local governments.

So it was that change came slowly, yet steadily, as did the new industry. It was accelerated by a desire to decentralize; it was quickened by war and by the further urge to disperse industrial concentrations once the A- and H-bombs came into being; most of all, it was hastened by the job hunger of a region long short of employment.

It was, and still is, a puzzling fact that most of those who headed, or were members of, delegations seeking new enterprises never saw themselves as carriers of the virus which was to destroy the status quo in their towns and communities—and also, therefore, the old way of life in the South. They brought new payrolls to their towns. Businesses boomed and new ones came. The delegations basked in the sun of progress. But still they fretted. Things are not the same, they said, shaking their puzzled heads. The organizers and unions came. The Negroes were encouraged to register and vote. The PTA and the community meetings began to hear new and protesting voices about the crowded schools, the town's municipal services. The political contests began to be less and less sure of result. All the while, though deploring the change and declaring to visitors that things were not as they had been, the delegations never saw themselves as makers of the revolution. They sought with a kind of desperation to maintain the status quo—all the while laboring to bring new industries and payrolls which could only accelerate the changes.

II

Because much of the South is still rural, and legislators from agricultural communities still dominate most legislatures, the effect of urbanization has come much more slowly to Southern politics than to politics in the industrial East. But its influences may be seen and felt.

Southern politics perhaps has been more consistently lacking in idealistic or progressive imagination, and therefore has been more pragmatic than politics elsewhere. Its leaders have more often said no than yes. The South joined the Populist movement, but did not originate it. Woodrow Wilson, who was Southern-born, aroused some of Thomas Jefferson's liberalism and idealism. His own stern Calvinism matched the religious climate of most of the South, and his political morality became, in a sense, also religious morality. But it did not originate in the South. Southern politics chose to follow Grover Cleveland, Woodrow Wilson, and Franklin D. Roosevelt's New Deal. It rejected, or was indifferent to, Harry Truman's Fair Deal, and Adlai Stevenson's candidacy. Despite the competence, even brilliance, of some of its Senators and Congressmen, the South, since the days of the Virginia Dynasty and of Andrew Jackson, has not offered leadership which the Nation has followed. It could not because it was committed to a hard-forged regionalism.

It was in the last of the Roosevelt years that regionalist politicians began to see that they would never be able to win national acceptance of their social and political theories. Some of what they believe was good and just. But they stubbornly and uncompromisingly offered a package. The Nation would not buy it, either in the markets of the national conventions held by the two parties or in the Congress.

Out of this refusal came the Dixiecrat revolt of 1948 in which STROM THURMOND, now United States Senator from South Carolina, carried four States. Some commentators compared it to Herbert Hoover's cracking of the so-called solid South in 1928. It was not at all related. Dwight D. Eisenhower carried five traditionally Democratic States. In part, he was able to do so because of a belief that he was, in considerable degree, a States-rights man in the southern meaning of that oft-employed phrase. Many southerners believed he would, in particular, leave the issue of segregation in education to the States. When, through the office of the Attorney General of the United States, the administration filed a brief before the Supreme Court asking an end to segregation, the disenchantment among the unyielding Southern political leaders was complete.

But even before the Court's decision in May 1954, the diagnosticians of southern political distemper could, with confidence, make one entry on their charts. It was that, for a long time to come, a very considerable portion of the South would be an agin-the-White-House political force. Since neither national party was willing, or indeed able, to give this Southern leadership what it wanted, it would not greatly matter which party was in the mansion on Pennsylvania Avenue. The Deep South would, for the most part, be against the occupant.

The strength of these States will be used to bargain collectively at the national conventions with the threat of an Independent Party as alternative to rejection of their demands.

The Court's decision, which for the first time split the traditional solidarity of the South on the racial issue, assured this future aspect of deep-South politics. The antisegregation issue was not, paradoxically enough, so much of a shock. In their secret hearts the most ardent advocates of the status quo knew that the Constitution of the United States could no longer be interpreted to mean one thing for one citizen and an opposite thing for another. Many had come to see, though they would admit it only privately, that if the southern interpretation of States' rights meant such an inequality in citizenship, then that doctrine had no slight chance of winning national support. In 1954 any political device which could make one man less a citizen than another, or give one American child less opportunity than another, was not merely impotent but was regarded by most Americans as politically immoral. States' rights remained firmly imbedded in the Constitution, but they no longer meant what some political leaders said they did, any more than they meant in 1861 that there was a States' right of secession. All this would be granted in private by men who declared they would fight it to the death in public.

III

The more angry and defiant among deep-South politicians, being obsessed with politics of the past, had ignored what had been occurring in the South with the slow, steady change to an urbanized society. They also had missed the meaning of the fact that for years substantial numbers of Negroes had been attending the professional schools in Texas and Arkansas, and that in Tennessee and North Carolina there had been admission of one or two such students. They could not understand it when there was no immediate fusion of all the Southern States and a hedgehog regional opposition to the Court's edict. Tennessee's 4-year plan for integration was denounced by the more angry as the sinister influence of politicians seeking the labor and Negro vote. And the more rabid elements from the town, not from the campus, have had their way at the University of Alabama.

But many school districts in Missouri, Oklahoma, and West Virginia moved to desegregate, as did isolated communities in Arkansas. The University of North Carolina became the first Southern State university to admit Negroes to the undergraduate school, although a similar decision by the University of Louisville had preceded it. And when great Texas herself announced a plan for gradual compliance with the Court's decree the reaction was one of furious incredulity. Immediately there was a quick hardening of opposition in the deep South and in Virginia. Some of these States legislatively and emotionally are prepared to abolish their public school system. They can count on support from a majority of unhappy but agreeable people.

Nor was this unexpected. Back of the cotton States in the Deep South is a history of generations of political exploitation of the racial issues and the closely associated fact of larger percentages of Negro population. Inflammatory and violent agitation of racial politics in the cotton South dates back to Pitchfork Ben Tillman, of South Carolina, and Tom Watson, of Georgia, both of whom had really profound regional influence down to our present day. They have never lacked heirs and imitators. They and the cumulative effect of their successors are factors in the quick hardening of Deep South opposition. A region, like a nation or a man, is a product of its history and traditional environment. Deep in the instincts of many southerners is fear of what might happen "when the children all drink out of the same bucket." Many of these people are entirely sincere when they say that nonsegregation means a mongrelized race. They will die before they will agree, they say. And they mean it.

It must not be assumed that this position is an evasive device. tI is honestly held. It does no good for a minister, a newsman, or an editor, seking to discuss the problem objectively, to suggest that the North has had no segregation, save the considerable degree obtained by the geographic facts of residence and by some judicious gerrymandering of school districts, and that there has been no mongrelization. If it further be suggested that this is, in a sense, an affront to the southern people in that it suggests that only separation maintains their racial integrity, the result is unreasoning anger. The sociologists say that while the number of interracial marriages is up because the population is, percentagewise the number is down. That there is much less miscegenation than there was 20 or 30 years ago is not denied. With increased education and opportunity the Negro has, like anyone else, developed more and more racial pride. But it is this one issue of the possibility of intermarriage which most concerns the Deep South. That the reasoning is not always sound does not at all detract from the strength of its belief or fear. When emotions dominate, reason plays little part. He who dismisses this attitude as a mere prejudice does neither himself nor the great American problem any good.

Northern editorialists may thunder at it and reason it away. But the southern newspaper editor or writer of any sensivity, who knows his people, will not, though he disagree with them, mock or denounce them.

It is a part of his duty personally and professionally, since he knows the path his region has taken, to seek in every way to ameliorate the problem, knowing it cannot be "solved." Few great problems are solved. Persons of good will keep on ameliorating them until finally they cease to be major problems.

Yet another force in the present situation is that of religion. The South, long ago labeled the Bible Belt, has always been a strongly churchgoing region, with heavy Calvinist overtones. It has prided itself on being Christian. To some that Christianity, like States' rights, occasionally took on strange interpretations. "Before the war," for example, many honestly persuaded themselves that Christianity endorsed and made slavery obligatory. Their spiritual descendants today declare that segregation is justified by Christian principles. The religious attitude of the average Citizens' Council member is perhaps well expressed by an apocryphal story. At a meeting of one of the newly formed Citizens' Council groups, to discuss the school segregation issue, a member proposed asking a well-known minister to advise them. "There ain't a bit of use sending for him," said the chairman. "All he will do is give you the Christian solution."

Nonetheless, the Episcopal, Catholic, Presbyterian, Methodist, and Lutheran churches have proclaimed a Christian policy in support of desegregation. So have many Baptist congregations and ministers (this church has no central authority).

The southerner, looking objectively at his region, would be happy if he knew how many persons there are who are willing to give the Supreme Court's decision an honest try. He suspects, on the basis of his knowledge of his people and their Christian faith, that the number is considerable. He knows also that many of these would not willingly undergo a public display and testing of their feelings.

Another development which the southern newspaper writer honestly seeking to portray his region must face is the demand that "our side" be vigorously presented. Many people insist that it is not. Some argue that the fact of determined and unmoved deep-South opposition is not known to the Nation. "Tell them we will die rather than yield" is a somewhat common statement. "Don't they know there will be violence?" is another question which must be dealt with and not considered as the cry of a crackpot. There may be some violence, but there are no signs it will be as bad as the more fearful or angry declare.

It is often asserted today that the former "excellent relations" between the races have deteriorated and will worsen. This is, in a general sense, true, but it is more applicable to the smaller cities and towns and the rural areas. And what the average southerner honestly does not know is that even the average Negro thought there was much lacking and much that was unfair in the excellent relationships that did, and do, exist. Many a sincere, average deep-South southerner does not know, or refuses to admit, that world forces are at work in the American race problem as they are in Asia and Africa. Somehow, to him, his present harassments are all a sinister business brought on by an organization called the NAACP. He feels that a proper government would put it in jail or order it to go away, and then everything would again be as it was. One of the more unrewarding tasks of a responsible southern journalist is to interpret local events, when he can, in terms of the world picture.

The plain and really sad truth is that it is difficult to put together "our side" as the more disturbed and angry Southerner means the phrase. The various forms of citizens' councils, which are largely secret, are at present committed to "every legal method" of blocking desegregation. This is the most concrete form of opposition. But as a matter of fact these deeply disturbed persons represent a great accumulation of resentments, of seeming injustices. They want an interpretation of the constitutional phrase about reserving to the States those rights not reserved to the Federal Government. They have a passionate conviction that Southern traditions are sound and right, and that the North is wrong. The average Southerner really believes that everyone at least privately thinks that separation of the races by law is best for both. His political leaders so often have assured him they would prevent all this from happening. Worse, they were positive it would never happen. Now that it has, they can do nothing to justify their failure except denounce the White House, the Court, and the "radicals." The Southerner wishes someone would put all this into compelling form as "our side." This average Southerner with a deep sense of injustice is not a "bad" man. He wants to be liked. He wants it understood he loves his country—and he does, as he has proved in war and peace. But at present he feels that his country does not love him. And he is sad, angry, resentful, and defiant.

Much of the reporting on the segregation issue and the variety of reaction in the South has contained elements of joylessness and the sense of guilt which occupies so many pages of Southern novelists. It is difficult to see the gleam of the other side of the metal, but it is there. Despite the deep anger, the ranking, the violence, and the pious circumvention, the Southerner who looks in love and hope at his region senses somehow that the great loyalties and deep friendships which the two races have known, will bring his region through. There is evil, but there also is much good. And he does not feel Pollyannish in believing that there is more good than evil in the people of the South, colored and white, just as there is more good than evil in all peoples everywhere.

He will continue in this hope, even though the sound of guerrilla fighting in the tumbled-down walls of the way of life and politics that was, all but drowns out his words.

Clarifying Decision by United States Supreme Court Holds Immunity Act of 1954 by United States Congress Constitutional

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 9, 1956

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do I present for the reading and consideration of all of my colleagues the text of an editorial in the Washington Post for Wednesday, March 28, 1956, bearing on the subject of the recent decision of the United States Supreme Court in the case of William Ludwig Ullmann, petitioner against United States of America. On writ of certiorari to the United States Court of Appeals for the Second Circuit, March 26, 1956, No. 58, October term, 1955. Since the enactment of the Immunity Act of 1954 by Congress and which was held constitutional recently by the Supreme Court of the United States, the House Un-American Activities Committee in public session, upon inquiry of several witnesses in different parts of our Nation as to whether or not such witnesses would testify if granted immunity, stated no witness has finally accepted the offer and almost all of them, by advice of their council, have declined the offer of immunity on the grounds that it was probable the Immunity Act of 1954 would be held unconstitutional by a final decision of the United States Supreme Court. But now that our highest Court has declared this important act constitutional it will clear the way for the congressional committee to very much facilitate their very difficult and very important assignments committed to them by the enactment of Congress in the field of subversive activities. I have in mind, for instance, Public Law 601, which created the House Un-American Activities Committee, of which I am 1 of the 9 members.

The editorial follows:

RIGHT OF SILENCE

By a vote of 7 to 2, the Supreme Court has ruled that the so-called right of silence is far from being absolute. More specifically, the Court decided that, if a witness refuses to testify on grounds of self-incrimination and is thereafter granted immunity from prosecution in connection with what he might disclose, he can be compelled to testify before a grand jury of court regarding any interference with or peril to the national security. Agreeing with both the district court and the court of appeals, the Supreme Court affirmed the contempt conviction of William Ludwig Ullmann for refusing to tell a grand jury whether he and other persons about whom he was questioned were members of the Communist Party.

Justice Douglas' dissent, in which Justice Black joined, was sufficiently vigorous and appealing to make the case historic. The dissenters insisted that the immunity which Congress authorized the Department of Justice to give balky witnesses in such cases in the act of 1954 is not complete. If a Communist is forced to confess his allegiance, they contended, he thereby loses the right to hold a Government job, to be employed in any defense facility, to hold office in a labor union, and to apply for a passport. Justices Douglas and Black believe that the fifth amendment was intended to protect persons against penalties of this kind as well as against sentences imposed by courts in criminal cases. The majority, with Justice Frankfurter speaking for the Court, clung more closely to the literal meaning of the fifth amendment command that a person shall not be compelled "in any criminal case to be a witness against himself."

The dissenters go so far as to assert, as did Justice Field in *Brown* v. *Walker*, that "the fifth amendment was designed to protect the accused against infamy as well as against prosecution" and that the Constitution "places the right of silence beyond the reach of Government." However desirable that policy might be, it is difficult to find it in the language and history of the fifth amendment. We think the Court is on firm ground in keeping the privilege of refusing to testify against one's self directly related to criminal prosecution. As one member of the Court has said, the fifth amendment was designed to save a man's neck, not his reputation.

The court has removed one of the chief arguments made against the Immunity Act in the past. Ullmann had contended that, in any event, the Federal Government could

not grant him immunity from State prosecution for what he might disclose in forced testimony. The Court ruled that the language of the statute is broad enough to forbid State prosecution in such cases and that Congress had ample authority to assert such power in the interests of national defense.

In any well-ordered society the so-called right of silence has to be reconciled with the rights of justice and security. The courts would operate under a severe handicap if citizens could withhold their testimony in vital cases after the requirements against self-incrimination have been satisfied.

Likewise, the interests of national defense may often require disclosures that individuals are loath to make. Certainly the power to force testimony should be sparingly used, but it would not be wise to sanctify a right of silence (beyond the constitutional requirement) in such a way as to leave Congress no flexibility in balancing the claims of justice and national defense with those of privacy.

A reading of the full text of this important opinion of the Court as delivered by Mr. Justice Frankfurter for the majority, which opinion was dissented from by Mr. Justice Douglas and Mr. Justice Black, it appears to me this clarifies one of the questions which, since the enactment of the Immunity Act of 1954, by the United States Congress, Sixty-eighth United States Statutes at Large, page 745, title 18, United States Code, Supplement II, concerns we members of the Un-American Activities Committee. In several cases witnesses before us, when it was suggested by the committee to said witnesses that if they would answer the question fully they would be offered immunity, the witnesses and their lawyers have taken the position that the matter of the constitutionality of the Immunity Act of 1954 was pending before the United States Supreme Court and that they would not state as to whether or not they would answer the question fully and accept any offer of immunity from prosecution until the Supreme Court had delivered its opinion as to whether or not said Immunity Act was constitutional. Several of the witnesses, through advice of their legal counsel present in the hearing room, have stated they did not believe that the Immunity Act, enacted by Congress in 1954, would obviate them from procedures in State courts, even though it might possibly do so in Federal courts.

However, a reading of this decision makes it clear that said Immunity Act of 1954 is constitutional. Also, that it does apply to State courts as well. Paragraph (c) of the Immunity Act provides as follows:

(c) Whenever in the judgment of a United States attorney the testimony of any witness, or the production of books, papers, or other evidence by any witness, in any case or proceeding before any grand jury or court of the United States involving any interference with or endangering of, or any plans or attempts to interfere with or endanger, the national security or defense of the United States by treason, sabotage, espionage, sedition, seditious conspiracy, violations of chapter 115 of title 18 of the United States Code, violations of the Internal Security Act of 1950 (64 Stat. 987), violations of the Atomic Energy Act of 1946 (60 Stat. 755), as amended, violations of sections 212 (a) (27), (28), (29), or 241 (a) (6), (7), or 313 (a) of the Immigration and Nationality Act (66 Stat. 182–186; 204–206; 240–241), and conspiracies involving any of the foregoing, is necessary to the public interest, he, upon the approval of the Attorney General, shall make application to the court that the witness shall be instructed to testify or produce evidence subject to the provisions of this section, and upon order of the court such witness shall not be excused from testify or from producing books, papers, or other evidence on the ground that the testimony or evidence required of him may tend to incriminate him or subject him to a penalty or forfeiture. But no such witness shall be prosecuted or subjected to any penalty or forfeiture for or on account of any transaction, matter, or thing concerning which he is compelled, after having claimed his privilege against self-incrimination, to testify or produce evidence, nor shall testimony so compelled be used as evidence in any criminal proceeding (except prosecution described in subsec. (d) hereof) against him in any court.

Quoting from the Court's decision on this point, it was said:

Since the Court's duty under section (c) is only to ascertian whether the statutory requirements are complied with by the grand jury, the United States Attorney, and the Attorney General, we have no difficulty in concluding that the district court is confined within the scope of "judicial power." (*Interstate Commerce Commission* v. *Brimson*, 154 U. S. 447.)

Petitioner further argues that the immunity is not constitutionally sufficient so long as a witness is subject to the very real possibility of State prosecution. He urges that the statute does not, and constitutionally could not, grant such immunity. The immunity portion of the statute contains two parts. The first prohibits prosecutions and is worded virtually in the terms of the 1893 act. The second makes explicit that the compelled testimony shall not be used against the witness in any proceeding in any court. Such a clause was construed in *Adams* v. *Maryland*, 347 U. S. 179, to apply to State courts. In *Brown* v. *Walker*, it was urged that the prohibition against prosecution did not grant protection against prosecution in the State courts. First finding that Congress could constitutionally provide such immunity, the Court then interpreted the statute:

"The act in question contains no suggestion that it is to be applied only to the Federal courts. It declares broadly that 'no person shall be excused from attending and testifying * * * before the Interstate Commerce Commisison * * * on the ground * * * that the testimony * * * required of him may tend to criminate him,' etc. 'But no person shall be prosecuted or subjected to any penalty or forfeiture for or on account of any transaction, matter or thing concerning which he may testify,' etc. It is not that he shall not be prosecuted for or on account of any crime concerning which he may testify, which might possibly be urged to apply only to crimes under the Federal law and not to crimes, such as the passing of counterfeit money, etc., which are also recognizable under State laws; but the immunity extends to any transaction, matter, or thing concerning which he may testify, which clearly indicates that the immunity is intended to be general, and to be applicable whenever and in whatever court such prosecution may be had" (161 U. S. at 607–608).

The report of the Committee on the Judiciary of the House of Representatives supports the broad interpretation of the act before us:

"Even though the power of Congress to prohibit a subsequent State prosecution is doubtful, such a constitutional question should not prevent the enactment of the recommended bill. The language of the amendment * * * is sufficiently broad to ban a subsequent State prosecution if it be determined that the Congress has the constitutional power to do so. In addition, the amendment recommended provides the additional protection—as set forth in the Adams case, by outlawing the subsequent use of the compelled testimony in any criminal proceeding—State or Federal.

"By the use of these two distinct concepts, the committee believes that the fullest protection that can be afforded the witness will be achieved." House Report No. 2606, 83d Congress, 2d session 7.

Petitioner questions the constitutional power of Congress to grant immunity from State prosecution. Congressional abolition of State power to punish crimes committed in violation of State law presents a more drastic exercise of congressional power than that which we considered in Adams. In that case, only the use of the compelled testimony, not prosecution itself, was prohibited. Here the State is forbidden to prosecute. But it cannot be contested that Congress has power to provide for national defense and the complementary power "to make all laws which shall be necessary and proper for carrying into execution the foregoing powers, and all other powers vested by this Constitution in the Government of the United States, or in any department or officer thereof. United States Constitution, article I, section 8, clause 18. The Immunity Act is concerned with the national security. It reflects a congressional policy to increase the possibility of more complete and open disclosure by removal of fear of State prosecution. We cannot say that Congress' paramount authority in safeguarding national security does not justify the restriction it has placed on the exercise of State power for the more effective exercise of conceded Federal power. We have already, in the name of the Commerce Clause, upheld a similar restriction on State court jurisdiction, *Brown* v. *Walker*, 161 U. S., at 606–607, and we can find no distinction between the reach of congressional power with respect to commerce and its power with respect to national security. See also *Hines* v. *Davidowitz*, 312 U. S. 52.[1]

Petition also urges that if *Brown* v. *Walker* is found nondistinguishable and controlling, then that case should be reconsidered and overruled. He also urges upon us a "return" to a literal reading of the fifth amendment. *Brown* v. *Walker* was the second case to deal with an immunity statute. Four years previously, in *Counselman* v. *Hitchcock*, 142 U. S. 547, a unanimous Court had struck down the predecessor to the 1893 statute because the immunity granted was incomplete, in that it merely forbade the use of the testimony given and failed to protect a witness from future prosecution based on knowledge and sources of information obtained from the compelled testimony. It was with this background that the 1893 statute, providing complete immunity from prosecution, was passed and that *Brown* v. *Walker* was argued and decided. As in Counselman, appellant's numerous arguments were presented gy James C. Carter, widely acknowledged as the leader of the American bar.[2]

---

[1] We need not consider at this time petitioner's claim that immunity is not complete and the statute unconstitutional because he can be prosecuted later for participation in a continuing conspiracy. Congress has the power to provide, and has provided, that immunity from prosecution which the Constitution requires. See *Heike* v. *United States*, 227 U. S. 131, 142.

[2] He urged that the statute left the witness in a worse condition because it did not abrogate the crime for which he was given immunity; that the constitutional safeguard goes toward relieving the witness from the danger of an accusation being made against

The Court was closely divided in upholding the statute and the opinions reflect the thoroughness with which the issues were considered. Since that time the Court's holding in *Brown* v. *Walker* has never been challenged; the case and the doctrine it announced have consistently and without question been treated as definitive by this Court, in opinions written, among other, by Holmes and Brandeis, JJ. See e. g. *McCarthy* v. *Arndstein*, 266 U. S. 34, 42; *Heike* v. *United States*, 227 U. S. 131, 142. The 1893 statute has become part of our constitutional fabric and has been included "in substantially the same terms, in virtually all of the major regulatory enactments of the Federal Government." *Shapiro* v. *United States*, 335 U. S. 1, 6. For a partial list of these statutes, see, id., at 6–7, note 4. Moreover, the States with one exception—a case decided prior to *Brown* v. *Walker*—have, under their own constitutions, enunciated the same doctrine, 8 Wigmore, Evidence (3d edition), section 2281, and have passed numerous statutes compelling testimony in exchange for immunity in the form either of complete amnesty or of prohibition of the use of the compelled testimony. For a list of such statutes, see 8 Wigmore, Evidence (3d edition), section 2281, note 11 (pp. 478–501) and supplement thereto, section 2281, note 11 (pp. 147–157).

We are not dealing here with one of the vague, undefinable, admonitory provisions of the Constitution whose scope is inevitably addressed to changing circumstances. The privilege against self-incrimination is a specific provision of which it is peculiarly true that "a page of history is worth a volume of logic." *New York Trust* v. *Eisner*, 256 U. S. 345, 349. For the history of the privilege establishes not only that it is not to be interpreted literally,[3] but also that its sole concern is, as its name indicates, with the danger to a witness forced to give testimony leading to the infliction of "penalties affixed to the criminal acts * * *" *Boyd* v. *United States*, 116 U. S. 616, 634. We leave *Boyd* v. *United States* unqualified, as it was left unqualified in *Brown* v. *Walker*. Immunity displaces the danger. Once the reason for the privilege ceases, the privilege ceases. We reaffirm *Brown* v. *Walker*, and in so doing we need not repeat the answers given by that case to the other points raised by petitioner.[4]

The judgment of the Court of Appeals is affirmed.

---

him while the statutory immunity forces him to supply evidence leading to an accusation and provides only a means for defense; that the statute puts a heavy burden on petitioner, if he is indicted, to prove that he had testified concerning the matter for which he was indicted; that a citizen is entitled to the very thing secured to him by the constitutional safeguards and not something which will probably answer the same purpose; that the statute subjects him to the infamy and disgrace from which he was protected by the constitutional safeguard; that the statute did not protect him from prosecution for a State crime; that even if it were so interpreted, Congress had no power to grant such protection; that the immunity granted was too narrow since it only extended to matters concerning which he was called to testify and not to all matters related to the testimony given; that to be able to claim the privilege the witness would virtually have to reveal his crime in order that the court could see that the statute failed to protect him; and finally that the statute was an attempt to exercise the power of pardon which was a power not delegated to Congress.

[3] "* * * the provisions of the Constitution are not mathematical formulas having their essence in their form; they are organic living institutions transplanted from English soil. Their significance is vital, not formal; it is to be gathered not simply by taking the words and a dictionary, but by considering their origin and the line of their growth." *Gompers* v. *United States*, 233 U. S. 604, 610.

[4] We do not discuss petitioner's argument, relying on the first amendment, that inquiry into his political membership and associations is unconstitutional. Petitioner contends that some of the questions which he was asked are objectionable because they require testimony that is protected by the implications of the first amendment. But it is every man's duty to give testimony before a duly constituted tribunal unless he invokes some valid legal exemption in withholding it. Although petitioner made the first amendment argument when the United States attorney applied, under the Immunity Act, for an order requiring him to testify, when he was cited for contempt he urged only "all of the grounds we urged before Judge Weinfeld in opposition to the statute, in support of our contention that the statute was unconstitutional. We will rest on that and proceed on that basis in the appellate courts." Petitioner did not make any objection to the questions other than the assertion of the unconstitutionality of the Immunity Act. It should also be noted that when petitioner—who, the record shows, was an experienced witness, had been advised by counsel especially experienced in this field, and was desirous of making this a test case—refused to answer the questions propounded before the grand jury the second time, he did not claim any privilege under the first amendment. His counsel, by way of dispensing with the reading of the minutes of what took place before the grand jury, stated that "the reason given for his refusal was that he feared the answers might incriminate him and he pleaded his privilege under the fifth amendment of the Constitution.

The Egyptian Dam

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 9, 1956

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to insert the following articles from the April 2 and 9 issues of Newsweek by Henry Hazlitt, entitled "That Egyptian Dam" and "More About Foreign Aid";

[From the Newsweek of April 2, 1956]

THAT EGYPTIAN DAM

(By Henry Hazlitt)

The proposal that the United States Government and its agencies pour hundreds of millions of our taxpayers' dollars into a grandiose dam in Egypt has at least one merit. It illustrates almost every bad principle involved in our foreign-aid program.

1. The High Dam at Aswan is to be more than 3 miles long, to cost $1.3 billion (at least half of Egypt's estimated national income), and to take some 15 years to build. Our proposed aid is called economic; but indirectly it is military aid. The less the Egyptian Government needs to lay out for its own dam, the more funds it will have left over for buying armaments. When the dam is completed it will no doubt supply power to create still more armaments.

2. This is one more plan for our Government to subsidize foreign state socialism. The Aswan High Dam is doubtless inspired by the Dneprostroi Dam and hydroelectric plant, the prewar pride of Soviet Russia, which also inspired our own TVA. The Dneprostroi Dam was not justified by economic results. (See Boris Brutskus, Economic Planning in Soviet Russia, 1935.) State-directed industrialization programs are usually disguised militarization programs.

3. One of the originally declared objectives of the Marshall and other foreign-aid programs was to combat communism. Yet this money and aid are to be given to a country that is buying arms from Communist countries and pursuing foreign policies that coincide with the purposes of those countries. One of the favorite arguments for our foreign aid is that it tends to halt communism by providing foreign countries with higher living standards. This is a naive belief. In the decade since the Second World War there is no evidence that higher living standards, when achieved, have been accompanied by marked decline in Comunist sentiment.

4. Our foreign-aid program, both directly and indirectly, tends to discourage and delay a return to the principles of free enterprise in foreign countries. We do not encourage free enterprise by subsidizing socialistic ventures. Moreover, when we so freely offer government-to-government loans or gifts we make it unnecessary for underdeveloped countries to undertake the reforms or give the assurances calculated to attract private capital, either native or foreign.

5. Another favorite argument for our foreign-aid program has been that it is needed to win allies. Experience daily shows, however, that our foreign aid often has precisely the opposite effect. The countries that are gravious enough to accept our handouts insist that there must be no strings attached. In plainer words, our money must be given to them unconditionally. In consequence, we have abandoned even the most essential conditions. Only a few days ago Secretary Dulles announced that "there is no connection whatsoever" between giving United States economic aid and securing United States allies. He went on to point out that Pakistan had security arrangements with the United States, but not India or Ceylon; yet all three are receiving United States aid. Our foreign-aid advocates begin to remind us of Santayana's definition of a fanatic—one who redoubles his efforts when he has forgotten his aim.

6. The administration cites the Aswan Dam project as an illustration of why Congress must give at least moral if not legal assurances that our aid will be continued over a period up to 10 years. But that project seems to illustrate precisely the opposite. If we commit ourselves to continued aid regardless of what policy the Egyptian Government follows, we lose whatever chance we might otherwise have of exercising any control for peace. Our one hope of retaining control would be to leave the Egyptian Government in constant doubt regarding the next year's handout.

Not that even this policy is here recommended. We have already thrown away the tremendous sum of $50 billion in foreign aid since the end of the Second World War. Judged by its originally declared objects, never has so much accomplished so little. It is sad to speculate on how much more we could have got for that $50 billion if we had been permitted to spend most of it at home.

[From Newsweek of April 9, 1956]

MORE ABOUT FOREIGN AID

(By Henry Hazlitt)

Last week I cited here the proposed Aswan High Dam in Egypt as an embodiment of the most dubious principles involved in our foreign-aid program. A foretaste of the probable consequences of financing this program by American fiscal agencies is supplied by what has already happened to the Helmand

Valley Irrigation Project in Afghanstan. The consequences of this were described by Peggy and Pierre Streit in the New York Times Sunday magazine of March 18. This is the largest American financed and constructed development in Asia. Conceived as a boon to the people of Afghanstan, it "has today placed a dangerous strain both on the Agfhan economy and on the nation's morale."

The project was envisioned as providing a firm water supply, hydroelectric power, flood control, and land development. The United States Export-Import Bank dropped loans of $40 million into it. But we have found no Afghans trained to operate it. The Afghan Government has found its share of the cost "a bitter burden that seriously threatens the Afghan economy." And there are many who think that the project "may have unwittingly and indirectly contributed to driving Afghanistan into Russian arms."

The previous history of our foreign-aid programs all over the world, in fact, raises the most serious questions about President Eisenhower's message asking for a total of $4.9 billion new foreign-aid appropriations for the new fiscal year:

1. "We cannot now falter in our quest for peace." We cannot. But this begs the real question at issue, which is whether our foreign-aid programs actually contribute to security and peace. We should not confuse obvious goals with dubious means. The most dangerous aspect of the foreign-aid program is that it creates the illusion we are "doing something," and diverts attention from the real measures that need to be taken. Do we solve every problem by giving away more of the American taxpayers' money?

2. "We must continue to stimulate expansion of trade and investment of the free world." Is a foreign giveaway program the sound way to do it?

3. "We have * * * no purpose to change their [other people's] chosen political, economic, or cultural patterns." Yet unless most of the governments to which we are giving handouts change from socialistic to free-enterprise policies, our help is worse than useless in bringing permanent improvements in living standards.

4. Asiatic and other nations "are striving to create the standards of living under which their economies can develop." A worthy goal. Any American who wishes to make a voluntary contribution to it is free to do so. But what is the ethical basis for the notion that our Government bureaucrats must force our taxpayers to turn over their hard-earned money to relieve foreign taxpayers and to raise foreign living standards? Why must we have a guilty conscience because we produce more than foreign nations?

5. "Military grant assistance is still necessary in most countries to assist them in maintaining equipment and replacing materiel lost by attrition. * * * Military assistance in Latin America should be continued where needed in order to provide standardized equipment," etc. Some nations are no doubt unable to manufacture their own arms. But why must United States taxpayers pay for the armament of other countries? Some areas, such as Korea and Foromsa, undoubtedly need our help. But most countries honestly determined to resist Communist aggression can afford to pay for their own armament. If they can't make it themselves, they can buy it from our Government, at cost.

6. The President's message mentioned that in the last 2 fiscal years there has been a "reduction in unexpended balances" for foreign aid of $2.5 to $3 billion. Yet as of January 1 last there was still an unexpended foreign-aid balance of $9 billion. Why didn't the President's message mention this amount also?

7. Is it either wise, or in accordance with the spirit of our Constitution, to ask one Congress to commit its successors to any long-term foreign-aid program?

Full Appropriation for Flood-Control Projects Are in the National Interest

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 9, 1956

Mr. DONOHUE. Mr. Speaker, at this time I should like to include the statement I presented before the House Appropriations Committee on March 28, 1956.

The statement follows:

STATEMENT OF HON. HAROLD D. DONOHUE, OF MASSACHUSETTS, BEFORE PUBLIC WORKS SUBCOMMITTEE OF HOUSE APPROPRIATIONS COMMITTEE AT HEARINGS ON NATIONAL AND NEW ENGLAND FLOOD-CONTROL PROJECTS CONTAINED IN THE PUBLIC WORKS APPROPRIATION ACT OF 1957, MARCH 28, 1956

Mr. Chariman and members of the committee, may I express my continuing appreciation of your courtesy in granting this opportunity to again appear before you at this hearing on the current public-works program, which, under the civil-functions section, includes appropriations for recommended flood-control and flood-protection projects within my area and the Nation.

Flood control and protection has, indeed, these past few years become one of our most pressing domestic problems, and the responsibility of the Federal Government to aid the various States and municipalities of the country in solving that problem is great. The extraordinary and unfortunate rapidity with which the ruinous visitations of the wildest elements of nature have followed one upon another throughout the country and, particularly in New England, has projected the imperative necessity of Federal legislation for assistance in flood control to the height of national and congressional consciousness.

I should like to take this moment to most sincerely thank the chairman and members of this committee, on behalf of my own people and I am sure the people of the country, for devoting so much of your personal and committee time, well beyond the usual hours, to patient, earnest study of this flood-disaster subject and your substantial action in attempting to conscientiously provide sufficient Federal money to grant help where it is needed. It is a trying and difficult job, as we, your colleagues, well know and you have been and are now discharging your obligation in an inspiring manner.

I last presented testimony to you during your January hearings on the urgent deficiency appropriation bill, which has now already passed the Congress. The sympathetic understanding you extended to those then coming before you pleading for protection of their people's lives and property and the speed with which this measure was handled is a historical tribute to the intense devotion to legislative duty of each and every one of you.

On this particular occasion, I come before you to plead for your approval of all the funds requested for the recommended projects already initiated and listed and to earnestly ask your further action in approving additional funds in contemplation of particular projects, vitally needed in my area and other areas of the country, which have not yet but may well be authorized before this Congress concludes. As you well realize, many earnest and worthy pleas for flood protection assistance have been placed before you without sponsorship understanding of the technicalities of our required legislative procedure. These people and the general public cannot be expected to know such technicalities of preliminary authorization, officially registered local willingness to participate, the required presurvey by the most efficient Corps of Army Engineers and other procedural standards that should be met before this committee and the Congress can properly consider them for approval. This is quite understandable and excusable because the general public has observed, during the frequent national disasters that have suddenly and violently struck so many areas of the country these past few years, the Army engineers and other executive department agency units move in very quickly and assist them locally. They do not comprehend that this assistance must legally be restricted mainly to temporary relief aid for the emergency protection of American lives and municipally owned public works and buildings. The general public appears, then, to be, unfortunately, under the impression that temporary emergency relief assistance by these Federal Government units is practically the same as Federal participation for permanent relief construction and Federal participation in permanent relief projects may be had by the presentation of a simple and informal request to Congress. In this respect, it would seem that our newspapers and other information agencies could help clear up much of this public misunderstanding by the printing of instructive articles prominently placed on repeated occasions. The newspapers of my home city and surrounding communities have done an excellent job on this score, and they could well be emulated in other sections of the country.

In any case, a great many individual bills for special projects, sponsored by a great many Members of this body on behalf of their people, are now before the House Public Works Committee, and it is possible that many of them may yet be approvingly acted upon. The objectives of these individual measures are as serious as life and death to the localities that will be affected, and it is for that primary reason that I solicit this committee to favorably consider the recommendation of appropriations even more than sufficient to cover all these projects; if the proposals are not eventually approved, nothing will be lost to the Government, while on the other hand, if they are approved and too much time elapses before a further appropriation, the Lord alone knows how many lives may be lost and how much property will be destroyed.

I am, indeed, here sympathetic with an understanding of the supplications of my colleagues from other sections of the country on behalf of the flood-control projects needed in their States, and I exhort your favorable attention to them. Quite naturally and humanly, I am, of course, primarily concerned here with the flood protection and control projects of vital importance to the continuing preservation of the lives and property of the people within my own State and area. Within these past 3 years, Massachusetts and New England have been visited in quick succession with an unprecedented series of unparalleled natural disasters. First it was tornadoes, after which came hurricanes, then ranging floods, and finally, three of the greatest blizzards in our history within 10 days. At this moment, in Massachusetts and New England, any quick thaw of the enormous amount of snow presently existing, and that is an ever-threatening danger during this season of changes, would be another major catastrophe, and we are just praying that the good Lord will protect us from any additional floods for which we are still seriously unprepared.

The list of particular flood control projects for Massachusetts which has been recommended by the Army engineers and cleared by the Bureau of the Budget is in your hands, and I am not going to intrude upon the time of this committee with repetitious recitation of the details of their urgency. That has been repeatedly and superbly done

already by my esteemed friend and distinguished colleague, Congressman PHILBIN, who has spoken to you on behalf of his own District and as chairman of the Massachusetts Delegation State Flood Control Committee. No one could present a more scholarly or more eloquent explanation than he has and the people of Massachusetts are indeed indebted to him.

He has explained to you the pressing need for the approval of planning funds for the Littleville, the Westville, and particularly, the West Hill Dam, known as the Blackstone Basin. I would like to be permitted to join in his appeal to you for planning funds for all these projects and especially the Blackstone Basin project which is designed to materially control the rising flood heights on the Blackston River, which is a recurring threat to the lives and property of the people affected by the river as it passes through the Massachusetts towns of Uxbridge, Millville, and Blackstone down into the State of Rhode Island. The people and the businesses in this area have experienced tremendous personal hardships and financial losses because of the repeated floodings and inadequate control barriers during the extraordinarily heavy rainfalls and excessive downward flow from water sources on the river above. This situation is of immediate urgency to thousands of residents and industries and eminently deserves the favorable consideration of your committee for planning funds leading to permanent corrective construction and, meanwhile, to permit the Army engineers to lend their assistance by prompt erection of some temporary controls or dredging.

With respect to my home city of Worcester, Mass., I especially desire to express to this committee the gratitude of myself and my people for your approval in the urgent deficiency appropriation of the sum of $60,000 to permit the Army Corps of Engineers to complete their resurvey of the Worcester diversionary tunnel flood-control project. In this program before you, there is included and recommended the sum of $840,000 to begin the construction of this tunnel next year. When I appeared before this committee last January 18, I presented a detailed explanation of the need and urgency of this flood protection project for the safety of the people of my city and area. I am not going to repeat all those details again now, but I would like to emphasize that the authoritative voice of the Army Corps of Engineers has been registered in recommendation of this tunnel as a vitally needed project. They have also testified to you that the project is of superior justification economically because the benefits that will derive are far greater than the cost and that the ratio of annual benefit to annual cost is high above the average that is required. Since the absolute need and the positive merit of the Worcester diversionary tunnel project remain unquestioned and it has received the preliminary approval of this committee, may I respectfully but earnestly ask your speedy approval of this appropriation for construction beginning, because without this continuing appropriation approval, your previous deficiency appropriation approval would be in vain, and indeed, in waste.

Mr. Chairman and members of this committee, there is indeed no need for me to attempt to dramatically exaggerate the effects upon my State of Massachusetts and the New England area of the natural disasters, particularly of floods, that have been visited upon us these past few years. The truth has been well publicized throughout the country and is impressive in its terribleness. The aftermath of the flood disasters alone in loss of lives, property damage, lost employment, and lost business is staggering to the imagination. Precise figures may never be established, but the financial losses are unquestionably in the billions according to authoritative accountants. The family tragedies through the loss of loved members will never be erased from our consciences if we do not take prompt, sensible steps to prevent death from striking down our people in this manner again, and that is the principal reason I am before you today, in discharge of my moral obligation as an elected Representative, asking for reasonable Federal assistance to my region.

The people of Massachusetts and New England have never evidenced any desire to be simple wards of the Federal Government, nor are we so doing now. We truly believe we have always contributed more than our full share, both in lives and material wealth, to the Federal Government for the general national welfare. It is simply and solely in recognition that our regional problem affects the whole national welfare that we are now asking Federal aid in our flood control and natural disaster problems. Our people can be counted upon now, as always, to exhaust the limit of their own initiative and resources in helping to solve their own area problems.

To extend Federal aid in this manner for this purpose is not in contravention of any congressional tradition or precedent. In my sincere judgment, the whole history of congressional action in relation to water control and waterpower impressively reveals the continuing congressional conviction and intent that our water resources should be developed and controlled in a manner to assure their greatest contribution to the national economic growth, strength, and general welfare.

In pursuit of that policy and intent the Congress has repeatedly demonstrated their belief that in any regional water control problem the Federal Government should assume a major share of responsibility when Federal participation is necessary to safeguard the national interest or to accomplish broad regional objectives of national import, where projects, because of size, complexity, or potential multiple benefits, are beyond the means of local communities and private enterprise. Within these principles of Federal Government activity, I believe the great regional New England water control problem lies; and the Federal Government must, with promptness, assume their moral, patriotic, and financial obligation in granting assistance for the solution of the problem.

The United States has granted, in Christian generosity, untold billions of needed aid to desperate people in foreign lands and as a Christian Nation we can be modestly proud of such action. It is, at the very least, a gamble on the side of God. However, the willing and patriotic taxpayers of our own country have a prior and predominant claim on the resources of this Government and it will be a national disgrace if the imperative and immediate needs of our New England and other flood-ravaged regions are not provided for with full Federal assistance before disaster comes again.

I thank the committee for their courtesy to me and demonstrated interest in my people. I know that you will give your utmost consideration to the merit of all the flood-control projects that are before you and that have been proposed. I earnestly hope you will see fit to recommend appropriations sufficient to cover them all and to insure their completion at the earliest practicable date in the national interest.

As Friends, It Is Our Duty To Be Blunt

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 9, 1956

Mr. DINGELL. Mr. Speaker, one thing which may well have escaped the attention of the people of this country is the attitude of the real friends of this country overseas on the announcement of his candidacy for reelection by Mr. Eisenhower.

The citizens of Great Britain, America's stanchest and truest friend and ally overseas, like our other friends, feel great concern over the possibility of having a sick, or incapacitated President to sit in the White House at a time when the vigorous leadership of America is vital to the free world.

A part-time President or one shielded from the immense pressure of duties demanded by that highest office and from the agonizing decisions which are the daily routine of the Presidency cannot lead America in the manner which our own people deserve or in a way in which our allies overseas must expect in our unending struggle with atheistic communism.

For the benefit of our people who might not have had access to it, or similar editorial expression by other newspapers of nations allied to the United States in the present cold war, I here insert into the RECORD a genuine expression of the apprehension felt by the British people, appearing on the front page of the London Daily Mirror of March 28, 1956, under the heading "As Friends, It Is Our Duty To Be Blunt," where the editorial staff expressed the fear and worry of the British people over the President's announcement that he would run again for reelection:

IKE, PLEASE THINK AGAIN—AS FRIENDS, IT IS OUR DUTY TO BE BLUNT

The decision most damaging to the Western Powers in 1956 was not made by an enemy of the West.

It was made by Dwight D. Eisenhower when he decided to seek reelection as President of the United States.

Today, 4 weeks after that decision, the melancholy news is that President Eisenhower has still not changed his mind.

The Mirror believes it is vital that he should stand down. Ike must not run again for President.

Six months ago Ike suffered an attack of coronary thrombosis. Now he is a man who has a big question mark over his health. He is a spent man.

HE OWES IT TO HIS FRIENDS

He is a part-time President who offers to carry on his job to oblige his friends of the Republican Party.

But Ike has a wider circle of friends—the countries of the Western Alliance. And he owes it to them to stand down before it is too late.

What right has a British newspaper to poke its nose into American domestic affairs?

Before the war, none.

Now, in these postwar years, every right.

Britain's interest are now riveted, for better or for worse, with those of America. America is the senior partner in the West. Britain is her most important ally. What affects America affects us.

And there is another reason.

We like Ike. Ike likes us. On V-day, over 10 years ago, he looked down at the crowds in Trafalgar Square and said:

"I'm a Londoner. I've as much right to be down in that crowd yelling as you have."

Today, as friends, we reserve our right to yell back.

We in Britain have put our old leaders out to grass. Churchill, at 81, is in retirement. Attlee, at 73, is in the House of Lords.

If Eisenhower becomes President for a second term he will be 70 by the time his term of office is over.

But let us be blunt. In his state of health, the chances are that he will be dead before that day comes.

In that event, under the American Constitution, his deputy will take over—a man who may be known throughout the United States, but who is not the tried and trusted leader of the Western Powers.

The West will be in the hands of an assistant.

POLICY IN THE DEEP FREEZE

There are crucial years. When Ike fell ill, America's world policy was put in the deep freeze. Now, because it is presidential election year, it is still gathering icicles. Must we risk that vital decisions will remain in the deep freeze because of the President's inactivity?

Unlike other objects placed in the fridge, policies will not keep.

Russia takes full advantage of the situation.

Bulganin, Khrushchev, Malenkov and Co. trot round the world as fit as bass fiddles. But Eisenhower cannot even undertake a whistle-stop tour of America.

Russia's leaders announce new polices. We are not quite sure what they are all about, but they have announced them.

What has America announced?

Practically the only news we have had from the White House in the past 6 months have been bulletins from Ike's vociferous quartet of doctors.

A BULLETIN FOR EVERY BIRD

When he had his breakfast, there was a medical report. When he played a record of "Davy Crockett," there was a medical report. When he went shooting quail and wild turkeys there was a bulletin for every bird that fell.

But there have been no bulletins about that ailing patient, western policy, whose condition is now so critical.

Eisenhower richly deserves a long rest after his illness and his years of devoted service.

The West deserves a United States President who can put all his strength into the word's most gruelling job. Sickroom statesmanship will not work in these vital years.

Dwight Eisenhower must think again.

Eisenhower Administration Ignores Warnings of Our Military Leaders

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 9, 1956

Mr. PRICE. Mr. Speaker, this administration has for the past few years displayed a peculiar aptitude of not appreciating Soviet technological achievements, or to intelligently measure and counteract rapid Soviet military advancements.

It is bad enough that the American people have been and are being hoodwinked and falsely informed of true Soviet capabilities. It is worse when this administration permits itself to be lulled into a feeling of complacency.

Mr. Speaker, this administration, by its shortsightedness and false budgeteering, is permitting this Nation's military strength to deteriorate to the point where we will have a second-rate Air Force. The warnings of our military leaders are being completely ignored.

Mr. Stewart Alsop, in an article in the New York Herald Tribune of March 28, has again clearly described the extent to which this administration has gone in its failure to truly appreciate the Soviet threat to this Nation's security.

Mr. Alsop quotes statements by Generals Twining, White, and Power to the effect that the Soviet Union is rapidly outstripping the United States in strategic airpower. Why, asks Mr. Alsop, why do their warnings and the additional warnings of General LeMay, of the Strategic Air Command, go unheeded?

The plain fact—

Mr. Alsop says—

is that the American Government has officially decided to permit the Soviets to outstrip this country in strategic airpower. Many people refuse to worry about this decision, because Dwight D. Eisenhower is head of the Government. But General Eisenhower's own military experience was in a different field, and he himself has often disclaimed personal infallibility.

Mr. Speaker, I feel that I am only doing my duty in calling the attention of my colleagues to the frank admissions of these several Air Force generals which are at such strange variation with the decision of the administration. Public apathy in the face of sensational warnings from the highest authority raise the question of public responsibility.

Mr. Speaker, I believe that the warnings of our military leaders, as reported by Mr. Alsop, must be given the highest degree of consideration. For this reason I am happy that our colleague from Pennsylvania has inserted the Alsop article in the CONGRESSIONAL RECORD. It appears in the RECORD of March 28, 1956, on page A2739. I urge every Member of the House to give his attention to the remarks of Mr. FLOOD.

Hoover Commission Report

EXTENSION OF REMARKS
OF
HON. CHARLES RAPER JONAS
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 9, 1956

Mr. JONAS. Mr. Speaker, under leave to extend my remarks, I include the following editorial recently published in the Charlotte News, afternoon newspaper of Charlotte, N. C.:

HOOVER REPORT AND OKINAWAN DOGS

The Charlotte Lions Club recently heard a speaker says the Hoover report, far from being a monument to the past, is a blueprint for a better tomorrow. That it is, but the blueprint is more than a little smudged by disuse, and dusty blueprints are just as useless as bespattered monuments.

The speaker, of course, wanted to use the blueprints. He was Albert W. Highsmith, a Durham native, now organizational director of the Citizens Committee for the Hoover Report.

The simple purpose of this group is to familiarize the public and an extensively inattentive Congress and administration with the vast tax savings that could be had by putting the reports to work.

Fortunately, Mr. Highsmith has some disciples in Charlotte, and they have a leader—Attorney Carlton Fleming. These people are eager to shake the dust off the Hoover report. They will arrange for speakers for civic and church clubs, parent-teacher associations, and any other groups interested in introducing some simple economy and efficiency to the Goliath of Government whose tribute comes due on April 15.

What they want to talk about is not the complexities in the 3,300,000 words in the far-ranging report. They want Charlotteans to understand the avoided simplicities.

Such as these:

Adoption of the Hoover report could save a citizen earning $4,000 a year as much as $32 in income tax. It would keep 159 tax dollars in the pocket of the man earning $10,000.

It would install systems to eliminate such bureaucratic silliness as air shipment of dog food to Okinama, pingpong balls to Berlin, and 25,000 pounds of cement to Bermuda.

The Hoover report originated in a bipartisan group. Most of its recommendations are noncontroversial. Some can be implemented by Executive order; others require legislation. All are aimed at streamlining Government so that it will cost less and work better.

Through lethargy, inaction, and an ingrown tolerance of waste, the dust has been allowed to settle. The local group should be congratulated for trying to unsettle it.

They will be successful if enough citizens lend an ear.

Foiled Again

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 9, 1956

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks I include an editorial entitled "Foiled Again," appearing in the Boston Traveler of April 6, 1956. The decision of the examiner, on the face, is decidedly inconsistent with the policy of the Civil Aeronautics Board, as well as with the best interests of New England.

The editorial follows:

FOILED AGAIN

The decision of a Civil Aeronautics Board examiner to deny a bid by Northeast Airlines to extend its routes to Florida should be resented deeply throughout New England.

Fortunately, this was the recommendation of but one examiner. The whole thing will now be taken up by the full board. There are many good reasons why the examiner's recommendation should be ignored.

First of all, the recommendation went against the policy of the CAB. That policy is to strengthen smaller trunk lines to insure that they will be able to operate without subsidy even during periods of economic adversity, and so they will be able to compete effectively with larger carriers.

Well, Northeast Airlines, a New England carrier, certainly falls into the category of a smaller trunkline. It operates with a subsidy, and unless it is allowed to expand it will never be able to compete effectively with larger carriers.

Northeast Airlines performs a valuable service to New England air passengers, shuttling them back and forth from New York and to points throughout New England. It also runs to Montreal.

But when it comes to bidding for the more profitable long runs, such as that to Florida, Northeast is stymied and ignored.

Northeast's inability to carry New England passengers through to Florida is already of major interest to this area. Any passenger who is forced to change planes or terminals in New York knows why. But the possibility that Northeast will not be allowed to extend its lines is of even greater interest. If the line finds that it is unable to keep up its New England service, who would take over that service? Certainly none of the larger carriers now enjoying the cream of the routes.

Finally, the examiner's recommendation is in direct conflict with the recommendation of the CAB's counsel, V. Rock Grundman.

Grundman pointed out during a CAB hearing in December that Northeast needs to extend its routes in order to "enlarge its competitive opportunities in line with the Board's objective of developing a sound national route structure."

"The grant of its (Florida) application will accomplish this result," he said.

What all this means is that the CAB examiner, against all the weight of testimony, policy, and evidence, would let Northeast strangle and let New England air travelers go hang.

Northeast President George E. Gardner says he'll fight the recommendation. He deserves the support of our congressional delegation, our chambers of commerce, and anyone else who wants New England to stay on the aviation map.

Now the Cold War of the Classrooms

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 9, 1956

Mr. PRICE. Mr. Speaker, under leave to extend my remarks, I herewith include an article written by Hon. William Benton entitled "Now the Cold War of the Classrooms," which appeared in the New York Times magazine on April 1, 1956. Mr. Benton, a former United States Senator from Connecticut, is the publisher of the Encyclopedia Britannica. He visited the Soviet Union last fall to prepare a report on Communist indoctrination behind the Iron Curtain for the 1956 Britannica Book of the Year.

The article follows:

NOW THE COLD WAR OF THE CLASSROOMS
(By William Benton)

Leon Bloy, the French philosopher, once referred to what he called "the good news of damnation." His theory was that none of us might behave as Christians if we were not afraid of perpetual hellfire.

My recent trip to the U. S. S. R. suggests that the Soviet educational system can prove to be the good news of damnation for American education—the spur which may rouse us and propel us toward salvation. If so, this will sustain Arnold Toynbee's thesis that the competition provided by the Soviet system will force us to live up to our own great ideals.

Technical experts form the Soviet Union's "gold reserve," Premier Nikolai Bulganin told the recent Communist Party Congress in Moscow. Further, 4 million new specialists are to be trained before the current 5-year plan ends in 1960; this exceeds the combined output of the 2 previous plans.

Nikita Khrushchev, party chief, shouted at the Burmese in December: "We shall see who has more engineers, the United States or the Soviet Union." He and Bulganin offered to build and staff a technological institute in Rangoon "as a gift to the people of Burma from the people of the Soviet Union."

This is the new cold war of the classrooms. And it is very dangerous. I have seen for myself the vast technocratic Sparta that is burgeoning in the U. S. S. R. I have talked to the topmost Soviet educators. I returned convinced that Russia's classrooms and libraries, her laboratories and teaching methods, may threaten us more than her hydrogen bombs or guided missiles to deliver them.

The new propaganda of the Kremlin, emphasizing economic, political and ideological competition, clearly reveals the long-range Soviet plan—a plan so potent as to make military and political maneuvering seem by comparison tactical and even diversionary. Central to it is the schooling for export of scores of thousands of indoctrinated and capable engineers, scientists, schoolmasters and technicians of all kinds. These are being trained to help develop the resources of countries outside the present Soviet orbit and to help convert the world to communism. The advance guard is now in India, to which a technical institute has also been offered; and enticing inducements have recently been advanced to Egypt, Afghanistan and Latin America.

Even more formidable is the spectacular example set for underdeveloped countries by the Soviet Union's mass-training for its own industrial needs. For without the present outpouring of trained experts within the U. S. S. R., the sixth 5-year plan could not promise by 1960 a 60-percent increase in the national product of the U. S. S. R. and a 70-percent step-up in its heavy industry.

If we Americans are now complacent about our own educational problems, at a moment when whole galaxies of our own educational neglect are coming, into head-on collision, then we stand in mortal danger of being outwitted, outtalked, outmaneuvered, and outbuilt throughout the world. We are not preparing to cope with the surging flood of youth that looms ahead, demanding to be educated. The Soviet threat may now be the only thing that can shake us out of our sleepwalk—on the educational brink.

What is it that most impresses a foreign observer about the Soveit school system? In less than 40 years, starting with a population about 50-percent illiterate, the Soviets have built a 7-year primary school system rivaling our own in universality, with nearly 100 percent enrollment.

Since World War II, the Soviet secondary school system has muchroomed amazingly. By 1960 the basic 10-year school is to be compulsory everywhere. In spite of acute labor shortages, all children are to be kept in school from 7 to 17. Every Russian youngster is to be given an education—a Communist education of course, but comparable in its high standards of study and learning to an English public school or a French lycée, though without the same emphasis on the humanities.

Further, the U. S. S. R. is on the road to surpassing the United States both in the number and percentage of students enrolled in institutions above the secondary level. Indeed, when high-level extension-correspondence students are included, the Soviet total of 4,300,000 enrolled in 1955 is already 70 percent over our 2,700,000. The Soviet Union offers as much training to every boy and girl as his or her talents and abilities will absorb.

Russian youngsters today go to school 6 days a week, and more hours per day and more weeks per year than ours do. Discipline is strict, study hours are long, the curriculum is demanding, and examinations are severe. At all levels the Soviet students, like European students in general, work much harder than do our American youngsters.

Wearing military-looking uniforms, Soviet children for the first 4 years of the 10-year school concentrate on reading, writing, arithmetic, and Russian. In the last 6 years more than 40 percent of their time goes to science and mathematics. During these years they must take algebra, geometry, and trigonometry. Also compulsory are 4 or 5 years of physics, 4 years of chemistry, 2 years of biology, a year of astronomy, and a year of psychology.

Finally each student is supposed to take 6 years of a foreign language. English, the new language of science, is said to be the favorite in the U. S. S. R. Russian is favored in the satellites.

The contrast with our American secondary school curriculum is starting. Lewis L. Strauss, Chairman of the Atomic Energy Commission, recently told the Thomas Alva Edison Foundation: "I can learn of no public high school in our country where a student obtains so thorough a preparation in science and mathematics, even if he seeks it—even if he should be a potential Einstein, Edison, Fermi, or Bell." Indeed, last year, for the 28,000 high schools of the United States, we produced only 125 new teachers of physics. I repeat—only 125.

When I was in Moscow last fall Pro-Rector Vovchenko, of the University of Moscow, told me that, above the 10-year schools, there are now more than 2,000 "tekhnikums." Later I learned that the number probably exceeds 3,500. These have an enrollment of 2½ million students. We in the United States have no parallel for them. They are a kind of vocational college, giving 2½- and 4-year courses. They produce "middle-trained" specialists in scores of fields. I visited a tekhnikum for the coal-mining industry in Kiev, and was astonished at the extent and value of its equipment.

Then there are the 800 institutions of higher Soviet education. Thirty-three of these are universites. The balance are the specialized institutes for doctors, engineers, lawyers, aeronautical experts, electrical specialists, agricultural experts, etc.—all the specialized skills in such demand throughout the world. The universities concentrate largely on the training of teachers, scientists, scholars, and professors. All universities and higher institutions provide 5-year programs, except the pedagogical institutes, which are 4 years, and the medical, which are 6. These top institutions have an estimated enrollment of 1,825,000 students.

Eighty to ninety percent of all students at Soviet higher institutions have been on State scholarships. which included stipends risng slightly from year to year. In February we learned from the party congress that beginning this autumn all education is to be free. Every Soviet student can now keep going upward in the Communist world at the state's expense so long as he can make

the grades. Indeed, he is pushed, prodded, pressured, and enticed to reach the limit of his capacity for training.

The University of Moscow, dominating the city with its gleaming new 33-story central tower dedicated to the sciences, enrolls 23,000 students. The recent investment of 3 billion rubles for this new building, completed in 1953, is astounding by our standards. It is equivalent to at least $150 million. Thus this buildng costs more than has been spent for the completed physical plant of all but a very few American universites.

It contains 1,900 laboratory rooms. Here work most of the 2,000 professors of the University of Moscow who teach students. Here, to, are the 500 scholars dedicated to research from whom no teaching is expected. Original and creative research is demanded from all 2,500.

Pravda recently reported that 60 million are enrolled in educational courses, including those taking evening and correspondence courses. For most students, of course, graduation from a 10-year school or tekhnikum marks the end of formal education. But many continue to struggle and strive for another chance and still another.

This is why one sees teen-agers in bookstores buying books on nuclear physics. This is why in the Leningrad library I found every desk occupied in the great science reading room. The silence was absolute; the concentrated zeal of the students was breathtaking. I asked my librarian guide, "Are these university students?" He replied, "Oh, no; the university has its own library; these are workers from the night shifts of the factories; we keep the library open at night for the day-shift workers."

The Soviet educational system has, of course, grave and tragic weaknesses by our standards and goals. There is no academic freedom or tenure for teachers or professors. No criticism of the regime, or of official dogma, is permitted. Classroom discussion is not encouraged. Heavy emphasis is given to rote memorization of texts.

Every advanced student must devote his full time to his specialty except for 10 percent to the study of dialectical materialism and Marxism-Leninism-Stalinism. The student can't change his mind about his profession in midstream; he can't shift. Every graduate must work for 3 years on any assigned job in his specialty.

By our standards, the Soviet system is the training and conditioning of human instruments, rather than the education of human beings. It is designed to sharpen human tools for coming 5-year plans, rather than to develop Soviet youngsters to their highest powers as individuals. It is without human spirit or soul. It is the gospel according to Pavlov.

But I fear the Communists may have found a formula for combining high quality in scientific and technological training and research with an acceptance and obedience in political, economic, philosophical, and moral matters. Whether this formula will hold up over the decades may turn out to be the crucial question of our historical epoch.

The third generation, for whom Lenin said "two whole generations" must be sacrificed, is now coming up. I talked with 40 or 50 key administrators of the current generation, most of them men in their forties. They struck me as men of ability and energy, men who rise to the top in any mobile society. They seemed to me dangerously dedicated men—true believers in communism, and frighteningly ignorant of the West, of its system of values, and of its hopes and aspirations.

They went out of their way to talk to me—not about Stalin or even about the present regime—but about the beauties of dialectical materialism and the progress that is being made toward world acceptance of Marxism. Leninism and Stalinism. This last standardizing trio of words seemingly is about to be condensed into Marxism-Leninism, but we shouldn't take encouragement from this recent revelation that there has been latent opposition to Stalin. For many years interviews with intellectual refugees from the Soviet Union have revealed more evidence of unhappiness over "miscarriages" under the Communist system itself. Surprisingly to many, even the refugees from the U. S. S. R. haven't complained too much about the nature of the Communist regime.

Some of the figures I have quoted above were given me by the top Soviet school officials among the men I interviewed. They may exaggerate. But my checks do not prove the figures invalid. I suggest that we would be wise to accept them. Americans have for years scoffed at Soviet claims—only to find that they have outstripped all nations but ourselves in industrial production. The Communists from the earliest days gave up butter for guns; but they gave up meat for education.

How can we meet this new Soviet challenge?

First, we require a generous program of scholarships and fellowships for students of more than ordinary promise who need help. This should be launched at once, both by government and by private philanthropy.

Our high schools abound with talent worthy of such scholarships. Secretary Folsom of the Department of Health, Education, and Welfare recently cited an estimate that "each year about 60,000 students of high quality drop out of high school before graduation * * * and half of the students in the upper one-fourth of their high school classes do not go on to college." Dael Wolfle, of the American Association for the Advancement of Science, tells us that 150,000 pupils from each age and class who could enter the important specialties fail to go to college. These figures show the tragic waste of our talented youth—our own potential manpower.

The frantic competition for engineers now going on in the United States has been reported on the front pages of the New York Times. Our industries and our Defense Establishment require at least 45,000 to 50,000 new engineers a year. We graduated 23,000 in 1954 (compared with Russia's 53,000 that year and 63,000 in 1955).

There is also a scramble for physicists, chemists, and mathematicians. These shortages have obscured the swelling demand for professional and technical experts in many other fields. At the rate we are growing, we can expect shortages of at least 22,000 physicians and 100,000 nurses by 1960. The shortage of teachers may be the most acute of all.

We in this country must begin to educate more scientists and engineers, and we must learn to do it without turning our schools into tekknikums, or our colleges into factories for producing highly conditioned robots.

I feel that the Federal Government should immediately launch a national competitive scholarship program beginning with as many as 20,000 scholarships a year, each covering 4 years of college. I would increase this as rapidly as the administration of the program, and the absorption capacity of the colleges and universities permitted, to a level of at least 100,000 scholarships a year. To these should be added 20,000 or more graduate fellowships.

Such a program could require a Federal outlay of perhaps $1 billion a year. But Mr. Bulganin's figure of speech about his "gold reserve" is apt. Trained manpower is like money in the bank. It is our most important national resource.

The second priority is for a program designed to attract and hold the finest instructional corps in the world. That means the development, without delay and on a bold scale, of new incentives for teachers.

Perhaps the second priority provides us with the key question in two parts: First, how can we offer greater incentives to the talented public school teacher, and to every teacher who successfully seeks self-improvement; and, second, what system of incentives will tempt and hold young prospective teachers of talent? I do not see why we should greatly step up the salaries of hundreds of thousands of teachers who are inferior and who will continue to be inferior. Indeed, one of our national tragedies is that our teachers colleges do not attract a better caliber of students.

Here again, I fear, we must turn to the Federal Government for leadership. Hundreds of millions of dollars are required at once, to be allocated through State departments of education to communities which undertake to attract and keep uncommonly promising teachers. Further, the Federal Government must help establish a pattern of standards. This will cause a hue and cry about Federal control. We must face up to it.

This brings me to the third requirement, the dilemma of the physical plant. The urgent need is for $3.8 billion a year for the next 10 years if we are to obtain the 950,000 new classrooms required for the public schools.

Because State and local community outlays for school construction are now at a $2-billion-a- year level, leaving a gap of $1.8 billion, the $250 million offered annually by the present administration, or even the $400 million of the Kelley bill are far too little.

Fourth, and finally, we must reexamine our teaching methods, and our institutional setup. In the latter category are such questions as the need for more junior colleges, 50 percent of which are today in California.

As to teaching methods, I shall cite only a single example. Our goal of secondary school pupil-teacher ratio has been 25 to 1; in the university it has been 12 or 13 to 1. These goals now seem to be about to vanish. Soon we shall receive the tide of 42 million school children.

We must bring technology to the schools. For example, all plans for new buildings should make it easy for children in Maine and Kansas to learn history and science and arithmetic from the Californian or the Britisher who understands them best and can explain them best through films and educational television. One good teacher, with a couple of aids, can learn how to take care of 200 or 300 pupils—and improve the instruction. This makes it profitable as well as easy greatly to raise salaries in order to attract and hold good teachers.

After 26 years of pioneering effort the classroom film producers of the United States haven't yet put a projector into more than 1 out of every 50 classrooms. By contrast, the U. S. S. R., once it began to use classroom films has made rapid progress. The goal of a projector in every classroom has not yet been achieved in the U. S. S. R. But at present rates of progress the Soviets will achieve this a decade before the United States has a projector in every school building.

If we compare the Soviet educational system with our own, it is clear that we can lose the race if we continue to waste our potential talent. But it is also clear we cannot win it on our terms on numbers alone. Our best opportunity lies in educating whole men, rather than mere functionaries. Obviously, America must make a larger investment in training for science. At the same time our technical experts must be educated in the liberal arts. They must under-

stand the history and logic of our great traditions of freedom and justice.

Recently, Marion Folsom said, "Education is basic * * * to our collective strength in the cause of world peace."

Soviet Russia may be the first country to develop free and unlimited schooling for all with talent who are willing to work hard. But we in the United States have tended a brighter fire during the last 180 years. That is our dedication to the advancement and perfection of the individual. It should be far more appealing to all mankind if we now begin to do a better job of building the fire to a blaze.

Education is one area where we in America most surely have nothing to lose if we accept the Red gantlet. Intercontinental competition in education need be no challenge to an arms race or a war. If the Russions goad us to do a better educational job, then we shall only be doing what our own best traditions call for—what we should be doing even if the Soviet Union were to sink suddenly into the sea.

Rural Public Library Services

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 28, 1956

Mr. BYRD. Mr. Speaker, under leave to extend my remarks, I wish to insert a letter which I have received from Mr. Arthur V. Smith, editor of the Postmasters Gazette, Pascagoula, Miss. Mr. Smith's correspondence constitutes a good statement in support of pending legislation concerning rural public library services.

The letter follows:

POSTMASTERS GAZETTE,
OFFICE OF THE EDITOR,
Pascagoula, Miss., March 26, 1956.

Hon. ROBERT C. BYRD,
House Office Building,
Washington, D. C.

DEAR MR. BYRD: May I commend you for your remarks, titled "The Need for Rural Public Library Services" that appeared in the CONGRESSIONAL RECORD of March 22.

I presume that your remarks had reference to H. R. 2840 of the first session of the 84th Congress, which I have been watching with great interest and in which those people of Mississippi who are interested in the bill's objectives would like to see enacted into law.

For many years I have been on the Pascagoula Library Board, and when Jackson County created a separate board to give county-wide service, I became a member of that, too. The two boards work together, pool their book purchases, and maintain a public library in Pascagoula. Eventually they will merge under State laws which we hope to have enacted.

During my years as a member of the city board I have amended my thinking to favor expansion of countywide library service with bookmobile rather than erecting and maintaining a monumental building in Pascagoula, the county seat. That is our policy now, and it is working wonderfully, so well that our elected county governing officials, who at first were skeptical about using public money for traveling libraries, are now about ready to give further aid. We can never reach the maximum needs without substantial outside help, and H. R. 2840 will give this.

I agree with you that this type of service for rural areas "diffuses information and ideas necessary to the welfare and future advancement of a community," and that it "provides for a constructive, sensible method to strengthen this democratic bulwark of education that will not strain the purse."

The bill before the Congress is well drawn, does not call for a large appropriation of funds, and will demonstrate to local people the basic worth of far-flung library service.

I am not commenting on this bill without a knowledge of the background for its need. For nearly 20 years I edited weekly newspapers in this county, and for 8 years I served in the State legislature. I know our rural people, the help they must have, their desires and their quick acceptance of educational opportunities. I also know Mississippi and its people, and that few counties in my State are so fortunate as Jackson, and most lack the taxable wealth to do what we have done. In studying rural library service, I have my own experience as a public library educated person; and I have visited rural areas in northern Georgia and western Kentucky to see the effects of the first attempts of bookmobile operation. The coming of the rolling library has done almost as much for these isolated areas as the agricultural extension forces and the public schools. I have also visited and studied the very old and well established public library systems in the States of Vermont and New Hampshire, and to a lesser extent in your own State of West Virginia.

In this aid to our rural libraries and the opportunity it gives to a most important segment of our population to share in the cultural attainments of our civilization I see one of the most constructive and cementing forces of our Republic. I must regretfully admit that there are many thousands of people in the South, white and black, who need broadened enlightenment. They are capable and desirous of assimilating knowledge that will make them better equipped for life, and I also think that if they are given the opportunity they will become the country's strongest bulwark against any subversive encroachment upon our Government.

Sincerely yours,
ARTHUR V. SMITH,
Editor.

Congressman Clyde Doyle, 23d District, California, Again Reports to the People

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 9, 1956

Mr. DOYLE. Mr. Speaker, I thank you and all of my distinguished colleagues for previously extending me unanimous consent to make these remarks. It is a time-honored custom, a very important and valuable custom, for Members on both sides of our political aisle to make such reports directly back to the people we represent in this, the "greatest legislavite body in the world's history." I consider it as my report of my stewardship, of my trusteeship for the people of the congressional district I represent during this, my fifth elective term, in the House of Representatives.

Heretofore on the following dates, I have also sought to report to the people I represent what I could, within the limits allowed by House rules as to time and space, on May 9, 1946, on April 28, 1952, on May 10, 1954. On those dates I made similar reports. Very many of my constituents thanked me and have asked for a report to date. Now, as before, no tax money will pay for the printing of the several thousand copies which will be furnished to the people of the great 23d District, Los Angeles County, Calif. I again repeat what I stated in the CONGRESSIONAL RECORD of April 28, 1952, to wit:

The strength of our democracy and the American way of life depends upon the extent to which the American people know the facts about, as Abraham Lincoln said, "A government of the people, by the people, and for the people."

To the people of the 23d Congressional District, Los Angeles County, Calif.:

MY DEAR FRIENDS AND NEIGHBORS: I am pleased and proud to give to you this necessarily brief report of some of my work as your Representative in the House of Representatives, 84th Congress, to April 9, 1956, as follows:

My district and Washington, D. C., office open weekdays for your assistance.

My district office, situated in the Post Office Building, Huntington Park, has been open week days, excepting Saturday afternoons. Miss Ida Reynolds has been in charge, ably assisted by Mrs. Bess Prusso and Mrs. Fannie Leonard. They do whatever is necessary to aid and assist the people in the district, for the Congressman. This is my district staff. My Washington, D. C. office, at 1030 House Office Building, has likewise been open daily, ably staffed for several years now by Miss Margaret Tucker, assisted by Mrs. Nell Talbert. This is my staff here at the Capitol. Since it is generally known that my good wife, Lydia (with whom I observed our 42d wedding anniversary March 21), has materially helped me all these 10 years that I have now served in Congress, it appears pertinent to report that she has never been on the Government payroll. We did not come to Congress to increase our income.

THREE MAIL DELIVERIES DAILY; HEAVY

It averages about 35 letters, numerous printed reports, circulars, postcards, magazines and communications from foreign countries, newspapers, several telegrams, current communications from colleagues and executive agencies, local and long distance phone conversations, etc.

I maintain my 10-year-old habit of reading every first class communication. Frequently I begin this before 8 a. m. Of course, when I am away from the Capitol on official committee work for several days, I cannot personally read and answer them until I return. If you take time to write me as your Congressman, I am glad to take time to personally read and answer it.

I AM ON TWO MAJOR COMMITTEES

As in the 83d Congress, I again serve on two standing committees; both recognized as of major importance; to-wit, Armed Services Committee (35 members), and Un-American Activities Committee (9 members). Since both these committees must often meet the same day and hour, I necessarily miss attendance upon one or the other. Since I preside as subcommittee chairman frequently, I must be there in person. However, I am pleased to report to you that, out of 191 meetings of the Armed Services Committee, I only had 43 absences and these on account of other committee work. The committee clerks advise me my attendance is rated excellent.

I HAVE MADE SPEECHES

My 17 speeches in Congress and the 72 remarks all appear in full in the CONGRESSIONAL RECORD for the day occurring. Senators are seldom limited as to time. House

Members always have their time fixed before they begin.

NINETY-SEVEN NEIGHBORS FROM 23D DISTRICT VISIT ME

Already this session 97 residents of the 23d District have honored my office, and made me very happy, to have them personally call upon me here at my Washington office. I invite all who come this way to do so. Bring your school and college students, too. Many other folks from California, not residents of the 23d District, also called.

I HAVE SERVED HUNDREDS OF CASES OF WORTHY PEOPLE AND BUSINESSES

More than 200 specific cases of service rendered, many of them involving matters of vital concern to the persons or the businesses (both small and large). In addition, many hundreds of requests for particular information, documents, copies of bills, reports, etc., have been promptly complied with. Hundreds of clubs, chambers of commerce, business and professional groups and committees, churches, patriotic and fraternal orders, etc., have rightfully asked and been cordially served.

TWENTY-THIRD DISTRICT BOYS KEPT AT ACADEMIES

I have actively and cordially cooperated with every boy who was physically and scholastically qualified to try the Academy exams. I am very proud of all the boys, both those who made the grade, and those who will try again. Yes, also of those who tried and failed. I invite any 23d District lad who has the ambition, to let me hear from him; always with the knowledge and consent of parents.

I HAVE COOPERATED WITH SCHOOLS

As in previous years, I have again been pleased to be called upon by most of the school districts in the matter of their need for the prompt receipt of their full entitlement of Federal funds under applicable public laws. These school-district officials always have their applications in tiptop shape, when the mail brings them here. They have received a very substantial sum of many thousands of dollars.

I HAVE COOPERATED WITH VETERANS

I consider it a high honor to be called upon so often by an increasing number of individual veterans and veterans' representatives and organizations. Also, the veterans' service centers at Compton and Huntington Park, in their splendid work, frequently have had my help whenever they have asked it. They do very valuable work.

I PLACED CONGRESSIONAL RECORD IN ALL LIBRARIES

So that the most people in the 23d District could have easiest access to the daily work in Congress and better know what I, as Representative, do and say and how I have voted, too, I had the RECORD placed in all the public libraries, high-school and college libraries from the very first. I'll keep them coming there as long as I am in Congress. Only an informed democracy can act intelligently.

I FILED HELPFUL PRIVATE AND IMPORTANT PUBLIC BILLS

Six private bills were authored by me for the benefit of persons in the 23d District. Eighteen public resolutions were filed by me. Since this 84th Congress is only one-half through, I cannot now report what the final tally may be by July. But I am proud to report that the Doyle resolution, H. R. 151, passed the House unanimously on March 23, 1955. This did away with one-man investigative committees in the House. It requires at least two committee members present. I am also proud to report that the President of the United States did a few weeks after I had filed two other Doyle resolutions to amend the Constitution of the United States make public statements supporting the principle and objective contained in said two proposals by me made. The President did not refer to my resolutions in any way whatsoever. He may not even have known of them.

I HAVE PRESIDED AS TEMPORARY SPEAKER

As in previous Congresses, Hon. SAM RAYBURN, Speaker of the House—longer so than any man in history—has placed me in his chair, both as Speaker and also as Chairman of the Committee of the Whole. It is always a thrill, naturally.

THE ELDER CITIZENS ARE MY CONCERN, TOO

Even if the span of life in the United States had not already measurably increased, just American humane considerations compel us to arrange so that our increasing number of elder citizens shall not become economic liabilities. I have supported broadening social security, increased elder citizens' pensions, reduction in age to receive social security, increase in amount allowable to earn.

The spirit of people of our Nation constitutes the indestructible wealth of our Nation.

I HAVE SUPPORTED STRONG NATIONAL DEFENSE

My guide or thought for each day as your Congressman is as follows: "I daily work and pray for a safe and sound America in a world of enduring peace."

I close each letter with that sentence, before I sign my name. I mean it. But, my friends, with the world as it has been reported, to be, I would not have felt I was doing my duty to you—and all the people of our beloved Nation—if I had neglected to vote for funds necessary to keep our country strong enough militarily to resist possible military aggression. But military defense is not the ultimate solution.

It now costs each American family about $105 a year, and President Eisenhower has recently asked a sum from Congress which will increase that to about $125 per year, per family.

I HAVE FREQUENTLY SENT NEWSLETTER TO YOU

Almost every week until recently when my work load was too much to continue it for a time, I have sent to all the newspapers in the 23rd district a brief newsletter from my desk. It has been nonpartisan. I thank the press for whatever use they have been able to make of it for the information of their readers about Congress. For a few months I have sent home, free, a monthly "newsletter." If you want to also receive it, I'll honor your written request for it.

I DID NOT COME HOME FOR EASTER RECESS

Naturally, I would like to have come home. I was advised that all but two California Congressmen had gone home "to see how matters stood politically, etc." But, I felt it necessary to remain in Washington, D. C., and do two important official pieces of work which could not wait until Easter recess ended, to wit:

1. Work on a few cases which only I, as Congressman, could be effective in, and which could not well wait.

2. Prepare to act as subcommittee chairman, beginning April 16th at Un-American Activities Committee hearings at Los Angeles Federal Building for several days. To be chairman of such an important hearing is considerable of a responsibility in the fight against subversive communism, wherever it raises its ugly head.

Whenever there is a primary election in any State, all Members of Congress are excused to return to that State in ample time to protect their own "political status" in their respective Congressional Districts. No roll call votes are taken on the primary election date. So, on June 5 comes the primary election in California. No doubt almost all of the 30 Congressmen from California will have been excused from the Halls of Congress so they could come home in due time to campaign a bit for their own reelection. I expect to be home for at least a few days and to personally cast my vote at South Gate. Mrs. Doyle will vote by absentee ballot.

I HAVE EXPERIENCED GREAT EVENTS AND MET GREAT PEOPLE FOR YOU

My membership on the Armed Services Committee has occasioned my witnessing outstanding and inspiring events in connection with our National Security and National Defense. From the supersonic wind tunnel to being submerged off the Atlantic seaboard on the nuclear submarine *Nautilus* for over 12 hours; to cruising on the supercarrier *Forrestal;* to witnessing atomic tests and seeing one "guided missile" "hit the mark" over 10 miles in the sky; to eating luncheon at the White House with the President (before his heart attack) to being present as great foreign nation leaders speak to us in Congress—these and other moments are all occasions when I would be most happy if you and each of you in the great 23d District, could also share the experience.

I often say that our Nation deserves the best of whatever we are.

I HAVE BEEN FAITHFUL IN FLOOR ATTENDANCE AS WELL AS COMMITTEE ATTENDANCE

I was either personally present on every "yea" and "nay" rollcall vote, or paired on every "yea" and "nay" roll call vote from the beginning of the 84th Congress to the date of this "report." As heretofore stated, my official duties as a member of the Armed Services Committee and the Un-American Activities Committee, on occasions takes me away from the Capital to other parts of our Nation during the time Congress is in session, on account of important official subcommittee work which it is required to do in connection with our legislative responsibilities. But, on such occasions I have always been able to arrange to be paired on any vote when I was necessarily personally absent. To date there have been 88 "yea" and "nay" rollcall votes. I was necessarily absent on 13 thereof but was paired on everyone of the 13. As to quorum calls (which are not voting occasions) there have been 80 to date. I necessarily missed 17 during the 1st session of this 84th Congress; I have not missed any quorum calls in this second session. The missed quorum calls were occasions for the same reasons which obtained in the manner of the "yea" and "nay" rollcalls. I have never been absent from attendance upon the floor of the House, or upon a committee meeting, nor in answer to a "yea" and "nay" rollcall vote, or a quorum call, or any other congressional duty or responsibility on any occasion during the almost 10 years I have already served in Congress on account of sickness or illness of any sort. I make this frank and full accounting to you of the same as I do of my discharge of every other official responsibility as your Representative in Congress.

I HAVE PERSONALLY TESTIFIED BEFORE CONGRESSIONAL COMMITTEES

For instance, I personally appeared and testified before the Post Office and Civil Service Committee of the House, in support of a reasonable increase in pay for the postal workers. Committees set definite dates when Members of Congress will be heard by the committee on pending legislation.

I HAVE KEPT A DIARY OF CONGRESS FOR 10 YEARS

Again during all of this 84th Congress I have daily kept a brief diary of important happenings and events occurring on the floor of Congress. Speaker RAYBURN, Majority Leader MCCORMACK and Republican Leader Martin have told me that such a diary has never been kept by any Member of Congress within their knowledge. I was able to fre-

quently accept invitations to speak to community groups, patriotic organizations, churches, lodges, Y. M. C. A., etc., about Congress.

Space prevents my visiting with you on other subjects which I should like to talk with you about in this report. But, whatever you have in mind to have me tell you about, please write me—or better yet—look me up when I am home this summer and give me the benefit of your opinion on it.

With kind regards to each of you and looking forward to again meeting you whom I already know and you whom I also wish to meet and know, I have the honor to be,

Your Congressman,

CLYDE DOYLE,
23d District, California.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided,* That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.
